NSE EGR trades hit record 2.27 lakh units on Dhanteras

Asian News International
New Delhi

The National Stock Exchange of India (NSE) registered its highest-ever trading volumes in the Electronic Gold Receipts (EGR) segment on the occasion of Dhanteras, marking a major milestone for the country's organised bullion market. Festival trading in the exchange-traded instrument touched 2,27,692 units, establishing a new record for the segment, according to the NSE.

NSE EGRs offer investors an exchange-traded, dematerialised way to hold gold, and are subject to regulatory oversight and standardised clearing and settlement mechanisms. They also help channel domestically available physical gold, including recycled supplies, into the formal financial system.

Can Samvat 2083 sustain the rebound?

STAYING GROUNDED. History offers hope of recovery, but global risks and weak market breadth call for caution

Kumar Shankar Roy
bl. research bureau

A spectacular late rally has revived hopes for Indian equities this Deepavali. The Nifty 50 surged over 9 per cent in seven sessions, aided by softer crude, foreign buying and hopes of easing geopolitical and trade tensions after the US mid-terms. Yet, the rebound has failed to erase the losses incurred over the past year.

The benchmark has slipped 3.15 per cent since Deepavali last year (October 20, 2025), marking its weakest festival-to-festival performance since 2011. The broader Nifty 500 declined 1.1 per cent.

Can the next Samvat sustain the recovery? History offers hope, but geopolitical tensions, AI bubble concerns, elevated global bond yields and stretched domestic valuations pose risks. domestic valuations pose risks.

An analysis by *bl.portfolio* of Deepavali-to-Deepavali market performance since 2000 shows that negative years have frequently been followed by gains. The notable exceptions were three consecutive periods — from Deepavali 1999 to Deepavali 2000, 2000 to 2001, and 2001 to 2002 — when the Nifty declined 8-13 per cent in each period. This was followed by a strong recovery.

The Nifty surged 58.19 per cent between Deepavali 2002 and Deepavali 2003, and an extraordinary 91.53 per cent between Deepavali 2008 and Deepavali 2009, as markets rebounded from the global financial crisis. More modest recoveries of 9-10 per cent followed the declines in the Deepavali periods ending in 2012, 2016 and 2023.

The Nifty 500 also rebounded in five of six completed instances, gaining 100.76 per cent between Deepavali 2008 and Deepavali 2009. Such recoveries offer encouragement, but are no guarantee of a similar outcome.

REASONS FOR OPTIMISM

The latest market rally has brought a sharp turnaround in sentiment. The Nifty gained 8.58 per cent in the week ended November 6, its strongest weekly performance in nearly six years.

Lower crude prices, renewed overseas buying and changing global expectations have supported the rebound. The correction in global technology stocks has also raised the possibility of investment flows rotating towards other markets, including India, although sustained inflows are far from assured.

Domestic institutions provided another cushion. FIIs withdrew about ₹2.76-lakh crore between Deepavali 2025 and November 5, 2026, while mutual funds invested ₹5.37-lakh crore through November 4. In the preceding festival-to-festival period, FII outflows were ₹1.48-lakh crore against MF purchases of ₹4.74-lakh crore.

VALUATIONS & RISKS

NSE data show the Nifty 50 trailing P/E ratio contracting by over 9 per cent, from 22.72 to 20.65 times. The Next 50, Midcap 150 and Microcap 250 saw sharper P/E compression of 17-20 per cent, despite posting positive index returns, indicating an improvement in underlying earnings relative to prices. However, cheaper need not mean cheap. The Smallcap 250's P/E actually rose from 30.77 to 31.99 times.

The sustainability of any domestic market rebound will depend substantially on corporate profit growth, which, in turn, will be influenced by geopolitical developments and the trajectory of AI investments.

A recovery accompanied by stronger earnings and stable valuations would offer firmer support than one driven primarily by renewed investor enthusiasm.

The biggest immediate uncertainty may come from overseas markets. The sharp correction in US technology stocks has raised concerns over whether massive AI investments can generate sufficient returns. A deeper sell-off could trigger foreign outflows, currency volatility and dampen investor appetite for emerging-market equities, including Indian stocks.

Elevated US bond yields, amid inflation and fiscal concerns, could put pressure on equity valuations and foreign fund flows. A spike in crude oil prices or worsening geopolitical tensions could also fuel domestic inflation and constrain monetary easing.

While valuations have moderated from their earlier excesses, the key question is whether they are attractive in a world of persistently higher interest rates and geopolitical uncertainty.

The domestic market also presents a more uneven picture than the headline indices suggest. Against the Nifty 50's 3.15 per cent decline, the Next 50 gained 3.18 per cent, the Midcap 150 rose 1.58 per cent and the Smallcap 250 advanced 1.27 per cent. Microcaps led the gains, rising 5.42 per cent.

Sectoral performance was sharply divided. Pharma and metals gained over 24 per cent each, while capital-market stocks advanced 22.1 per cent. FMCG fell 17.3 per cent and IT lost 6.6 per cent, extending their declines from the preceding year.

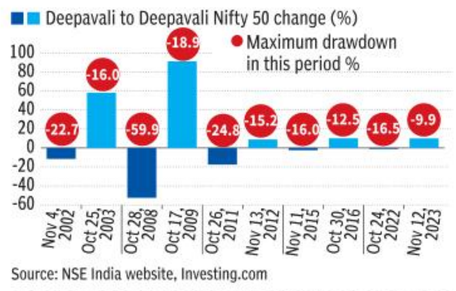

But these pockets of strength conceal considerable stock-level damage. An examination of 481 stocks in the current Nifty 500 universe found that 272, or 56.5 per cent, posted negative returns. As many as 129 stocks lost more than 20 per cent, while the median stock declined 5.15 per cent, nearly five times the benchmark's 1.09 per cent decline.

History also suggests that recovery years can test investors' patience. In the five positive years following negative Nifty returns, the benchmark experienced maximum peak-to-trough declines ranging from nearly 10 to 19 per cent. The median drawdown was over 15 per cent. The period from Deepavali 2025 to the present saw a maximum drawdown of 15.56 per cent, even though the index ended the regular trading week ahead of Deepavali 2026 just 3.15 per cent lower.

The outlook for the next Samvat is cautiously encouraging, though risks from an AI-led global sell-off, rising bond yields, foreign selling and earnings disappointments remain. History offers hope, not a guarantee of recovery. Chasing prices after a sharp rally could prove costly. The lesson from last Samvat is clear: valuations matter.

INVESTMENT. FOCUS

Muhurat Stock spotlight: Zensar Technologies

Gurumurthy K
bl. research bureau

Based on the charts, the long-term outlook for Zensar Technologies (₹568) is bullish. The stock has formed a strong base above ₹400, with a double-bottom pattern visible on the chart. This is a bullish reversal pattern.

The stock faces resistance around ₹640, which it could test in the short term. Chart analysis indicates a good chance of the stock breaking above this level. Such a breakout could trigger a fresh rally towards ₹1,000-₹1,100 over the next four-six quarters. Long-term investors can consider investing in Zensar Technologies at the current market price of ₹568.

Investors can also consider accumulating the stock on dips to ₹530. Place an initial stop-loss at ₹360. Trail the stop-loss to ₹620 once the share price rises to ₹730. Raise it further to ₹760 and ₹920 when the stock touches ₹880 and ₹990, respectively. Exit the stock at ₹1,050.

The bullish outlook will be invalidated if the share price falls below the crucial support level of ₹380.

Delhi tops global pollution chart ahead of Deepavali

SMOG BLANKET. A view of South Avenue and Vijay Chowk amid smog, as Delhi's AQI stood at 392, in the 'very poor' category, according to the CPCB, in New Delhi on Saturday ANI

Our Bureau
New Delhi

Just a day before Deepavali, Delhi earned the dubious distinction of being the world's most polluted city on Saturday morning, according to Swiss group IQAir's live ranking.

The Air Quality Early Warning System for Delhi forecast that the city's air quality index (AQI) could deteriorate from the 'very poor' to the 'severe' category.

According to Reuters, IQAir ranked Delhi first among the world's major cities at 10.35 am (0505 GMT), with a US AQI reading of 581, nearly double Lahore's 285. IQAir's reading, based on concentrations of air pollutants, is not directly comparable with India's official index, which follows a different scale and methodology.

The Central Pollution Control Board (CPCB) recorded Delhi's AQI at 363 at 10 am on Saturday, placing it in the 'very poor' category. The city's 24-hour average AQI stood at 382 at 4 pm on Friday.

SEVERE AIR QUALITY

Of the 59 air quality monitoring stations in the city, 18 recorded AQI levels in the 'severe' category on Saturday morning. The Air Quality Early Warning System for Delhi also forecast that the overall AQI could enter the 'severe' category during the day.

Several weather stations recorded a slight dip in minimum temperatures. Safdarjung, considered representative of Delhi's weather, recorded a minimum of 16.2 degrees Celsius, 1.9 degrees below normal and one degree lower than Friday.

CURBS ON VEHICLES

The Delhi government on Saturday announced that it would enforce an annual ban on vehicles below BS-VI emission standards registered in other States and Union Territories from November 1 to January 31.

The restriction will also cover buses operating under the All-India Tourist Permit and other service regimes.

Hind Coca-Cola Holdings files for IPO

Meenakshi Verma Ambwani
New Delhi

Hindustan Coca-Cola Holdings Ltd (HCCH), the parent company of Coca-Cola's India bottling arm Hindustan Coca-Cola Beverages, has filed draft papers with SEBI to raise funds through an initial public offering (IPO). The proposed IPO will be entirely an offer-for-sale of up to 99.75 crore equity shares of face value ₹10 each by promoter Hindustan Coca-Cola Overseas Holdings Pte Ltd, according to the draft red herring prospectus. The equity shares are proposed to be listed on BSE and NSE.

Currently, Coca-Cola through Hindustan Coca-Cola Overseas Holdings Pte. Ltd., holds 60 per cent of HCCH, while Jubilant Beverages Limited holds the rest.

HCCH, which operates through its material subsidiary HCCB, is the largest bottler within the Coca-Cola System in India based on units of concentrate sold. For the three-month period ended June 30, the company's retained units recorded revenue from operations of ₹4,310.17 crore, up 20.46 per cent YoY, while total sales volume grew 18.61 per cent.

Kotak Mahindra Capital, Citigroup Global Markets India, JP Morgan India, Morgan Stanley India Company, Axis Capital Ltd, Goldman Sachs (India) Securities and IIFL Capital Services Ltd are the Book Running Lead Managers to the IPO. KFin Technologies is the registrar.

'India a structural bull market at a valuation discount'

Mahesh Ravidas Nayak
Mumbai

Nilesh Shah, MD, Kotak Mahindra AMC

India continues to attract strong global investor interest, but the investment case is increasingly shifting from chasing outsized returns to benefiting from long-term compounding, said Nilesh Shah, Managing Director, Kotak Mahindra AMC. Shah said global investors remain actively engaged with India, with several institutions already committing capital and others evaluating allocations.

REASONABLE VALUATIONS

Shah described India as a "structural bull market available at a cyclical valuation discount," arguing that investors can today access India's long-term growth story at far more reasonable valuations than during the market's peak exuberance. "Compared to where valuations were two years ago, investors are effectively buying India nearly 30 per cent cheaper today," he said.

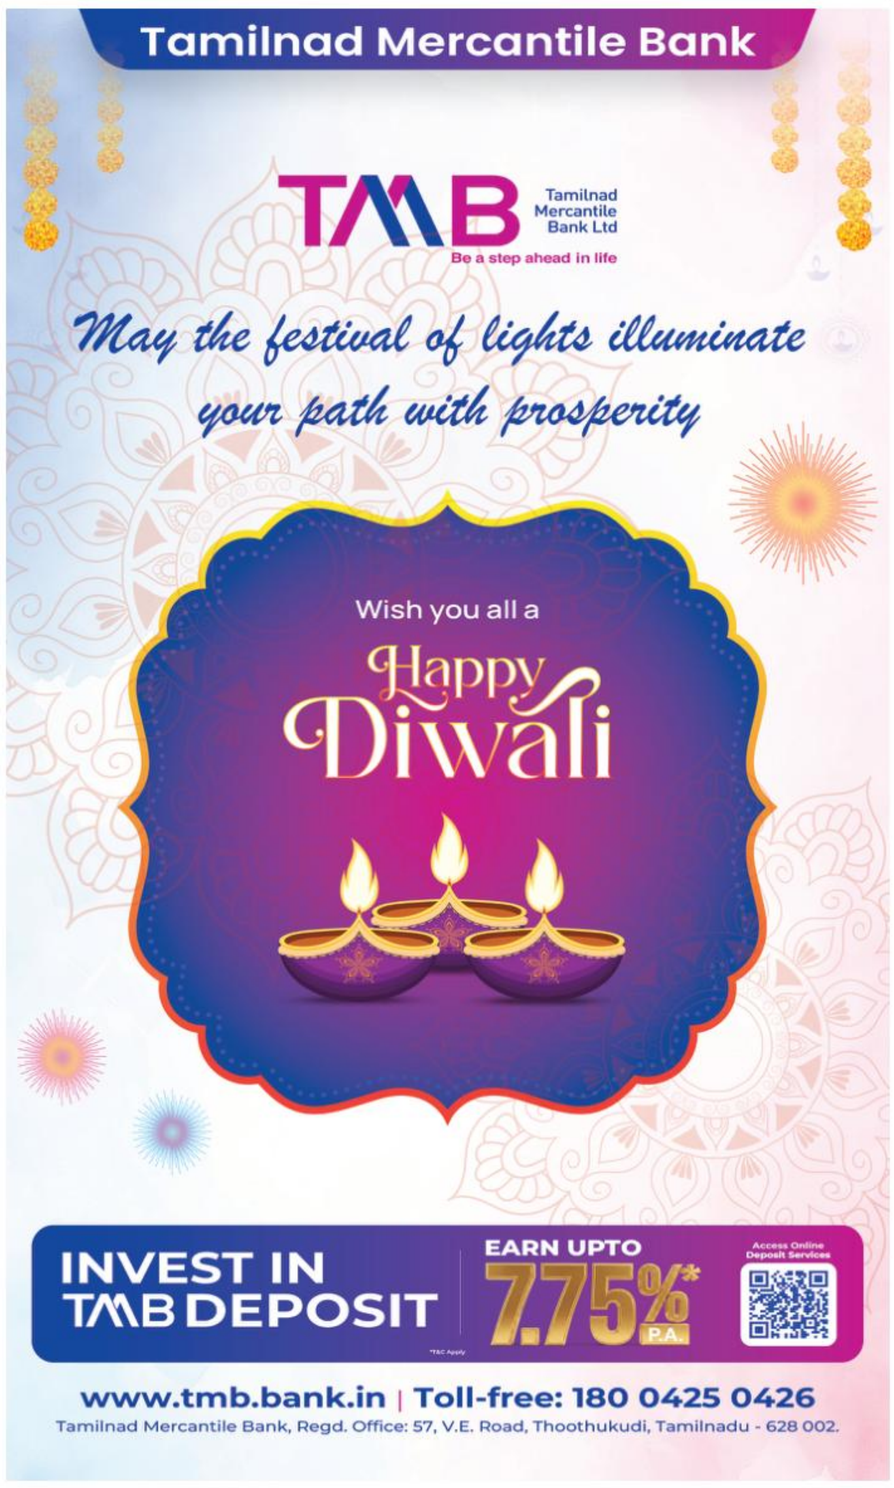

However, he cautioned against unrealistic return expectations. "If you're expecting 30 per cent annual returns, India is not the market for you. But if you're looking for high-single-digit to low-double-digit compounding over a decade, India remains one of the best investment opportunities globally."

