

Couple killed in Usmanpur roof collapse

The Hindu Bureau
NEW DELHI

A couple were killed after the roof of their rented house collapsed in north-east Delhi's Usmanpur on Sunday night, the police said on Monday.

The victims, Tinku, 32, and Urmila, 30, were trapped under the debris after the roof of the single-storey house caved in. They were pulled out and taken to Jag Pravesh Chandra Hospital, where doctors declared them dead, the police said.

The Delhi Fire Services said it received a call at 10.31 p.m. reporting the incident and rushed three water tenders to the spot. The collapsed area measured about 120 sq. ft.

The police said the bodies have been sent to Guru Teg Bahadur Hospital for post-mortem.

A case has been registered against the house owner, Virender Kumar, under Sections 290 and 106(I) of the Bharatiya Nyaya Sanhita.

Further investigation is under way, the police said.

Set up pilot camps to sterilise stray dogs: HC to civic bodies

Want to allay fears among animal lovers, encourage community participation, court says; it orally suggests leaving a small proportion of stray dogs unsterilised so that they don't disappear entirely

The Hindu Bureau
NEW DELHI

The Delhi High Court on Monday directed the Municipal Corporation of Delhi (MCD) and the New Delhi Municipal Council (NDMC) to identify one ward each in their jurisdictions and organise camps to sterilise and vaccinate stray dogs.

A Bench of Justices Dinesh Mehta and Rajnish Kumar Gupta said the drive must be undertaken as a pilot project in consultation with *amicus curiae* Gauri Maulekhi, a noted animal welfare strategist.

The court asked the civic bodies to widely publicise the camps and display placards clarifying that stray dogs brought to the camps would not be captured or sent to dog pounds. The objective, the Bench said, was to allay fears among animal lovers and encourage community participation.

The two-judge Bench asked the MCD and NDMC to display placards clarifying that the strays wouldn't be sent to dog pounds. FILE PHOTO

The Bench also made an oral observation that authorities should consider ensuring that a small proportion of stray dogs remains unsterilised so that the population does not disappear entirely over time.

It suggested that the civic bodies could themselves propose leaving at least 5% of the stray dog population unsterilised.

The directions were issued during the hearing of a *suo motu* public interest

litigation plea initiated to monitor compliance with the Supreme Court's orders to remove stray dogs from educational institutions, hospitals, railway stations, bus stands, and other public places.

49,424 strays sterilised
The MCD told the court that its Animal Birth Control (ABC) centres are functioning across eight zones while approvals to set up ABCs are pending for three

other zones where sterilisation work is currently being handled by centres in the neighbouring zones.

A total of 49,424 stray dogs were sterilised and 52,457 vaccinated through 14 ABCs in the first six months of the year, the MCD told the court.

Microchipping dogs
On being asked about the city's stray dog population, the MCD counsel said while no official census has been conducted, the number is estimated to be around 8 lakh. The counsel suggested that the proposed pilot project could also include microchipping of sterilised dogs to facilitate better tracking and data collection.

With regard to rabies surveillance and management, the Delhi government stated in an affidavit that as per official data no case of rabies was reported in the city between April 1 and June 30.

Lakshmi Yojana eligibility norms restrictive: Kejriwal

The Hindu Bureau
NEW DELHI

Aam Aadmi Party (AAP) national convener Arvind Kejriwal on Monday accused the Bharatiya Janata Party (BJP) government of imposing "restrictive" eligibility rules under the Delhi Lakshmi Yojana to limit the number of women eligible for the scheme's monthly assistance of ₹2,500.

He alleged that with the number of restrictions imposed, "not even 10% of Delhi's women" would be able to avail of the scheme.

On August 1, Chief Minister Rekha Gupta had opened registrations for the scheme. Under the rules, applicants must obtain an endorsement letter from their MLA or MP, and only one woman from each family is eligible to receive the monthly aid.

"It is clear that they want to extend this benefit only to BJP supporters. The conditions they have imposed, including the requirement of 10 years' residence and approval from their MP or MLA, show

Arvind Kejriwal alleged that not even 10% of Delhi's women would be able to avail of the scheme. FILE PHOTO

that their intention is not to provide the benefit but merely to play politics," Mr. Kejriwal said.

'No exclusion in Punjab'
He claimed that the AAP government in Punjab had not imposed any such conditions and that if there were four women in a household, all of them received the assistance. "We made no distinction between the rich and the poor or on the basis of caste. Just as we are extending the benefit to everyone in Punjab with a clear and honest intent, they should do the same in Delhi if their intentions are

genuine," he said. Delhi secretary of the Communist Party of India (Marxist) Anurag Saxena also alleged that the scheme is not for women's economic empowerment, but a "political deception" aimed at excluding a large section of poor women from receiving assistance.

"The eligibility conditions and mandatory documentation make it evident that the scheme has been deliberately designed to restrict rather than expand access to benefits. The most objectionable provision is the requirement that every applicant must obtain a recommendation from the local MP or MLA," Mr. Saxena said.

Delhi BJP spokesperson Praveen Shankar Kapoor had earlier said it was the previous AAP government in Delhi that made the recommendation of MLAs mandatory for some schemes in 2018. He had asserted that the BJP government will ensure that every eligible woman resident receives the benefits of the scheme within the next three years.