According to him, India remains attractive due to resilient earnings growth, strong domestic participation and the potential return of foreign portfolio flows as investors rotate out of crowded AI trades and back into emerging markets. Among the key opportunities, Shah highlighted banking and financial services, premium consumption and modern manufacturing. He also expects the upcoming 8th Pay Commission to boost discretionary spending across automobiles, travel, consumer durables and hospitality.

GOING FORWARD

As for the next market triggers, Shah pointed to the implementation of the 8th Pay Commission, a turnaround in foreign inflows, healthy corporate earnings growth and tax-policy reforms. Calling for greater consistency in taxation, he argued that the coexistence of securities transaction tax (STT) and long-term capital gains (LTCG) tax creates distortions.

"STT was introduced in lieu of capital gains tax. From an investor's perspective, one of them should go". Shah expects FY27 earnings growth of 12-15 per cent for large-caps, 20-25 per cent for mid-caps and 15-20 per cent for small-caps. He added that while India can sustain 5-7 per cent growth, achieving double-digit expansion will require reforms in land, labour and ease of doing business.

MARKET ACTION.

4 hybrid funds to consider this Deepavali

MIDDLE PATH. Here are diversified strategies for you to manage volatility and cushion market declines without missing the next equity rally

GETTY IMAGES

Dhuraivel Gunasekaran
Kumar Shankar Roy
bl.research bureau

Each Samvat comes with its own lessons, and the one to take away from Samvat 2082 is the need for asset allocation. From Trump's tariff wars and the West Asian conflict to crude oil shocks, record FPI selling and AI-led disruption, Indian equities have faced one challenge after another highlighting the need for a diversified portfolio.

For investors, the dilemma is whether to invest now or wait for better prices. Given the importance of taking forward the lessons on diversification, hybrid mutual funds offer a middle path.

We have selected **four funds** from distinct hybrid categories. Aggressive hybrid funds maintain high equity exposure, while balanced advantage funds dynamically adjust equity and debt allocations. Equity savings funds combine unhedged equity, arbitrage and debt, while multi-asset funds diversify across at least three asset classes. Each offers a different balance of growth potential and downside protection. The funds have been shortlisted after evaluating a combination of factors, including performance across market cycles, risk-adjusted returns, downside protection, portfolio composition, investment strategy, fund management approach and consistency of returns.

Equity savings, balanced advantage and multi-asset allocation funds can be considered for lump-sum investments, given their diversified portfolios and mechanisms to manage equity exposure. Investors can also invest through SIPs to spread purchases over time. For aggressive hybrid funds, which carry higher unhedged equity exposure, SIPs or staggered lumpsum investments may be more suitable in the present environment.

Investors must choose according to their risk appetite. investment horizon and individual circumstances.

Kotak Aggressive Hybrid Fund

Staying the course in a changing market

KEY POINTS
- Notable mid- and small-cap exposure
- Active debt portfolio
- Consistent long-term performer

For investors with a moderate risk appetite who are wary of market volatility, aggressive hybrid funds allocating 65-80 per cent of assets to equities and the remainder to debt, help cushion downside risks while retaining the potential to participate in upswings.

The ₹9,040-crore Kotak Aggressive Hybrid Fund has consistently outperformed its category. Launched in November 1999, its direct plan has delivered a seven-year CAGR of 15.2 per cent, against the category average of 13.4 per cent.

Over the past three years, equity exposure has ranged between 69 per cent and 80 per cent, and currently stands at 75 per cent. The fund favours cash-generating businesses that can finance growth internally, avoiding excessive debt or equity dilution. Companies diversifying into unrelated businesses are avoided. The focus is also on businesses with visible, sustainable earnings growth over the next three-four years.

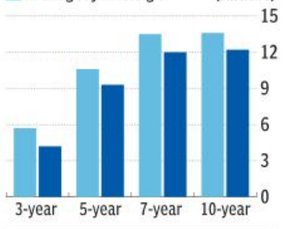

As of September 2026, 39 per cent of the equity portfolio was invested in large-caps and 33 per cent in mid- and small-caps. This mix has remained broadly consistent, though relatively high mid- and small-cap exposure can add to portfolio risk.

Sector positioning favours structural growth themes over cyclical and commodity-driven segments. Banks, financial services and retail are among its top three sector exposures.

On the fixed income side, the fund follows an active, dynamic-duration strategy. Macaulay duration has ranged from 3-9.6 years over the past three years and currently stands at 3.3 years. The fund largely avoids credit risk, with lower-rated exposure limited to around 1.3 per cent in AA-rated bonds. As of September 2026, the debt portfolio's yield to maturity (YTM) was 6.6 per cent, against the category average of 7.3 per cent.

Five-year rolling returns over the past seven years averaged 17.8 per cent annually, outperforming category's 16 per cent. Returns ranged from 10.2 to 26.8 per cent. The fund's seven-year SIP return of 13.5 per cent outpaces the category average of 12 per cent. Its five-year SIP return of 10.6 per cent also beats the category's 9.3 per cent. The fund's base expense ratio is 0.45 per cent for direct plan.

5-year rolling returns

Asset break-up (%)

Note for all fund charts: The rolling return charts illustrate the fund's performance based on 5-year rolling returns calculated from the last seven years NAV history, highlighting the minimum, average, and maximum returns achieved over these periods. Source: ACEMF Value as of Nov 4, 2026

Mirae Asset Equity Savings Fund

A measured approach to wealth creation

KEY POINTS
- Strong five-year rolling return consistency
- Controlled equity exposure limits volatility
- Large-cap bias supports portfolio stability

Mirae Asset Equity Savings's combination of unhedged equities, arbitrage opportunities and high-quality debt provides scope for reasonable long-term returns while keeping risks relatively contained.

The nearly eight-year-old fund's latest portfolio has 38.7 per cent in unhedged domestic equities, 28.2 per cent in hedged equities, 18 per cent in corporate debt, 9.7 per cent in government securities (G-Secs) and 5.5 per cent in cash equivalents.

The unhedged equity portion provides exposure to market upside, while arbitrage positions seek to capture price differences between cash and futures markets without taking substantial directional equity risk. Debt investments provide stability and accrual income.

The ₹1,994-crore fund does not take aggressive equity calls. Its net equity exposure has historically remained within a relatively narrow band of 36-45 per cent. Changes in allocation are guided by a valuation framework comparing prevailing market P/E and P/B multiples with their long-term averages. This approach reduces dependence on tactical market calls.

The fund's long-term performance provides considerable comfort. Its mean five-year rolling return stands at 12.03 per cent, with the maximum and minimum returns at 17.04 per cent and 8.29 per cent, respectively. This places it among the stronger performers in the equity savings category. The relatively healthy minimum return is particularly noteworthy.

The fund has also delivered a seven-year SIP return of 10.23 per cent, comfortably ahead of the category average of 8.74 per cent. Its five-year SIP return of 9.14 per cent likewise exceeds the category's 7.82 per cent.

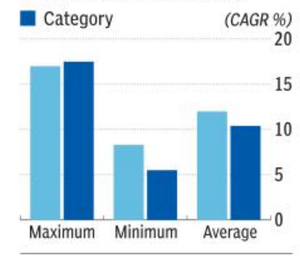

The equity portfolio follows a predominantly growth-oriented investment approach, emphasising sustainable earnings expansion, sound balance sheets, management quality and reasonable valuations. A significant large-cap bias helps contain volatility.

On the debt side, the fund favours G-Secs and highly-rated corporate bonds, while maintaining relatively moderate interest-rate sensitivity. This limits the need to chase higher yields through excessive credit or duration risks. A horizon of at least three-five years is preferable for investment. The scheme enjoys equity fund taxation. Its base expense ratio for direct plan is 0.31 per cent.

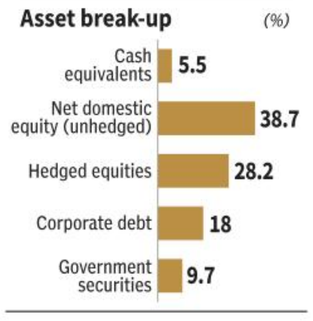

SIP returns

5-year rolling returns

Asset break-up (%)

ICICI Prudential Balanced Advantage Fund

A model-led de-risking strategy

KEY POINTS
- Valuation-oriented asset allocation
- Counter-cyclical investment approach
- Short-term-oriented debt portfolio

Balanced Advantage Funds dynamically adjust equity and debt allocations based on indicators and proprietary models. The ₹71,913-crore ICICI Prudential Balanced Advantage Fund is among the category's top performers. Launched in December 2006, its direct plan has delivered an annualised return of 11.8 per cent over seven years, against category average of 10.8 per cent.

It follows a counter-cyclical asset allocation strategy, combining a proprietary quantitative model for determining net equity exposure with fundamental stock selection and derivative-based hedging.

The in-house model recommends net equity levels, which are reviewed and rebalanced daily. Market valuations, particularly price-to-book ratios, carry the highest weight. Other inputs include interest rates, bond yields, the rupee's movement against a basket of currencies and Brent crude prices.

While permitted to maintain net equity exposure between 0 per cent and 100 per cent, the fund has historically operated within a 30-80 per cent range. When markets rally and valuations become expensive, the model signals a reduction in equity exposure. Corrections and attractive valuations prompt higher allocation.

Gross equity exposure is maintained above 65 per cent for equity-oriented taxation. When the model recommends lower net exposure, derivatives bridge the difference. Instruments include stock and Nifty futures, Nifty put options, Bank Nifty derivatives and covered calls.

The portfolio is relatively large-cap oriented, reflecting the fund's large size and mid- and small-cap liquidity constraints. It also favours consumer-facing (B2C) businesses. The fund is currently overweight autos, retail and internet, and underweight cement, oil and gas, and banking and financial services.

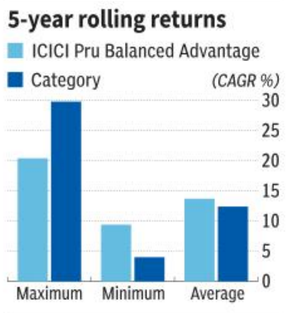

The debt portfolio follows a flexible, actively-managed approach. Macaulay duration has ranged from 0.7 to 4.1 years and currently stands at 4.1 years. As of September 2026, yield to maturity was 7.5 per cent, against the category average of 7.1 per cent. Its non-AAA allocation currently stands at 5 per cent.

Five-year rolling returns over the past seven years averaged 13.7 per cent annually, outperforming the category's 12.4 per cent. Returns ranged from 9.4 to 20.4 per cent. The fund's seven-year SIP return of 11.3 per cent comfortably beats the category average of 9.8 per cent. Its five-year return of 9.9 per cent also outpaces the category's 7.9 per cent. The scheme's base expense ratio for direct plan is 0.71 per cent.

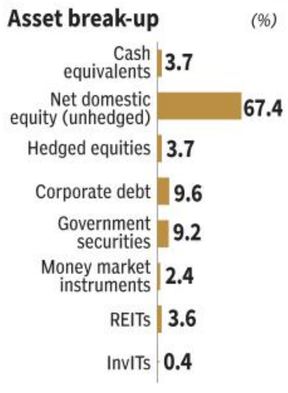

SIP returns

5-year rolling returns

Asset break-up (%)

WhiteOak Capital Multi Asset Allocation Fund

Diversification beyond equities

KEY POINTS
- Dynamic allocation across multiple assets
- Good three-year performance vs. category
- REITs and InvITs diversify income sources

When equities, bonds, gold and other assets move in different directions, deciding where to invest can be difficult. WhiteOak Capital Multi Asset Allocation Fund seeks to address this challenge through a diversified portfolio that dynamically shifts investments across asset classes based on their relative attractiveness.

Launched in May 2023, the ₹9,111-crore fund has built an impressive performance record in a relatively short period. Unlike schemes that follow a relatively fixed asset mix, WhiteOak uses a proprietary model to dynamically allocate money based on relative valuations and changing market conditions.

An important differentiator is the breadth of its investment universe. While some multi-asset funds concentrate largely on domestic equities, debt and precious metals, WhiteOak can also invest in overseas equities, commodity derivatives and listed real estate and infrastructure trusts. It uses exchange-traded commodity derivatives to gain exposure to precious metals, allowing greater flexibility in deploying capital. Its allocation model seeks opportunities across these avenues rather than relying on any single asset class to drive returns over an entire market cycle.

The latest portfolio has 27.8 per cent in unhedged domestic equities, 22.97 per cent in corporate debt, 10.6 per cent in gold, 11.1 per cent in REITs and 9.5 per cent in InvITs. G-Secs, money market instruments and cash equivalents account for much of the remaining allocation.

The relatively-modest unhedged equity exposure reduces direct dependence on stock market movements. Gold provides diversification, while REITs and InvITs offer exposure to income-generating real estate and infrastructure assets.

The equity portfolio has a pronounced large-cap tilt, with large companies accounting for about 73 per cent of equity holdings. Mid-caps contribute around 12 per cent and small-caps 15 per cent.

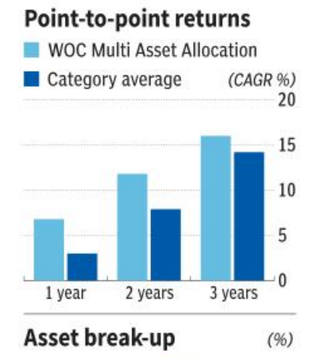

The combination of assets with different return drivers can help moderate portfolio fluctuations. However, REITs, InvITs and gold carry their own valuation, interest rate and market risks.

WhiteOak has delivered a three-year CAGR of 16 per cent, outperforming the multi-asset category average of 14.25 per cent. Its one-year return of 6.82 per cent also exceeds the category average of 3.05 per cent.

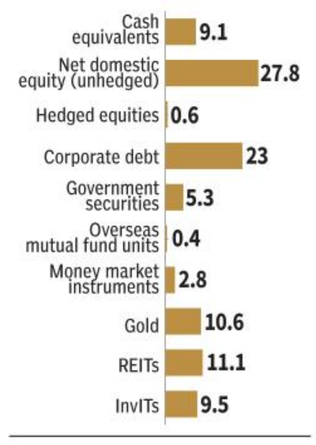

The fund's three-year SIP return of 11.92 per cent compares favourably with the category average of 8.19 per cent, suggesting that systematic investors have benefited from its diversified approach.

The fund can be considered by investors seeking long-term wealth creation through exposure to multiple asset classes within a single scheme. A minimum investment horizon of five years is preferable. The fund's base expense ratio for direct plan is 0.39 per cent.

MFs recast portfolios in Samvat 2082

MIX N MATCH. A study of 576 active equity schemes reveals shifting stock preferences, profit-booking and fresh bets

Dhuraivel Gunasekaran
bl. research bureau

KEY INSIGHTS

- New listings attracted widespread interest
- Strong rallies prompted profit booking
- Managers accumulated some beaten stocks

The period between Diwali 2025 and Diwali 2026 proved challenging for Indian equity fund managers, with markets delivering largely subdued returns amid considerable volatility.

Yet, investor flows remained robust. Actively-managed equity funds attracted net inflows of ₹5.2 lakh crore during this period, while their combined assets under management increased from ₹31 lakh crore to ₹35.4 lakh crore. Against this backdrop, fund managers did not remain passive. They reshuffled portfolios, adding exposure to select stocks and sectors while trimming positions in others.

We analysed 576 actively-managed equity schemes across categories such as large-cap, mid-cap, large- & mid-cap, multi-cap, small-cap, flexi-cap, sectoral and thematic funds, ELSS, focused, value and contra funds. A comparison of their October 2025 and September 2026 portfolio disclosures reveals key trends.

MOST FRESH ADDITIONS

The fresh-additions data highlight the extent to which fund managers ventured into recently-listed and newly-available investment opportunities over the past year. Billionbrains Garage Ventures led the list, finding a place in 129 schemes. Among mid-caps, Meesho entered 85 portfolios and Lenskart Solutions 76. In the small-cap segment, Tenneco Clean Air India attracted 69 new scheme additions.

This suggests that fund managers were willing to look beyond established listed companies and participate in newer businesses as they became available for investment. However, fresh additions should not automatically be interpreted as large portfolio bets. The number of schemes holding a stock indicates the breadth of adoption, not the size of each position.

STOCKS TRIMMED

The trimming data reveal a distinction between ownership breadth and portfolio intensity. Aggregate mutual fund shareholding, measured by the number of shares held, fell in every highlighted stock. Yet, the number of schemes holding most of them actually increased. ONGC's aggregate shares held fell 9.3 per cent, even as the number of schemes holding the stock rose from 55 to 85.

This suggests that the retreat was not always a wholesale exit. Existing large holders may have booked profits or reduced position sizes, while other schemes initiated smaller allocations.

The sharpest profit-booking was seen in stocks that had rallied strongly, such as Chennai Petroleum, Welspun Corp and Hitachi Energy India. Here, fund managers appear to have monetised gains and controlled position sizes following sharp re-ratings. Elsewhere, reductions came amid weak stock performance, as seen in Wipro, HUDCO and P&G Hygiene.

STOCKS BOOSTING RETURNS

Funds holding select industrial, engineering, pharmaceutical and financial market businesses benefited from strong stock-price appreciation during the period. Schemes with meaningful allocations to these stocks were particularly well placed to benefit. For instance, one of the factors behind Quant Focused Fund's 8 per cent positive return was its allocation of over 6 per cent to BHEL. Similarly, Samco Large & Mid Cap Fund held over 8 per cent in Laurus Labs, while the fund gained over 7 per cent.

For several of these stocks, strong price performance was accompanied by wider participation across schemes and, in some cases, additional purchases. However, high returns did not always prompt further buying. Funds reduced their shareholding in Hitachi Energy India and Sansera Engineering despite strong stock performance. This points to profit-booking following re-ratings, even as the wider spread of ownership suggests that new investors continued to enter these stocks.

STOCK LAGGARDS

The laggard list highlights the pressure that sharp corrections or deteriorating outlook in select stocks could have exerted on fund portfolios. However, in several of these stocks, mutual funds increased both the number of shares held and the breadth of scheme ownership, suggesting that some managers viewed the correction as an accumulation opportunity.

Swiggy was the clearest example. The stock fell 56.1 per cent, yet the number of schemes holding it rose from 80 to 134, while aggregate shares held climbed from 23.6 crore to 65.4 crore. PB Fintech and HDFC Life were other examples.

NEW-AGE BUSINESSES

At the sector level, active funds increased exposure to emerging, specialised and platform-led businesses. The value of holdings in aluminium and aluminium products jumped nearly eightfold, from ₹1,677 crore to ₹13,388 crore. Holdings in medical equipment and supplies, trading and fintech also rose sharply.

The laggards were concentrated in mature commodity and yield-oriented segments. However, these are changes in holding values, not necessarily changes in allocation weights. Higher market prices can also push up the value of holdings, so the figures should not be interpreted as direct evidence of sectoral buying or selling.

Stocks that saw the most fresh additions by active equity MF schemes over the last one year

MCAP	Stock	No. of schemes holding the stock (Sep 2026)	No. of schemes that newly added over past year	Stock return (%)

ALERTS.

HDFC Mutual Fund lowers daily SIP minimum to ₹20 for two schemes

HDFC AMC has announced a reduction in the minimum application amount for daily Systematic Investment Plans (SIPs) in HDFC Balanced Advantage Fund and HDFC Value Fund from ₹100 to ₹20, effective November 2. The revision applies to daily SIPs registered through online modes, excluding physical transactions. The fund house has also increased the minimum number of SIP instalments from six to 30 for both schemes. The fund house clarified that all other terms and conditions governing the SIP facility will remain unchanged.

The rising private credit defaults

GLOBAL VIEW. Smaller borrowers grow increasingly vulnerable to pressures

Bloomberg

TAKE NOTE

A record 112 borrowers with private debt defaulted on their obligations, marking a 22% increase from the previous quarter

The number of companies defaulting on their private credit debt rose by the most on a quarterly basis, as smaller borrowers grow increasingly vulnerable to operating, liquidity and leverage pressures, according to Kroll Bond Rating Agency (KBRA).

A record 112 borrowers with private debt defaulted on their obligations, marking a 22 per cent increase from the previous quarter, KBRA said in a report Thursday. The firm analysed more than 3,000 middle-market companies — with over $1.4 trillion of direct-lending debt — in the last 12 months through September.

"It's death by a thousand cuts, and it's been multiple years of pressure: the pandemic, inflation and higher base rates," said John Sage, Head of private credit research for KBRA. "The cost of debt is higher, sales growth across virtually every sector has been on the decline, and sponsor support is starting to fall away."

Companies in the lower and core middle markets were particularly hit. Lower middle-market firms typically have $100 million or less in debt and EBITDA of $25 million or less, as defined by KBRA. Those in the core category have more than $100 million but less than $500 million of debt. Their EBITDA exceeds $25 million but is less than $75 million.

BORROWING COSTS

By count, about 5.8 per cent of the lower middle-market firms analysed by KBRA defaulted in the 12 months through the third quarter, compared to 4.8 per cent in the prior quarter. Meanwhile, core middle-market defaults increased to 3.7 per cent from 3.2 per cent last quarter, and defaults in the upper middle-market fell to 2 per cent from 2.3 per cent over the same period.

Borrowing costs have remained elevated as inflation has stayed entrenched, complicating matters for companies issuing or refinancing debt. Smaller companies have grown increasingly vulnerable to these stressors.

BANKING. Canara Bank (₹122.80)

Can bank on margin revival

Higher share of loans linked to the repo rate and rapidly growing retail book can aid profitability

Nishanth Gopalakrishnan
bl. research bureau

The stock of Canara Bank was trading at ₹100.4 per share when we gave a positive note in December 2024. Since then, the stock is up 22.4 per cent as against the Nifty's 3 per cent gain in the same period. However, after marking a 52-week high of ₹162.9 in February 2026, it is down about 32.5 per cent. The price-to-book value ratio at the said peak was 1.23x. Today, the ratio works out to 0.87x.

This largely appears to be reflective of the bank's weaker performance in terms of net interest income (NII) growth in FY25 and FY26 — the core of any bank's earnings (see table). Asset quality has continued to improve, and the bank was able to consistently maintain RoA (return on assets) of over 1 per cent, by virtue of lower credit cost and good growth in other income—treasury income and recoveries from written-off accounts in FY25 and gains from IPOs of Canara Robeco AMC and Canara HSBC Life Insurance in FY26.

However, in H1 FY27, NII is back to growth, with a rise of 16.9 per cent over H1 FY26. With repo rate hikes, the NIM (net interest margin) trajectory is looking up, although the FCNR(B) leverage loans may partly be a drag on yields.

The bank has meaningfully improved on asset quality and going by a few key metrics, it is placed closer to SBI, which trades at 1.4x (see table).

The chief differentiating factors are SBI's scale and higher CASA ratio (38.3 per cent versus Canara's 29 per cent), which largely explains its higher margin.

If the valuation multiple does not expand and the bank continues to execute well, sustaining its current RoE (return on equity), book value should grow roughly at the rate of RoE, and the stock price can be expected to track that growth.

That said, given the outlook for the bank as found below, the risk-reward equation appears to be favourable at current valuation for investors to consider the stock for the long term.

REUTERS

How the bank has fared *(in %)*

	FY25	FY26	H1 FY27

NNPA ratio	0.7	0.4	0.3

Standalone figures; growth rates are year-on-year Source: Exchange filings

RECENT PERFORMANCE
Here's how the bank has fared since we last wrote on it.

During FY25-H1FY27, Canara Bank has grown its advances largely in line with the banking system, while its deposits have lagged the system in FY26 and H1 FY27. Its low credit-deposit ratio of around 75 per cent as of Q4 FY25 and 79 per cent as of Q4 FY26 has allowed it to expand without commensurate rise in deposits. Currently the ratio stands at 81 per cent.

Profit growth has been good in FY25 and FY26, but core NII growth has been flat. This is to do with a drop in NIM from 3.05 per cent in FY24 to 2.51 per cent by FY26. Driven by good growth in treasury income and recoveries from written-off accounts in FY25 and one-off gains from IPOs of its AMC and life insurance associates, profit growth has been decent. Operating expenses have been stable with the cost-to-income ratio at around 48 per cent.

In H1 FY27, NIM improved marginally to 2.53 per cent, on the back of the bank mobilising $5.8 billion of FCNR(B) deposits, which helped replace the rather-expensive bulk deposits. According to the bank, FCNR(B) deposits cost only 6.5 per cent while bulk deposits cost 7.5 per cent. These meant NII grew 16.9 per cent in H1 FY27. However, yields hardening resulted in weaker treasury performance, with other income declining 11.4 per cent. Recoveries from written-off accounts are lumpy and they dropped to 7.8 per cent of operating income (NII plus other income) in H1 FY27 from an average of 10.8 per cent in FY25-26.

How Canara Bank stacks up against SBI

As of H1 FY27 (in %)

	SBI	Canara Bank
RoA	1.1	1.0
RoE	18.7	18.5
NIM	2.9	2.5
CRAR	16.1	17.2
GNPA ratio	1.4	1.3
NNPA ratio	0.4	0.3
Credit cost	0.3	0.5
P/B (x)	1.4	0.9

SBI's RoA and RoE include gains from the IPO of SBI AMC of about ₹7,300 crore out of a pre-tax profit of about ₹58,500 crore
Source: Exchange filings

KEY FACTS
- Strong return on equity
- Improved asset quality
- Presence of valuation comfort

Asset quality has consistently improved through H1 FY27, leading to savings on credit cost. Taken together, these push and pull factors have allowed the bank to maintain RoA above 1 per cent. RoE, though lower than before, remains stronger than that of many peers.

OUTLOOK
The management had guided for a loan growth of 11-12 per cent for FY27. However, this earlier guidance may very well be surpassed, given strong demand for credit.

Margin wise, NIM may be expected to inch higher with the RBI having embarked on a rate hike cycle. The share of loans linked to repo rate is a higher 53 per cent for Canara Bank. Transmission of rates on these loans take place as early as the immediately next reset period — which can be monthly, quarterly and so on. Per the management, these loans have completed getting repriced in reaction to RBI's October 25-basis point (bp) hike and its impact on NIM can be seen in Q3 FY27.

The bank is also seeing robust growth in the retail segment. The segment grew 42.8 per cent in FY25, 32.9 per cent in FY26 and 31.6 per cent in H1 FY27, taking its share of total loans from 16 per cent as of FY24 to 24 per cent currently. Agri, SME and corporate advances account for 22 per cent, 13 per cent and 41 per cent of the loan book. Retail advances carry a yield of 8.65 per cent currently, as against the yield on the overall loan book at 8 per cent. Momentum continuing in retail segment could aid margin. However, the lower spread of FCNR(B) leverage loans (loans advanced to non-residents against their FCNR(B) deposits) of only 40-50 bps, may be a drag on NIM expanding.

With respect to other income, the management assesses that the pool of written-off accounts from which recoveries can be expected is contracting. The related impact can be seen in lower contribution to operating income, going forward. However, yields on G-Secs have fallen from elevated levels seen towards October-end. This can arrest treasury losses. All the above factors could help the bank maintain RoE.

ECL IMPACT
From FY28, banks move to the ECL (expected credit loss) regime of providing for losses on loans (and on investments). The regime, by nature, is more proactive than the current one and so, banks may have to provide more. Canara Bank estimates the one-time transition impact could be as large as ₹12,000-15,000 crore on the net worth or 10-12 per cent of current net worth. This was, in fact, upped from ₹10,000-12,000 crore a few quarters ago, to accommodate the potential losses on investments held to maturity, due to rising yields.

Given that yields have cooled, the bank may revise the estimate downward. Further, the bank expects to stagger the one-time impact over two years, as against the RBI-permitted period up to FY31.

Once transitioned, annual recurring credit cost also is expected to be higher, such that, per the management's assessment, an RoA of 0.8 per cent may be the new normal for the bank. Higher credit cost under ECL is not specific to Canara Bank alone and applies to the whole banking industry. The management looks to pass this on to the borrower, if the industry decides to do so.

PHARMACEUTICALS. Concord Biotech (₹632.15)

Fermenting next growth phase

Base operations along with injectables and CDMO to drive growth and margin recovery

Sai Prabhakar Yadavalli
bl. research bureau

Concord Biotech is an API manufacturer with a niche built around fermentation-based products — well reflected in strong profitability metrics. At the time of IPO in August 2023, we noted the high entry barriers and growth outlook as being favourable to long-term investors. The stock nearly tripled by September 2024, but has given up gains, owing to a sub-par FY26 performance, to return 70 per cent from the IPO price-band (adjusted for bonus shares). The stock currently trades trade at 33 times one-year forward earnings compared to the listed history average of 38 times or 32 times trailing at the time of IPO.

The company has tided over FY26 concerns and reported 26 per cent year-on-year revenue growth in HIFY27 with an EBITDA margin of 33 per cent. The profitability has reduced from the 38-40 per cent range, owing to costs associated with new ventures of injectables and a US front-end. The optimal utilisation of the two entities in the next two-three years should bridge the margin deficit to an extent along with an additional lever of growth in the next two years. Base operations of the company also have potential for high growth. Long term investors can consider accumulating the stock in small quantities at current levels and on any declines.

BASE BUSINESS
Concord manufactures fermentation-based APIs where living organisms are used as starting materials, compared to chemical-based APIs. These APIs are used in therapies addressing immunology, oncology and anti-infectives. The company also secures 20 per cent of revenues from formulation; which is to provide API/formulation option to its clients.

With the base business, the management expects to drive 18-19 per cent annual revenue growth in the medium term of two-three years. This should be supported by the existing portfolio, recent launches and new product introductions. The company has been able to secure a larger wallet share of existing clients on account of supply diversification playing out. China has been the primary supplier for fermentation-based APIs but the management has achieved price parity in its portfolio. The company is also targeting to be a second supplier for clients and maximize its wallet share.

The company has a portfolio of 30 products including three large potential products launched in the last one year, Nystatin, Mycophenolate mofetil, fusidic acid. The pipeline consists of 10-15 products which should support two-three launches per year as per the management.

INJECTABLES, CDMO
Concord Biotech has commercialised an injectables facility to complement its API and formulations back-end. The division is in early stages of revenue generation and should lead to client contracts being signed in the near term. Potential clients include contract manufacturing for large domestic clients, exports to South-East Asian/African countries and its own branded generics portfolio. The injectables facility potential utilisation should deliver ₹300 crore revenues at peak, which should imply a 4-5 per cent addition to annual revenue growth at a conservative ramp-up in operations.

Concord Biotech has also launched its CDMO operations with one client generating $1-2 million in revenues in FY26. But for the long term, the company is in advanced discussions with clients. The company defines its CDMO segment partnering IP bearing clients, which differentiates it from a regular contract manufacturing operation. This implies a higher value-added partnership, and the division will most likely take several years for revenue generation but with high potential for value addition.

FINANCIALS
Concord Biotech reported revenue/PAT growth of 19 per cent/24 per cent CAGR in FY23-25 and in FY26, reported a decline of 12 per cent/30 per cent respectively. In FY26, the company faced headwinds in the US and West Asia along with European markets. The supply-chain uncertainty on account of tariffs impacted the US markets, and trade route and geopolitical events impacted demand from West Asia. European markets were impacted by delay in regulatory compliance, which has been received.

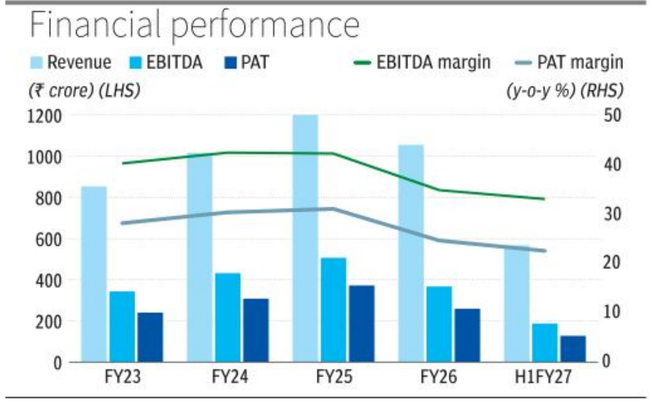

With uncertainty on supply chains resolved, the company reported revenue/PAT growth of 26 per cent/19 per cent growth in H1FY27 to ₹567 crore/127 crore respectively. The margins though are under pressure, as shown in the table. Injectables, CDMO and two other marketing divisions — Stellon Biotech for the US and Inspira for India have been established.

While the divisions' growth outlook is strong, its current cost base has impacted margins. The company reported that excluding the costs, the margins for FY26 and H1FY27 would have been 39 per cent/38 per cent respectively. As the division's scale, the unabsorbed cost pressure on margins is also expected to decrease in the next two or three years.

The company has a strong balance sheet with zero debt and cash equivalents of ₹445 crore in September 2026. It does not have capacity constraints for the medium term as well.

Financial performance

KEY FACTS
- Continued momentum in base business
- Margin expansion on new venture ramp-up
- Tempered valuations

businessline's editorial policy prohibits analysts from taking positions in the stocks they recommend — **Editor**

GLOBAL BOARDROOM CHATTER.

What they say on their India plans

With India being the fastest growing large economy, 'what is your India plan?' is a common topic in boardrooms of most global corporations. One important source to distil their India plans is from their quarterly earnings calls. This column will present what CXOs of global corporations are saying about India, along with their perspectives and plans during the current earnings season. With the September quarter earnings season in progress, here are some from companies that reported their earnings last week.

Bentley Systems, Incorporated: (BSY, m-cap $13.4 billion)
An engineering software solution company mentions about the strong development and growth in India.

"India delivered very strong growth, driven by both massive domestic investments in water, grid and offshore energy infrastructure and by its role as the global engineering hub for multinational firms."

Genco Shipping & Trading: (GNK, $1.1 billion)
A cargo ship fleet operator that transports iron ore etc globally speaks about the potential scenario of India importing high-quality iron for steel production.

"When we look at India, because of the low ferrous content in their iron ore, we actually — and they're large growth on the steel production side, we actually think you could see a scenario over the next few years where India is importing more and more high-quality iron ore."

ReNew Energy Global Plc: (RNW, $2.8 billion)
A company that develops, owns and operates renewable energy projects is confident on the long-term growth of renewable energy in India.

"As we had expected at the start of the year, power demand has also come back strongly, and this continues to support the long-term growth of renewable energy in India."

Ball Corporation: (BALL, $17.2 billion)
A company that manufactures recyclable aluminium packaging expresses their confidence in the continued growth of aluminum packaging.

"India continues to be one of Ball's most exciting growth markets, and this investment reflects our confidence in the country's long-term economic potential and the continued growth of aluminum packaging."

International General Insurance Holdings: (IGIC, $1 billion)
The company that provides specialty commercial insurance and reinsurance for businesses speaks about the abundant potential present in India.

"Now with India being one of the fastest-growing economies in the world, the opportunities here, not just in India, but the whole Indian subcontinent are quite abundant, especially in specialist niche areas like cyber, surety and liability business.

Deutsche Lufthansa AG: (LHA, €10.1 billion)
The company that operates a global airline business mentions India's demand stands out as a key growth market.

"Demand remains particularly strong in Asia-Pacific with India standing out as a key growth market and also transpacific flows are becoming increasingly important for us, even though we're on the other side of the world."

WHO AM I?.

Are you an avid investor? How well do you know corporate India?

Here's a challenge. Using the five clues below, identify the company that is being talked about here

1. I just completed 30 years of being listed and was founded by the pioneer of my business, who had no academic credentials. All three of his sons are on the board, which is now 10 members strong.
2. A globally-renowned fund remained the largest non-promoter shareholder for seven years until 2021 and then exited. My stock price moved almost 10 times higher within three years of their exit.
3. In 2025, my operating profit was higher than the annual sales of any year prior to Covid. My spectacular profit growth came without compromising return on equity, which has remained above 20 per cent over the previous three, five and 10 years.
4. Despite losing almost half my value last year, I have still delivered returns of more than 25 per cent per annum to my shareholders over the last three, five and 10 years.
5. My number of shareholders has grown fivefold over the last three years, even though I have been a listed company for more than 30 years. Currently, 40 per cent is owned by the retail public.

Bulls roar back

F&O TRACKER. Derivatives and charts turn bullish as key resistance levels give way

GETTYIMAGES/ISTOCKPHOTO

Akhil Nallamuthu
bl. research bureau

Nifty 50 (25,030) and Nifty Bank (59,086) staged a strong recovery last week, surging 8.6 per cent and 8 per cent respectively. Both indices recorded their biggest weekly gains in the recent years, signalling a sharp improvement in market sentiment.

The futures and options (F&O) data supports the positive momentum. Nifty futures witnessed considerable short covering, while options positioning turned increasingly bullish.

Foreign institutional investors (FIIs) reduced their net short positions in index futures by 58 per cent to 1 lakh contracts. Their net short positions in index calls, too, declined 47 per cent to 1.28 lakh contracts. However, net long positions in index puts fell 13 per cent to 4.5 lakh contracts, indicating a moderation in bearish bets.

Retail traders reduced their net long positions in index futures by 55 per cent to 83,781 contracts. Meanwhile, their marginal net short positions in index calls turned into net longs of 11,394 contracts.

Overall, derivatives positioning and charts indicate a decisive shift in favour of the bulls. Both indices have broken above important resistance levels, strengthening the prospects of further gains.

NIFTY 50

Nifty (Nov) futures (25,032) surged 8.4 per cent last week. During this period, the outstanding open interest (OI) of this contract dropped from 156.6 lakh contracts to 120.9 lakh contracts, indicating considerable short covering. This suggests that bearish participants have substantially reduced their exposure following the sharp rally.

Meanwhile, December futures gained 8.3 per cent, with its OI increasing 20 per cent to 14.8 lakh contracts, suggesting fresh long build-up.

In options, the Put Call Ratio (PCR) of November contracts increased from 1.2 to 1.3, while that of December options rose from 1.1 to 1.4.

This indicates relatively higher put writing across both expiries, reflecting bullish expectations for the current and next series.

Overall, the F&O positioning shows that participants are increasingly placing bullish bets, strengthening the prospects of further gains. Supporting this, the chart of Nifty (Nov) futures shows that the contract has decisively surpassed the key resistance at 25,000, opening the door for further gains.

BULLISH TRENDS

- FII short positions plunge
- PCRs climb across expiries
- Minor pullbacks possible

The next notable hurdles are at 25,300 and 25,700. However, the rally may not continue uninterrupted. Given the sharp rise last week, a corrective decline remains possible. Such a move could drag Nifty futures to 24,800 or even 24,500. These levels could attract fresh buying interest.

Nevertheless, we expect the contract to eventually resume its uptrend and reach 25,700 before the November expiry.

On the other hand, a breakdown below 24,500 could weaken the bullish momentum and trigger a deeper correction towards the 24,200-24,000 support band. However, this appears less likely at present, given the strong momentum favouring the bulls.

NIFTY BANK

Nifty Bank (Nov) futures (58,979) rallied 7.6 per cent last week. Similar to Nifty futures, the outstanding open interest (OI) of Nifty Bank futures declined 3 per cent to 21.8 lakh contracts, indicating short covering.

Meanwhile, December futures gained 7.5 per cent, with its OI increasing 14 per cent to 1.6 lakh contracts, suggesting fresh long build-up.

The Put Call Ratio (PCR) of November options increased from 0.95 to 1.25, while that of December contracts improved marginally from 1.10 to 1.14. This indicates relatively higher put writing, reflecting bullish expectations among options traders.

Overall, the derivatives data suggests that participants anticipate further gains in the coming sessions.

The chart of Nifty Bank (Nov) futures also supports the positive outlook.

The contract has surpassed several important resistance levels and formed a higher high, signalling strengthening bullish momentum.

From the current level of 58,979, November futures can advance to the 61,000-61,300 resistance band. A decisive breakout above 61,300 can extend the rally to 61,800-62,000.

However, the contract could witness a temporary correction before resuming the uptrend. Such a decline might drag it to 58,000 or even 57,000.

Nevertheless, the broader outlook remains bullish, and any correction is likely to be short-lived.

Only a decisive breakdown below 57,000 can weaken the bullish outlook, potentially triggering a deeper decline towards the 55,600-56,000 support band.

F&O STRATEGY.

Traders can buy Wipro call option

KS Badri Narayanan

Though the long-term outlook remains negative for the stock of Wipro (₹198), in the short term we expect it to remain bullish. Wipro finds an immediate support at ₹175 and the next one is at ₹159.

On the other hand, the stock finds an immediate resistance at ₹228 followed by another hurdle at ₹270. Only a clear close above ₹280 will change the long-term outlook positive for Wipro.

F&O pointers: Wipro November futures closed at ₹198.67 against the spot close of ₹198. Open interests slipped from 16.58 lakh to 15.70 lakh shares even as the stock moved between ₹190 and ₹200. This indicates unwinding of open positions.

Option trading indicates that the stock could move between ₹190 and ₹210.

Strategy: We advise traders to consider buying the 205-call option on Wipro. The contract closed with a premium of ₹2.26. As the market lot is 3,000 shares, this would cost traders ₹6,780.

The premium paid will be the maximum loss one can suffer and that will happen if Wipro fails to move above ₹205 before the expiry. The break-even point is ₹207.26. The profit potential is higher if the stock moves higher sharply.

We advise traders to keep the initial stop loss at ₹1. This can be shifted to ₹2 if the stock opens on a flat or positive note.

Aim for a target of ₹3.50-4.50.

Traders can stay away from this strategy if the stock opens at or above ₹205 or below ₹190 on Monday. We advise traders to exit positions by Friday, due to time decay.

Follow-up: We had advised going short on Cochin Shipyard. However, contrary to our expectation, the stock opened and moved up sharply, triggering stop loss.

Note: The recommendations are based on technical analysis and F&O positions. There is a risk of loss in trading.

Change in Open Interest (OI)

Scrip	FII		Retail	
	As on Nov 6	Weekly change %	As on Nov 6	Weekly change %
Future Index Long	48,656	41	180,828	-27
Future Index Short	149,072	-46	97,047	62
Net Futures	-100,416	-58	83,781	-55
Index Call options Long	861,276	42	2,906,186	3
Index Call options Short	988,900	17	2,894,792	2

Closing short positions before expiry

MASTERING DERIVATIVES. It pays to keep your short call position open till expiry to realise maximum gains

Venkatesh Bangaruswamy

Previously in this column, we discussed the costs and risks associated with long call position that is open till expiry. To recap, you are exposed to delivery margins and high cost of exercise if your long call position becomes in-the-money (ITM) as it approaches expiry. This week, we discuss the risks associated with short call position that is open till expiry.

TIME DECAY BENEFIT

Short call positions benefit from time decay – the loss in time value of an option with each passing day. This happens because options carry finite life. The time value of the option must become zero at expiry. The loss in time value is not the same every day; it accelerates as the option approaches expiry day. This argument seems to suggest that it pays to keep your short call position open till expiry.

GETTY IMAGES/ISTOCKPHOTO

That way, you can realise maximum gains from the short position, which is equal to the premium you receive when you initiate a short position. There are, however, several factors to consider.

One, brokers levy margins on your short position. NSE takes four snapshots of your positions during a trading day. If your account falls short of the margin based on the highest price during these four snapshots, your account will attract shortfall penalty. Note that this margin is applicable for all the days your short position is open. But these margins are higher on expiry day because of higher volatility.

TIME MATTERS

Short call positions benefit from time decay – the loss in time value of an option with each passing day.

Two, the higher volatility on the expiry day exposes your short position to high (gamma) risk. Suppose you have an at-the-money (ATM) strike, a small increase in the underlying price will make this strike ITM. Now, open ITM equity call position at expiry means you will have to deliver shares based on the option's permitted lot size. While delivery risk is lower for out-of-the-money (OTM) options, you must be mindful of the risk if you hold a naked short position in the immediate OTM strike.

Perhaps, an optimal course of action would be to close your short position on Monday, the day before expiry. The trade-off? You give up small gains, which is the residual (remaining) time value on the naked short call you hold. But you can avoid the delivery risk and the risk of spike in option price on expiry day because of high price volatility.

OPTIONAL READING

A bear call spread can reduce delivery risk, as it involves going short on a lower strike and long on a higher strike call. You will still be exposed to the risk of shortfall in peak margin if the underlying price increases. This is because the short call will increase faster than your long call position. The upshot? As with naked short call, it is optimal to close your bear call spread a day before expiry. If you carry a naked short call position, or a bear call spread on the day of expiry, consider closing the position before 3 pm.

Supports fuel a rebound

BULLION CUES. Strong dollar remains a risk

Akhil Nallamuthu
bl. research bureau

Precious metals rebounded last week after declining in recent weeks. Gold ($4,070.60/ounce) and silver ($51.70/ounce) gained 5 per cent and 5.8 per cent, respectively.

Gold bounced off a long-term support, keeping hopes of a bullish reversal alive. Silver too recovered. However, a potential appreciation of the dollar remains a risk.

In the domestic market, gold futures (₹1,42,167/10 gram) gained 2.7 per cent, while silver futures (₹1,84,787/kg) rose 3.2 per cent.

The gains were relatively modest as the rupee strengthened 1.1 per cent against the dollar last week

MCX-GOLD (1,42,167)

Gold (Dec) futures rallied from the support at ₹1,38,000, aided by a recovery in global prices from $3,850. With international gold reclaiming $4,000, further gains appear likely.

The nearest resistance for MCX gold futures is at ₹1,45,000, coinciding with the 50-day moving average. A breach of this level can strengthen bullish momentum, potentially lifting the contract to ₹1,50,000.

A breakout above ₹1,50,000 can turn the medium-term outlook positive.

On the downside, supports are at ₹1,40,000 and ₹1,38,000. As long as the latter holds, the bias will remain positive. A breach of ₹1,38,000, however, can drag the contract to ₹1,33,300.

MCX-SILVER (1,84,787)

Silver (Dec) futures marked a lower low of ₹1,75,251 on Tuesday before recovering. However, the contract appears relatively weaker than gold, although gains in the yellow metal could support silver.

International silver has rebounded from the $46-48 support zone. With this region holding and gold showing recovery potential, the outlook for silver remains constructive.

MCX silver futures can rally to ₹1,93,750 initially. A breach of this level can lift the contract to ₹2,00,000. A breakout above ₹2,00,000 can strengthen the upswing, potentially taking the price to ₹2,10,000 in the near term.

Conversely, a fall below the support at ₹1,75,000 can trigger a deeper decline to ₹1,67,000.

Bears make their move

CRUDE CHECK. Recovery likely to be short-lived

Akhil Nallamuthu
bl. research bureau

Oil prices crashed last week, posting their biggest weekly loss since March 2020.

Brent crude oil futures on the Intercontinental Exchange (ICE) ($98.30/barrel) tumbled 13.3 per cent, slipping below the $100-mark and snapping the recovery seen in recent weeks.

Crude oil (Nov) futures in the domestic market (₹8,459/barrel) plunged 14.9 per cent.

BRENT FUTURES ($98.30)

Brent crude futures fell sharply, marking a two-month low of $93.22 on Wednesday. However, despite witnessing one of the steepest declines in recent years, the contract managed to close above the crucial support at $98.

While a minor recovery is possible, the contract is unlikely to sustain a rally beyond $105, a notable resistance. Given the prevailing bearish momentum, we expect Brent futures to resume the decline either from the current level of $98.30 or after a temporary rebound towards $105.

Once the decline resumes, the contract can slip below the recent low of $93.22 and extend the downswing to $90 and subsequently to $86.

For the outlook to turn positive, Brent futures should break above $105 and sustain the rally. However, such a move appears less likely at present.

MCX CRUDE OIL (8,459)

Crude oil (Nov) futures crashed below ₹9,000 and is now trading beneath both the 21- and 50-day moving averages, indicating a deterioration in the short-term trend.

The weekly loss of 14.9 per cent was the steepest since the second week of April this year, when the contract declined 15.1 per cent.

The nearest support is at ₹8,300. A recovery from this level could trigger a temporary rebound towards ₹9,000. However, the ₹9,000-9,300 band is expected to act as a strong resistance zone, potentially limiting the upside.

Crude oil futures could resume the decline either from the current level or after a rebound towards ₹9,000.

Once the fall resumes, the contract can slide to ₹7,600. If the selling pressure persists, the downtrend could extend further, dragging the price to ₹7,000.

Overall, the bias remains bearish, with any recovery likely to be short-lived.

Early Deepavali celebration

INDEX OUTLOOK. A near-term correction is possible before the broader upmove resumes

GETTY IMAGES/ISTOCKPHOTO

Gurumurthy K
bl. research bureau

Market has given a nice Deepavali gift to everyone in the form of a strong 8 per cent rally last week. The surge in Indian benchmark indices has come at a time when the global markets were beaten down.

The strong rise last week strengthens our bullish case. The momentum is strong. There is room for the indices to rise more. However, we see good chances for an intermediate and a short-lived correction before the next leg of rally happens.

FPIS BUY

The Foreign Portfolio Investors (FPIs) continued to buy Indian equities for the third consecutive week. Indeed, their quantum of purchase also surged last week. The equity segment saw a net inflow of about $4.11 billion last week. The FPI action in the coming weeks will need a close watch. If they continue to buy, then the Sensex and Nifty can move further higher.

NIFTY 50 (25,030.35)

Short-term view: An immediate resistance is at 25,050 which may hold on its first test. Failure to rise past this hurdle can trigger a corrective fall to 24,600 or even 24,300.

However, a fall beyond 24,300 is less probable as fresh buyers can come into the market and limit the downside.

A bounce either from 24,600 itself or from 24,300 can take the Nifty to 25,100 in the short term.

In case Nifty breaks above 25,050 from here itself, then 25,500-25,700 can be seen this week.

Medium-term view: The rise within the 22,000-26,500 range is happening much faster than expected. At this pace, Nifty can reach 26,500, the upper end of the range much quicker.

We retain our broader positive view. As such, we expect the Nifty to breach 26,500 and rise 28,000 and even 30,000 in the long term.

Failure to breach 26,500 can drag the Nifty down to 25,000 or even lower. In that case, the 22,000-26,500 range will continue to remain intact and the rally to 28,000-30,000 will get delayed further.

IMMEDIATE RESISTANCE

- Nifty 50: 25,050
- Sensex: 81,100
- Nifty Bank: 59,700

NIFTY BANK (59,086)

Short-term view: There is some room on the upside from here. Resistance is at 59,700 which can be tested and can cap the upside for now. A reversal from this resistance can drag the Nifty Bank index down to 57,800-57,700.

After this fall, an upward reversal is more likely to be seen. That leg of upmove can take the Nifty Bank index higher to 61,200.

If the break above 59,700 happens in the first attempt itself, then the rise to 61,000 can happen straight away.

Medium-term view: The overall bullish outlook remains intact. The rise to 61,000 mentioned last week could be happening much faster than expected. A decisive break above 61,000 can boost the momentum. That will clear the way for the long-term rally to 68,000-69,000.

Failure to breach 61,000 from here can drag the index down and keep it in a range of 53,000-61,000 for some time. That in turn will delay the long-term rally mentioned above.

SENSEX (81,028.02)

Short-term view: Near-term resistance is around 81,100. Next resistance is at 82,000. A rise beyond 82,000 immediately could be difficult. Sensex can turn down from either of these two resistances and see a corrective fall to 78,800-78,500. After this fall, the index can rise back towards 82,000 and go further higher towards 84,000.

In case the Sensex manages to breach 82,000 from here itself, then the rise to 84,000 can happen straightaway.

NIFTY MIDCAP 150 (22,271.15)

The rise to 22,000 mentioned last week has happened much faster than expected. Indeed, the Nifty Midcap 150 index has risen well beyond 22,000.

The region between 22,000 and 21,800 will now be a very good support zone. The Nifty Midcap 150 index can rise to 22,800-22,900 in the short term.

The bounce from the low of 20,336 made in October end and a strong follow-through rise last week keeps the broader bullish view intact. There are good chances to see a rise to 24,000 in the medium term. An eventual break above 24,000 can then clear the way for a fresh rally to 28,000 in the long term.

NIFTY SMALLCAP 250 (17,386.15)

The rise above 17,000 last week has given some relief. But the fall on Friday indicates lack of strong buyers in the market. So, the price action this week will need a close watch.

Support is around 17,000. As long as the index stays above this support, the bias will remain positive. A rise to 18,000 is possible in that case. The region between 17,900 and 18,100 is an important resistance zone. A decisive break above 18,100 is needed to turn convincingly bullish. Such a break can take the Nifty Smallcap 250 index higher to 19,000, going forward.

That in turn will keep our long-term bullish view intact. An eventual break above 19,000 can then take Nifty Smallcap 250 index higher to 23,000 and 24,500 in the long term. The index will come under pressure again only if it breaks below 17,000. If that happens, a fall to 16,000 can be seen again. It will also keep the danger alive of seeing 15,000 on the downside.

However, such a fall, though less likely, may not alter our long-term bullish view. It will only delay the above-mentioned rally to 23,000-24,500. So, if a fall to 16,000-15,000 happens, then that can be a good buying opportunity from a long-term perspective.

Watch **bl. Guru** share the Nifty and Bank Nifty technical outlook for this week

English *Tamil*

TECH QUERY

GURUMURTHY K, bl.research bureau

What is the outlook for Alkem Laboratories? I bought this stock at ₹5,670.

Sakthi Narmada, Chennai

Alkem Laboratories (₹5,265): The stock is consolidating within the broad uptrend. There is a triangle pattern taking shape. Key supports are at ₹4,900 and ₹4,700. Resistances are at ₹5,700 and ₹5,950. A strong break above ₹5,950 can take the share price higher to ₹7,700 initially and then to ₹9,000 eventually over the next three years or so. Keep a stop-loss at ₹4,520 and hold the stock. You can also accumulate at current levels. Move the stop-loss up to ₹5,550 when the price goes up to ₹6,100. Revise the stop-loss higher to ₹6,300 and ₹7,800 when the price touches ₹7,200 and ₹8,700 respectively. Exit the stock at ₹8,900. The bullish view will go wrong if the stock declines below ₹4,700. If that happens, ₹4,200 can be seen on the downside.

I bought Intellect Design Arena shares at ₹920. Can I accumulate around ₹490?

Elakkiya Rajendran

Intellect Design Arena (₹515): The long-term uptrend seems to have reversed. Strong resistances are at ₹600 and ₹670. There is a danger of seeing a fall to ₹400 from here. In a worst-case scenario, a fall to ₹300 also is a possibility that cannot be ruled out. A rise above ₹700 is needed to ease the downside pressure. Ideally, a sustained break above ₹800 is needed to turn the outlook bullish. Only then a rise to ₹1,200 will come back into the picture. But that looks unlikely at the moment. Since we see high chances for a deeper fall, accumulating at ₹490 is not advisable. Instead, you may have to consider exiting the stock at current levels and accept the loss.

I have shares of Trent. My average purchase price is ₹3,270. What is the outlook?

Isha, Kolkata

Trent (₹3,075): The trend is down since October 2024. However, there is an early sign of a bullish trend reversal. Resistance is around ₹3,300. A break above it will confirm the trend reversal. Such a break can take the share price higher to ₹3,800 initially. It will also keep the upside open to revisit ₹5,000 levels over the next two-three years. You can consider accumulating at current levels. Keep a stop-loss at ₹2,470. Revise the stop-loss higher to ₹3,190 as soon as the stock goes up to ₹3,450. Move the stop-loss higher to ₹3,780 and ₹4,650 when the price touches ₹4,050 and ₹4,850, respectively. Exit the stock at ₹5,000. The bullish view will go wrong only if the price breaks ₹2,650, an important support.

What is the outlook for SRF? I bought this stock at ₹2,650.

Rakesh, Mumbai

SRF (₹2,485): Barring the rise to ₹3,319 in July 2025, the stock has been broadly range-bound. There has been a prolonged sideways move between ₹2,000 and ₹2,900 for more than five years now. Within that, the stock touched a low of ₹2,177 last month and is bouncing back. A strong follow-through rise from here can take the share price higher to ₹2,900-₹3,000 in the next three to five months. If you have a high-risk appetite, accumulate at current levels and hold the stock. Keep the stop-loss at ₹2,140. Move the stop-loss higher to ₹2,580 when the price goes up to ₹2,740. Revise the stop-loss higher to ₹2,640 and ₹2,820 when the share price reaches ₹2,730 and ₹2,880, respectively. Exit the stock at ₹2,940.

MOVERS & SHAKERS

AKHIL NALLAMUTHU, bl. research bureau

Action Construction Equipment (₹1,167.25)

Confirms morning star pattern

The stock of Action Construction Equipment gained a little over 17 per cent last week. Thus, on the week chart, it has formed a morning star candlestick pattern, an indication that the trend has turned positive. The chart shows that the stock has now formed a higher low and there is a good chance that the stock will make higher highs. Over the next few months, the price is likely to rise to ₹1,530. Note that there could be a consolidation at around ₹1,370 before the eventual breakout of this level. In case there is a fall from the current level, the support at ₹980 and ₹760 are likely to arrest the downtrend. Until the base at ₹760 holds, the stock will retain a positive outlook.

Havells India (₹1,122.95)

A double-bottom pattern

The stock of Havells India rose 11 per cent last week. The recent bounce happened on the back of the support at ₹1,000, the second such rebound since the beginning of October. The chart shows that the stock has formed a double-bottom. The neckline is at ₹1,130, a breakout of which will confirm the pattern and the bullish trend reversal. Given the upward momentum, we expect the stock to move above ₹1,130 soon. This will open the door for an upswing to ₹1,300. A breakout of this can lift it to ₹1,450. However, if there is a decline leading to the breach of the support at ₹1,000, the bullish outlook will be negated. In this case, the price can slip to ₹850, a support.

Kalyan Jewellers India (₹590)

Forms a strong base

The stock of Kalyan Jewellers India gained 18 per cent last week, covering the loss of the preceding six weeks. Such a rally strengthens the base at ₹495, on the back of which the uptick happened. While there is a resistance ahead at ₹625, we expect the stock to ease past this level. In the coming months, we anticipate the retest of the barrier at ₹780. If this level is breached, the uptrend can extend to ₹820. On the other hand, if there is a decline from the current level, the stock can find support at ₹530 and ₹495. As long as the support at ₹495 holds, the inclination will be bullish. In case this is breached, the price can drop to ₹430. But this is unlikely as the bulls have gained good traction.

Support to give a relief

US MARKET OUTLOOK. The US benchmark indices can bounce back after some more fall

GETTYIMAGES/ISTOCKPHOTO

Gurumurthy K
bl. research bureau

BOUNCE BACK

The US 10Yr Treasury Yield can sustain above 4.8 per cent and rise back towards 5 per cent.

It was a volatile week for the US stock markets. The Dow Jones Industrial Average, S&P 500 and NASDAQ Composite index continues to get beaten down. The Dow Jones, down 0.94 per cent, fell for the second consecutive week. The S&P 500 and NASDAQ Composite indices closed in negative for the fourth consecutive week. They were down 2.68 per cent and 3.37 per cent, respectively. The overall sentiment is negative, and more fall is on the cards. However, key supports are also coming up on the charts. So, the US benchmark indices can see a recovery after witnessing some more fall from current levels.

DOW JONES (51,291.14)

The sharp fall after the initial surge to 53,716 keeps the broader bias negative. Resistance is in the 51,500-51,600 region. The Dow Jones can fall to 50,700 or 50,400 from here. Failure to bounce back thereafter can trigger an extended fall to 49,900-49,800.

This broad 50,400-49,800 is a strong support zone which can halt the current fall. We can expect the Dow Jones to bounce back anywhere from the 50,400-49,800 region. That in turn can take the index upto 51,500 and even higher.

S&P 500 (7,376.86)

The break above the 7,600-7,620 resistance zone did not sustain. The S&P 500 touched a high of 7,715 and fell sharply giving back all the gains.

The index can fall to 7,300-7,280 this week.

But thereafter, we see high chances for a bounce back move to 7,450-7,500. The price action in the 7,300-7,280 region will need a very close watch this week.

In case the index fails to bounce back from the 7,300-7,280 support zone, then an extended fall to 7,200 can be seen.

NASDAQ COMPOSITE (24,579.42)

The extended fall to 24,000 is happening as mentioned last week. The NASDAQ Composite index made a low of 24,262 and then has recovered slightly from there.

Key supports are at 24,350 and then in the 24,100-24,000 region which can be tested this week. We expect the index to sustain above this support.

A bounce from the 24,100-24,000 support zone can take the NASDAQ Composite index up to 25,200 or even 25,500.

The danger is only if the index breaks below 24,000. In that case, a fall to 23,000 can happen.

DOLLAR OUTLOOK

The support in the 101-30-101.20 region limited the downside in line with our expectation. The dollar index (102.28) touched a low of 101.10 and then has risen back sharply. That keeps intact our overall bullish view. Immediate support is at 102. Below that 101.50 will be the next key support.

Resistance is in the 102.50-102.55 region. We see high chances for the index to break this hurdle. Such a break can take the dollar index higher to 103-103.50 in the short term.

As mentioned last week, the dollar index has to decline below 100.90 to become bearish. Only then a fall to 100 will come into the picture. But that looks less likely.

TREASURY YIELD

The US 10Yr Treasury Yield (4.83 per cent) came down as expected last week to test the 4.85-4.8 per cent support zone. It is also holding well above 4.8 per cent in line with our expectation.

As long as the yield stays above 4.8 per cent, there are good chances to see a rise back to 5-5.05 per cent in a week or two. An eventual break above 5.05 per cent can then take the Yield further higher to 5.2 per cent. That in turn will also keep the doors open to see 5.6 per cent on the upside in the long term.

This bullish view will come under threat if the yield breaks below 4.8 per cent. If that happens, then a fall to 4.6 per cent can be seen.

BANDU'S BLOCKBUSTERS.

On April 1, four years back, piqued by the incessant jokes in the village at his expense, Bandu Barve decided he'd had enough. It was time for him to turn 'smart'. His dead granny's voice rang in his ears — "Read the papers, Bandya, they tell you all." So, off went Bandu to the stash of newspapers on his father's desk. As luck would have it, the first paper Bandu got his hands on was The Hindu businessline. The stock recos, in particular, had him in thrall. Soon Bandu metamorphosed into an ace investor and trader.

These days, Bandu picks five stocks each Sunday, which he believes will be blockbusters over the next week

Valuation Radar: The Good, The Bad, The Ugly

The Benchmark indices, Sensex and Nifty 50 were up 8.8 and 8.6 per cent respectively last week. All sectoral indices gained during the week. BSE Consumer Durables gained the most by 10.8 per cent, followed by BSE Realty 10.2 per cent and BSE Auto 9.2 per cent. BSE IT and BSE Capital Goods gained the least by 1.3 and 2.4 per cent respectively last week.

Takeaways from Take 500

Wondering how to choose stocks for your portfolio from the dozens which are listed? Or how to keep track of the ones you own? Well, the listings on this page help you sift through the leading companies on their fundamentals and keep an eagle eye on their financial performance. Here's a short guide to interpreting the numbers:

CMP (Current Market Price) is the closing price of a stock on BSE on its last traded day, usually Friday.

EPS (Earnings per Share) is the net profit that the company has earned in the latest financial period, on each outstanding share. Here, we capture each company's total EPS for the last available trailing 12 months.

PE (Price Earnings Ratio) is the single most important number to gauge if a stock is expensive or cheap enough to buy. It divides the company's current market price by its EPS.

PB (Price to Book value) measures a company's stock price relative to its book value or net worth. PB is the appropriate value measure for banks and asset-heavy companies.

Sales (Qty) and Profit (Qty) capture the growth in a company's net sales and net profits for the latest reporting quarter, over the previous year, in percentage terms. We've adjusted the numbers for one-off and exceptional items.

Sales (TTM) and Profit (TTM) make the same comparisons for the trailing twelve months.

Wkly Rtn (Weekly Return) gives the change in the price of a stock in the last one week.

ROCE (Return on Capital Employed) tells you what returns a business is generating on the capital it uses.

DER (Debt Equity Ratio), which divides a company's total loans by shareholder funds, indicates how indebted a company is.

ROCE and **DER** give you the latest available year-end numbers for the company.

Yearly High and Low tell you the range that the company's stock has spanned in the last one year.

Face value other than ₹10 per share is mentioned in brackets next to the company name. As far as possible, consolidated numbers (latest available) have been used for a holistic picture of the company's finances.

Given that the top 500 listed companies are usually the most liquid and well-run, we've restricted the list to the S&P BSE 500 index constituents.

Note: Very large percentage changes in sales and profit are reflective of a change from near-zero or negative value.

Not your garden-variety correction

FACT OF THE MATTER. The crash on November 5, 2026, is notable given the intensity of the correction amid rising friction to the AI theme

Nishanth Gopalakrishnan
bl. research bureau

The AI trade is in a meltdown after Democrats swept the US mid-term elections, over concerns that there could be more regulatory scrutiny of AI and slowdown in the data centre build-out. These have only added on to the risks that were already exisiting but the market refused to acknowledge so far — such as rising cost of capital, absence of revenue potential that justifies the trillions of dollars of capex, and cash flows of hyperscalers draining due to the capex. The mid-term results have now provided the trigger for the market to acknowledge the risks.

In what some experts are now calling as the AI bubble bursting, the tech-laden Nasdaq-100 plummeted 6.4 per cent on November 5, its worst single-day returns since a 12.2-per cent fall during the early days of Covid in March 2020. Its market-cap decline of $2.2 trillion on Thursday is its worst ever. Since its 52-week high on October 6, the index has given up gains of over $5.2 trillion.

Wall Street's fear gauge, the CBOE Volatility Index or VIX, jumped 70 per cent on November 5 — the third highest in history, after the 'Volmageddon' episode of February 2018 and the 74-per cent jump on December 18, 2024, when the market was caught off guard by a hawkish Fed FOMC meeting. Volmageddon was when the VIX climbed 116 per cent on February 5, 2018, when concentrated short volatility trades (will make money if market volatility stays low or falls) set off a negative feedback loop. As VIX rose, traders who were short volatility were forced to cover with long positions, leading to a chain reaction.

Whichever way the US markets trade over the next few weeks, November 5, 2026, is likely to remain a notable day given the intensity of the correction (see below) and rising friction (cost of capital, lack of profitability and questions on viability, regulatory concerns) to the AI theme. Hence, it is important to stay cautious and not treat it like other buy-the-dip episodes of the past six years. Last week's AI crash is not your garden-variety correction.

SEMIs TAKE IT ON THE CHIN

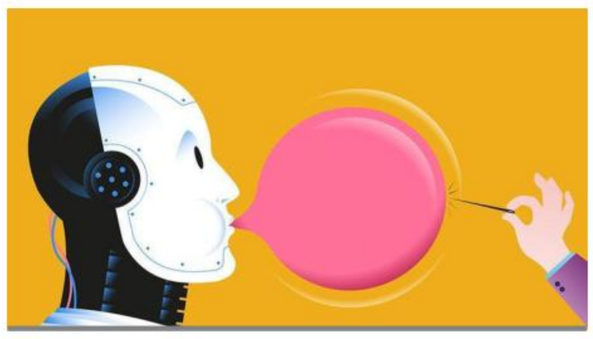

Speaking of individual stocks, semiconductor names were the most impacted. Shares of Sandisk, Micron and Western Digital lost 17-22 per cent on November 5, topping the table. In Sandisk's case, the stock had gained 10x to its 52-week high of $2,354 in June from $237 on December 31, 2025. It has now been reduced to $835. A 10x gain and a subsequent 66-per cent wipeout: all in a span of about 10 months! And bear in mind, this is not a small- or mid-cap stock. It is a large-cap stock with a market-cap of $119 billion!

Other prominent ones such as Nvidia, SK hynix, TSMC and Samsung Electronics also feature in the list. Most of them are down a brutal 40-70 per cent from their 52-week highs.

The iShares Semiconductor ETF (SOXX) fell 12.1 per cent on November 5 — its second worst day in history after a 15-per cent decline during the early days of Covid. Semiconductor/ chip stocks have also given up most of their relative outperformance over software stocks. Look at the graphic that shows the ratio chart of SOXX ETF to IGV ETF. SOXX is proxy for semiconductor stocks, IGV is for software stocks. A ratio of 100 represents chip stocks outperforming software stocks. The ratio which reached a high of 250 by mid-June has now been reduced to 145.

Korean benchmark index, KOSPI, half of which is roughly two chip companies: SK hynix and Samsung, also has lost most of its outperformance over Nifty.

While the mega-cap hyperscalers got away with smaller losses, neo cloud stocks have been decimated. They are down at least two-thirds since their 52-week high.

All fall down

	Share price fall on Nov 5 (%)	Returns since 52-week high (%)	Trailing P/E (x)	FY27 forward P/E (x)
Nasdaq 100	-6.4	-13.9	27.4	17.7
Semiconductors				
Sandisk	-22.3	-64.5	7.1	3.7
Micron	-17.5	-45.0	9.2	3.9
Western Digital	-17.4	-67.0	16.2	10.5
AMD	-17.3	-31.8	103.8	25.8
Seagate	-16.3	-59.7	23.1	11.5
SK hynix	-13.4	-36.3	4.3	2.1
TSMC	-10.8	-23.0	21.7	14.3
Broadcom	-10.4	-40.7	35.2	15.2
Intel	-10.3	-60.5	49.4	31.7
Nvidia	-9.3	-23.3	26.8	19.9
Samsung Electronics	-7.6	-50.3	5.8	2.4
SOXX ETF	-12.1	-37.6		
Neo clouds

Nebius*	-14.9	-56.8	29.0	3.1
Coreweave*	-9.8	-66.4	9.4	2.7

*Since the neo cloud companies are loss making, EV/sales multiple is given instead
Source: Bloomberg

BIZARRE LOW VALUATION

What's bizarre is that these semiconductor stocks have crashed big time while their forward multiples appear cheap. Look at the forward multiples of memory majors Micron, SK hynix, Samsung and Sandisk. Their forward P/E ratios are in single-digits and at least 50 per cent below current P/E. SK hynix's forward multiple is a miniscule 2x! While earnings are expected to be strong, the fact that multiples have derated indicates that the market is getting sceptical of the earnings estimates being met.

Here's something interesting to ponder. On Monday, Marvell Technology, a $150-billion chip design company announced its acquisition of Lumentum Holdings, a manufacturer of laser, fiber-optic parts used in networking, and valued at an enterprise value of $115 billion in the deal. Both are listed and this is an all-stock deal. The enterprise value of Lumentum now stands at $48 billion after the crash — 41 per cent down from October 28, the last trading day before market began speculating the deal. Enterprise value of Marvell, too, is down 44 per cent from the said date.

WHY THIS CRASH IS DIFFERENT

For one, bond yields are elevated, which means higher cost of capital. The US 10-year sovereign yield is now at 4.9 per cent, far higher than what it was during the pandemic crash, for instance (between 0.6 per cent and 0.7 per cent). Ultra-low interest rates was a strong support to buy the dip approach in markets then. That support is lacking today. AI is increasingly becoming a capital-hungry proposition, leaving even the traditionally cash-rich companies such as Alphabet, Amazon and Meta Platforms scramble for capital in the debt and equity markets. The year also saw earlier how such debt issuances are crowding out savings, that led to sovereign yields climbing towards 5.4 per cent.

Here's another interesting data from last week's crash. Typically, when equity markets crash, there is a flight to safety towards treasuries and treasury yields tend to fall. For instance, in early March 2020, when Nasdaq-100 fell 12.2 per cent in a single day, the 10-year yield fell 24 bps on the same day or 25 per cent from previous day close, as investors took refuge in bonds. On November 5, the yield fell just a mere 5 bps or 1 per cent from November 4's close.

In case of neo clouds such as CoreWeave and even Oracle for that matter, it is not only their shares that have got trounced but also their bonds. Take a look at the graphic. The yield spreads of their bonds over comparable Treasury yields have expanded over time, showing the market's growing concerns on their credit worthiness.

Further, the US economy is now more dependent on AI-related capex. In Q1, Q2 and Q3 of 2026, real GDP grew 2.5 per cent, 2.2 per cent and 3.4 per cent respectively. The contribution by private sector investment in information processing equipment and intellectual property products (broad heads under which chips and software fall) to incremental GDP in the said quarters was 65 per cent, 32 per cent and 39 per cent respectively. If the music stops and data centre build-outs slowdown, it may trigger a recession, having a bearing on equity returns. This is notwithstanding the hit to consumption due to the wealth effect, if the market crash deepens.

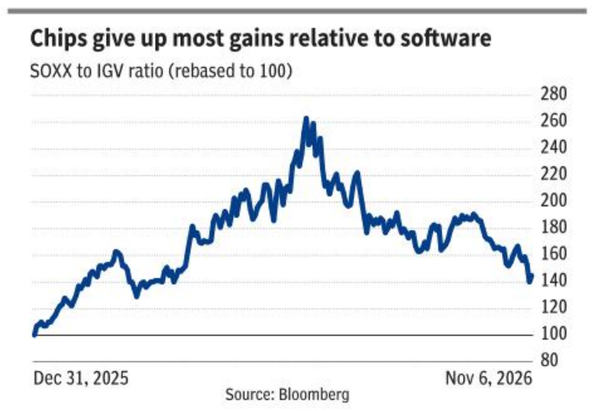

Besides, political resistance towards data centres and regulatory scrutiny on AI could intensify in the coming days. Several newly-elected representatives have called for moratoriums on data centre construction. Meta Platforms President Dina Powell McCormick commented that it is 'going to be harder' to build data centres following the mid-term election, as reported by the *Wall Street Journal*. According to *Reuters*, Representatives Lori Trahan of Massachusetts, Zoe Lofgren of California and Abdul El-Sayed of Michigan have plans to push legislation requiring independent experts to assess whether AI models meet safety standards.

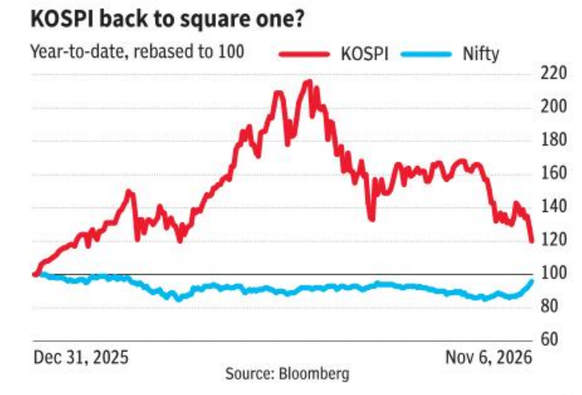

FEELING JITTERS ALREADY

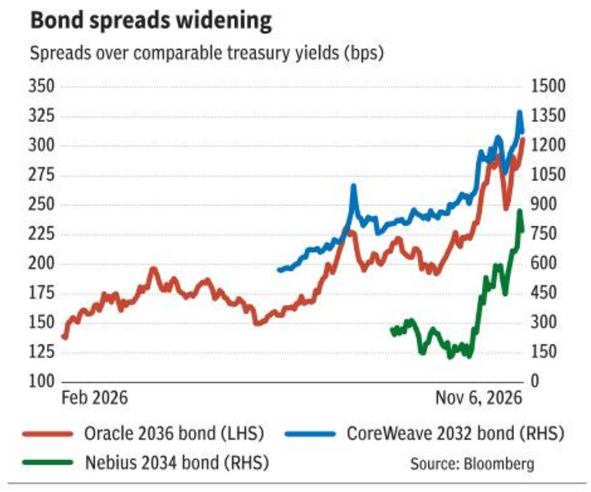

That said, market's nervousness is beginning to show up.

Anthropic is expected to go public in mid-November. According to a *Bloomberg* report, potential investors in its IPO are now looking at giving Anthropic a valuation of $1.1 trillion. Do note that this is a company that was seeking a valuation of $2 trillion only last month. Its peer OpenAI is also in the same boat. Per *Reuters*, the company has raised $11 billion in its latest funding round last week, at a valuation of $1.25 trillion — down from the $1.5 trillion it initially sought.

The tide is definitely shifting as far as the AI trade is concerned. How far and how fast that shift unfolds will be one of the key battles markets could grapple with over the coming months. To some extent, the direction of global markets may hinge on the outcome. While the anti-AI narrative has gained traction, an immediate downturn in the AI trade is more likely to trigger a flight to safety than spark a broad-based rotation into anti-AI themes.

NOVEMBER 5 FACTS

- Nasdaq-100's worst day since Covid
- SOXX ETF's second worst day in history
- CBOE VIX's third highest spike

Shone brighter in Samvat 2082

BASE METALS OUTLOOK. Technical analysis indicate Samvat 2083 may turn out to be a tough year

Gurumurthy K
bl. research bureau

Muhurat trading usually focuses on equities, but it holds equal importance for investors and traders in asset classes such as commodities. Here, we take stock on how the Base Metals and Precious Metals performed in Samvat 2082 and what is in store for them in Samvat 2083.

METALS SHINE

Base Metals have come out as a clear winner against the Precious Metals this year (Samvat 2082). Tin tops the table among the base metals followed by Copper and Zinc. The Tin Futures contract, traded in the London Metal Exchange (LME), has risen 32 per cent this Samvat. The LME Copper on the other hand has risen about 29 per cent. The metal price surged 39 per cent to touch a high of $14,875 per tonne in September and has come down from there. The LME Zinc is up 25 per cent.

On the domestic front, the weakness in rupee has given an additional boost for the metal prices. Zinc leads the table among the metals traded in the Multi Commodity Exchange (MCX). MCX Zinc is up 40 per cent. This is followed by MCX Copper (up 35 per cent) and MCX Aluminium (up 26 per cent).

Dollar weakness aided the metals price initially. However, it was the supply disruption that has been playing out largely on the back of this price rise. The closure of the Strait of Hormuz pushed up the prices of aluminium and copper. Gulf countries contribute about 9 per cent of global aluminium supply. They also supply 50 per cent of the seaborne sulphur, a major component used in copper production.

Apart from this, disruptions due to smelter and mine closures also aided zinc and copper prices specifically.

LOSE GLITTER

The sharp fall in the calendar year 2026 has taken the sheen off the precious metals in Samvat 2082.

Gold and Silver were up 29 per cent and 132 per cent when they touched their respective highs in January 2026. But the sharp fall thereafter has taken out all the glitter from both gold and silver.

On the global front, gold, currently at $4,070 per ounce, is down 6.5 per cent. Silver, at $51.90 per ounce, is down 1 per cent.

Interestingly, on the domestic market, MCX Gold and MCX Silver are up 8.5 per cent and 16 per cent, respectively, due to the rupee weakness.

WHAT NEXT?

Will the base metals outshine in Samvat 2083 as well? Here is our forecast based on technical analysis using charts.

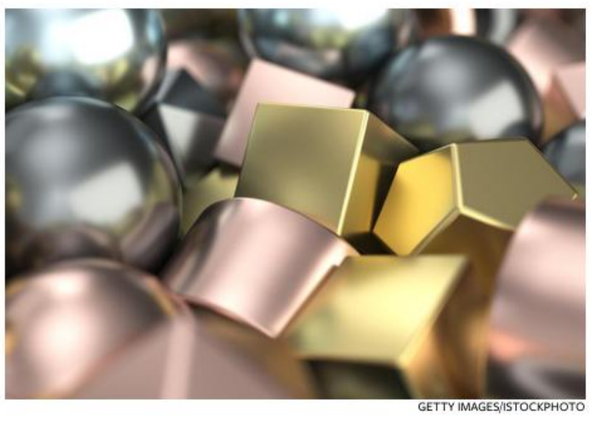

LME Copper ($13,768) has a crucial resistance in the $15,000-15,200 region, which can cap the upside. We expect the price to see a sharp fall to $11,600 or $11,200. After this fall, a bounce back move to $13,500-14,000 is a possibility. To avoid this fall, the price has to breach $15,200 decisively. If that happens, $16,500-16,700 can be seen on the upside.

LME Aluminium ($3,062) has come down sharply after making a high of $3,787 in June. Good resistance is now at $3,450. Support is at $2,970. We expect LME Aluminium to break this support and fall to $2,720-2,700 in the coming months. After this fall, a bounce back move to $3,000-3,100 is a possibility.

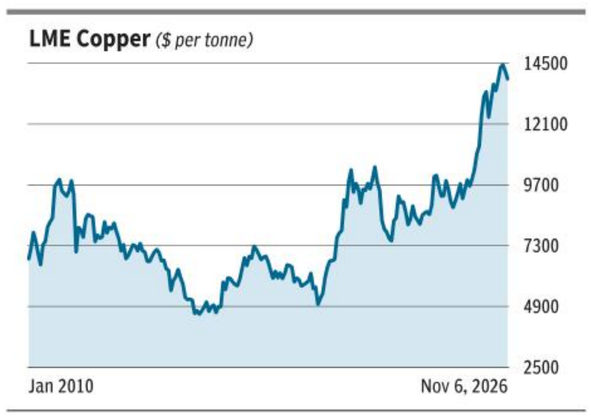

To negate this fall, LME Aluminium has to get a sustained break above $3,450. If that happens, $3,800 and $4,100 levels can be seen.

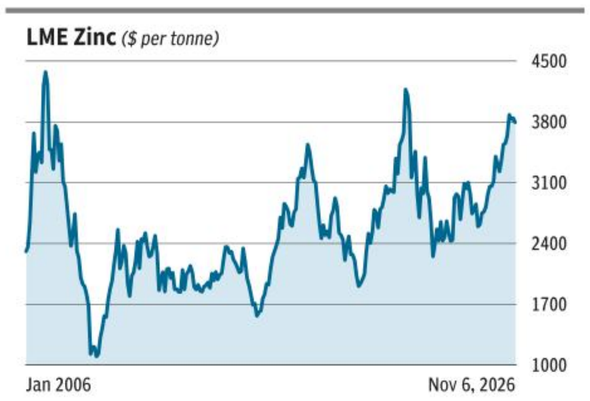

LME Zinc ($3,711) has some more room to rise. Immediate support is $3,680. While that holds, a rise to $4,200-4,250 is possible. After this rise, the price can fall back to $3,800 or even $3,600.

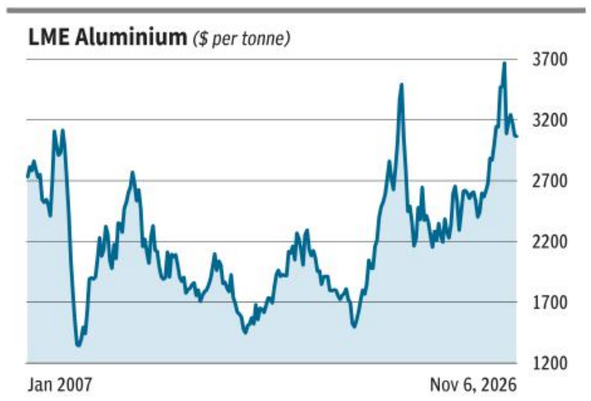

If the price fails to rise above $4,000 from here and instead, breaks below $3,680, the rise to $4,200-4,250 will get negated. In that case, a fall $3,500 or $3,300 is possible.

UP retains top place in number of GST assesses; Haryana adds most

WIDENING BASE. National average rose about 9.5% as automated AI processes broadened registration

Shishir Sinha
New Delhi

Uttar Pradesh continues to lead in the total number of GST assesses at the end of the first seven months of the current fiscal with over 22.68 lakh assesses.

It is followed by Maharashtra and Gujarat. UP has also recorded higher growth than the national average. However, Haryana recorded the highest growth rate with over 13 per cent.

According to data available on the GST portal, as of October 31, the total number of GST assesses was 1.71 crore against around 1.57 crore on October 31 last year, showing an addition of over 14 lakh during April-October.

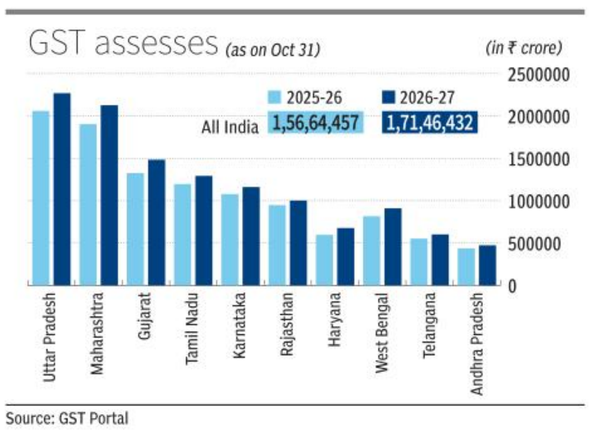

STATE-WISE GROWTH

During this period, among States/UT, Uttar Pradesh and Maharashtra both added over two lakh assesses, while Tamil Nadu and Karnataka followed adding around 96,000 and 83,000, respectively.

Similarly, during this period, the national average growth rate in terms of assesse addition was around 9.5 per cent, while UP recorded a growth rate of over 10 per cent. For Maharashtra, it was over 11 per cent. However, Haryana registered the highest growth rate among the top 10 States and Union Territories, at over 13.6 per cent.

Registration is now granted by the system within three working days, with no officer involved, for applicants assessed as low risk and for those whose output tax on supplies to registered persons does not exceed ₹2.5 lakh a month. Sixty-one per cent of registrations already come through this automated route. The remaining 39 per cent go to an officer.

Now, after the 57th meeting of the GST Council earlier last month, the registration process has been further simplified. Accordingly, the application form guides the applicant, showing only the fields that apply to each and map each document to the purpose it serves. All these measures are likely to further boost the number of assesses.

Source: GST Portal

AI UTILISATION

At the same time, State governments are also initiating measures to get more businesses registered. For example, UP's State Tax Department initiated structured interactions with trade associations and market bodies under the Samvad Karyakram, which enabled systematic identification of enterprises operating outside the tax net.

This ground intelligence has been further strengthened through multi-department data convergence with labour, mining, transport, drug administration, power departments, etc., as well as high-frequency insights from payment gateways and digital commerce platforms, substantially expanding the pool of potential registrants, said state officials.

The state is also using AI-enabled risk engines capable of detecting non-compliance patterns, unregistered business activity and input–output mismatches across supply chains. Machine Learning models will then generate predictive signals of potential registrants, drawing on high-frequency datasets such as e-way bills, digital payments, logistics records and consumption indicators, officials added.

It may be added that under GST, taxpayers are divided between CGST and SGST officers, based on a formula decided by the GST Council to ensure a single interface. The division of assesses between the Centre and States is decided based on the turnover of the assesses on a proportionate basis. The assesses having turnover above ₹1.5 crore are to be assigned in the ratio of 50:50 between the Centre and the respective State, while those with a turnover under ₹1.5 crore must be assigned in the ratio of 10:90, with the balance tilting towards the States.

Cancer drug price cuts kick in from tomorrow; to save ₹3,500 cr annually

Our Bureau
Mumbai

The revised prices on 137 cancer drugs kick in on Monday, bringing annual savings of over ₹3,500 crore, said a note from the National Pharmaceutical Pricing Authority (NPPA).

Drug companies making these medicines were forced to revise prices after the Centre capped trade margins on them at 30 per cent of the MRP, under the Supreme Court's watch.

Giving the latest update, the NPPA said on Saturday that 76 pharmaceutical companies have revised the MRP for 1,225 anti-cancer formulations, covering 121 drugs.

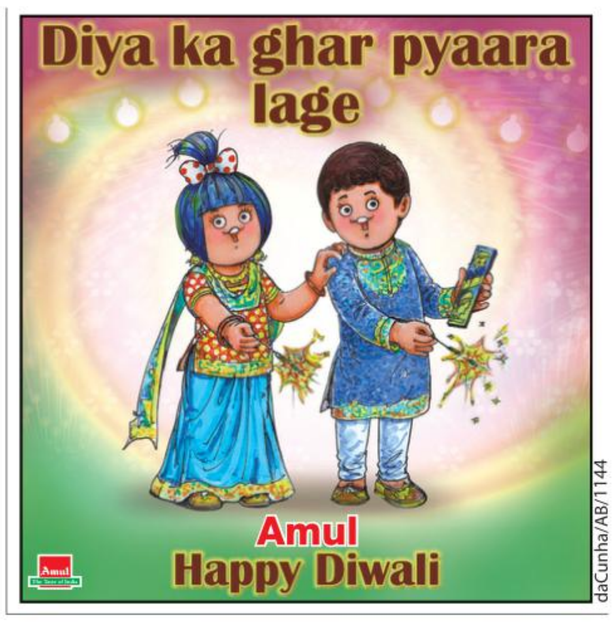

A reduction has been reported in 1,031 formulations of anti-cancer medicines, with 600 brands reporting above 50 percent reduction and the highest reduction being 96.45 percent, the NPPA said.

It said that 10-15 drugs (of the 137) are yet to be launched in India, and the Trade Margin Rationalisation (TMR) will be applicable to them when they are brought into the country.

According to a source, of 1,330 updated prices, 203 brand prices remain unchanged.

"Every retailer, dealer, hospital and institution is required to prominently display the revised MRP list of anti-cancer medicines on their websites and in their premises," the NPPA said.

Some of the medicines seeing a reduction in prices include Bevacizumab 100 mg Injection, Denosumab 60 mg Injection and Abiraterone acetate 250 mg Tablet.

Tata Steel Q2 net rises 18% at ₹3,660 cr on better realisation

Our Bureau
Mumbai

Tata Steel reported a net profit (attributed to owners) in the September quarter of ₹3,660 crore, up 18 per cent from ₹3,102 crore logged in Q2 last year, on the back of better realisation. Revenue increased 12 per cent to ₹64,974 crore (₹58,216 crore). EBITDA was up at ₹10,665 crore (₹9,106 crore). EBITDA per tonne jumped to ₹13,462 (₹11,518 crore).

The company said that Noel Naval Tata will retire as the Non-Executive, Non-Independent Director and Vice-Chairman of the board on November 11.

CAPEX PROJECTS

The firm spent about ₹3,280 crore on capital expenditure in Q2 and ₹6,860 crore in H1. Significant projects underway include 4.8 MTPA capacity expansion at Neelachal Ispat Nigam.

Gross debt of the company increased to ₹1.02-lakh crore against ₹97,985 crore in the June quarter. The firm had cash and cash equivalents of ₹10,301 crore and a mark-to-market gain of ₹644 crore in currency hedge, leading to a net debt of ₹91,423 crore. Group liquidity remains strong at ₹40,076 crore.

CEO and MD TV Narendran said that despite geo-economic uncertainties, the company delivered strong growth in deliveries and earnings, backed by a resilient supply chain and close customer engagement.

Koushik Chatterjee, ED and CFO, said that in the Netherlands, EBITDA improved from €4 million in Q1 to €72 million in Q2, aided by favourable pricing and the restart of the Direct Sheet Plant. But in the UK, subdued demand and elevated inventories across the supply chain weighed on volumes and performance.

TN disbands Kurian panel on Centre-State ties

Our Bureau
Chennai

The Tamil Nadu government has disbanded the high-level committee headed by former Supreme Court Justice Kurian Joseph to study the State autonomy and the Centre-State relations as envisaged in the Constitution.

The Committee was formed in April 2025 by the previous DMK government with the objective of taking steps to get additional powers for the State.

G.O. RECONSTITUTED

The G.O. by the new TVK government said the Tamil Nadu State Law Commission was reconstituted on August 7 and is entrusted, among others, with the broad mandate to examine and make recommendations on matters relating to Inter-State and Centre-State relations along with other subjects, review the existing laws and improve the legal and institutional framework of the State.

The Committee (headed by Kurian Joseph) was constituted to examine and review the provisions of the Constitution, along with existing laws and orders impacting Union-State relations across various domains, and to suggest appropriate remedial measures to the Government.

This Committee is a non-statutory body examining various issues relating to Union-State relations and has a considerable similarity and overlap in the nature and scope of the functions entrusted to the Tamil Nadu State Law Commission.

Therefore, after careful consideration, the government has decided to discontinue the services of the High-Level Committee with immediate effect, the G.O. said.

The Secretary and Committee Officer of the Kurian Committee are directed to hand over all the records and papers to the Tamil Nadu State Law Commission immediately and to communicate this order to all concerned and report compliance to the government, the G.O. said.

Bharat Ratna LK Advaniji at 100!

NARENDRA MODI

Shri Lal Krishna Advani Ji enters the hundredth year of his life today, 8th November. This year, his birthday fittingly coincides with Diwali, a festival associated with Prabhu Shri Ram and the Diya at a time when we are marking 75 years since the inception of the Jana Sangh, 125th Jayanti of Dr Syama Prasad Mookerjee, and recently celebrated a hundred years of the RSS.

There are very few people whose lives have touched so many different chapters of modern India. Advaniji was born on 8th November 1927, on Dev Deepawali. As a youngster in 1947, he experienced the pain of leaving behind his familiar world in Sindh. He rebuilt his life from scratch. This trait was seen while he was strengthening the Jana Sangh and later building the BJP.

His tenures as BJP President saw the Congress falling sharply from 400 to below 200 in 1989 and the BJP becoming the single largest party for the first time in 1996.

Two qualities always set Advaniji apart as a leader. First, his ideological clarity and intellectual sharpness. This was reflected in his speeches and writings. The Jana Sangh and BJP resolutions he authored remain worth reading even today. Second, the manner in which he exposed the pseudo-secularism propounded by a large section of the Indian polity for many years.

POLITICAL LEGACY. Two generations shaping India's changing political landscape

Advaniji took up every responsibility with immense diligence. As an RSS Pracharak, Advaniji first worked in different parts of Rajasthan. From there, he went to the national capital, where he started working closely with Atalji. Together, they changed the course of Indian politics.

The Delhi that Advaniji came to was coming to terms with the horrors of Partition. He immersed himself in making the Jana Sangh stronger. In 1967, Advaniji became the Chairman of the Delhi Metropolitan Council.

PARLIMENTARIAN

In 1970, Advaniji's Parliamentary innings began. His interventions have won appreciation across the political spectrum. He made a mark as an MP and later, as Leader of Opposition in both Houses and from the Treasury Benches too. I vividly recall the 1991 Lok Sabha elections. It was decided that Advaniji would contest from two seats, one of which was Gandhinagar. He had an old link with Gujarat. His father had settled in Kutch after Partition. Advaniji had also served as a Rajya Sabha MP from Gujarat. I had the honour of helping prepare his papers and assisting him throughout the campaign.

EMERGENCY CRISIS

Emergency was a watershed moment in Advaniji's life.

He was at the forefront of saving democracy and protecting the Constitution. His experiences found their way into his book, *A Prisoner's Scrap-Book*. One part of that book, titled 'A Tale of Two Emergencies', beautifully explained the striking similarities between the events in India starting June 1975 and those in Nazi Germany in 1933.

When the Janata Government came to office in 1977, Advaniji became Minister for Information and Broadcasting. As Deputy Prime Minister and one of India's longest-serving Home Ministers, he was instrumental in strengthening India's security apparatus. He ensured India got a tough anti-terror law.

RATH YATRA

An iconic moment in Advaniji's life was the Somnath to Ayodhya Rath Yatra. It changed the course of Indian society for the better. I consider it a privilege that I got the opportunity to be involved in this Yatra from the ideation stage to execution. Being present at Somnath when the Yatra began was particularly special. I also have memories of the saddening moments of Advaniji's arrest in Bihar.

There is so much more of Advaniji that is outstanding. His simplicity, for example. After the Navnirman Movement, Advaniji came to Junagadh and stayed for a month as an ordinary Karyakarta, preparing the Party for the Assembly elections in which the Congress was rejected.

He has always shown what probity in public life is about. He is a voracious reader. Those who have spent time with him know how carefully he goes through newspapers. He is a big fan of cinema and theatre, and has been an enthusiastic film critic. His sense of history and the need to preserve it is visible in his book *My Country My Life*.

Advaniji always remained in touch with the Sindhi culture. Another effort he undertook was the popularisation of Sindhu Darshan Puja near Leh.

Growing up in Karachi, Advaniji could hardly have imagined the path his life would take. In an expression of gratitude, the people of India conferred upon him the Bharat Ratna in 2024. As Advaniji enters the hundredth year of his life, I pray that he be blessed with good health and that he continues to inspire us all as he has always done.