UNION TERRITORY OF JAMMU & KASHMIR

OFFICE THE EXECUTIVE ENGINEER PWD (R&B) DIVISION JAMMU EAST

SHORT NOTICE INVITING TENDER

Short e-NIT No. 37 of 2026-2027/Jammu East Dated 01-08-2026

For and on behalf of the Lieutenant Governor, Union Territory of Jammu and Kashmir e-tenders are invited on percentage basis from approved and eligible Contractors registered with Union Territory of J&K, CPWD, Railways, MES and other State / Central Govt. for each of the following works :-

S. No	Name of Work	Name of Division	Advertised Cost (Rs in Lacs)	Cost of document (in Rs)	Earnest Money (in Rs)	Time Allowed for Complete -on	Time and date of opening of tender	Class of Contractor
1	Repair & renovation of Govt. Girls High School Dogra hall Jammu	PWD (R&B) Division Jammu East	65.20	600	2% of Advertised Cost	03 Months	(1300 Hrs) on or after 10-08-2026	A
2	Repair of Roof Top of Administration Block, JKBOSE Rehani Colony Jammu	PWD (R&B) Division Jammu East	9.31	600	2% of Advertised Cost	02 Months	(1300 Hrs) on or after 10-08-2026	A,B,C&D

Modernising mandis priority of govt.: CM

The Hindu Bureau
NEW DELHI

Chief Minister Rekha Gupta on Monday reviewed redevelopment projects across agricultural markets and said "modernising mandis (markets) is a priority of the government".

Ms. Gupta also reviewed the progress of the poultry market being developed on nearly 15 acres in Ghazipur at ₹193.29 crore. Its construction began in March 2019 and is scheduled to be completed by December 31 this year. According to the Chief Minister's Office (CMO), about 85% of the work has been completed, and the market will have shops for 100 wholesale traders and 120 processing units.

The Chief Minister reviewed the proposed flower market at the Integrated Freight Complex in Ghazipur.

"Ten acres had been acquired from the Delhi

Chief Minister Rekha Gupta chairing a review meeting on Monday. ©CMODELHI

Development Authority in 2001 and the modern flower market is planned to be developed in phases," stated the CMO.

Donation centres

Ms. Gupta also inaugurated an 'Arpan Kendra', a donation centre for old clothes, at Punjabi Bagh West metro station. According to the CMO, the donation centres are being set up at 10 major metro stations. As part of the first phase, Arpan Kendras were launched at five metro stations: Shalimar Bagh, Punjabi Bagh West, Mayur Vihar Phase-1, Shahdara, and Rohini West.

Won't allow Kejriwal's march to PM house: police

Press Trust of India
NEW DELHI

Aam Aadmi Party (AAP) national convener Arvind Kejriwal's proposed march to Prime Minister Narendra Modi's residence on Tuesday to submit petitions against E20 fuel will not be allowed, police sources said on Monday.

A police source said no permission has been granted for the march and security arrangements are being made to prevent any unauthorised procession.

Mr. Kejriwal had announced that he would march to Mr. Modi's residence along with 100 people to submit petitions against E20 petrol, alleging that the Centre was pushing the blended fuel under pressure from U.S. President Donald Trump.

He also alleged that the government's continued push for ethanol-blended petrol suggested that there was a "hidden agenda".

Protester, mother in hiding after continued harassment over 'abusive' remarks on PM

Suruchi Kumari
NEW DELHI

For the past three days, the protester against whom a zero FIR was registered last week for her "abusive" remarks on Prime Minister Narendra Modi, and her mother have been living at an undisclosed location out of fear.

On July 31, the same day that the PM spoke of forgiving "misguided children" who had used abusive language at the 36-day Jantar Mantar stir, where the protester had joined other protesters against the alleged NEET paper leak, she had uploaded an apology video on social media. "We hoped it would end the harassment," her mother told *The Hindu*. Instead, the harassment intensified.

"I am fed up. I have lost my work. We had no

They can't leave the place where they are staying right now. They are under complete lockdown

ANIL KUMAR
Family's lawyer

option but to leave our house because police personnel and strangers started showing up," said the mother, who earns her living by giving tuitions at home and has been raising her daughter by herself since her husband's death in 2019. "We don't know when things will become normal or when we will be able to return home," she added.

Their lawyer, Anil Kumar, said, "They cannot leave the place where they are staying right now. They are under complete lockdown."

He claims that all details in the zero FIR registered on July 29, including the accused's name and age, are wrong, and that she is 15, not 25 as mentioned in the FIR.

Address shared online

"The only thing that was correct was the address, which they [complainant] probably found circulating online. The two had no option but to leave their home," he said. The lawyer added that no one from Delhi Police has contacted them since the case was transferred from Noida to the Parliament Street police station.

When reached for comment, DCP (New Delhi) Sachin Sharma said a regular FIR in the case has not yet been registered. "We will conduct a preliminary investigation and then take a call," he said.

Delhi Police moves against misleading social media handles

Lavpreet Kaur
NEW DELHI

The Delhi police have initiated legal action against social media handles accused of circulating misleading videos falsely suggesting that protests were continuing at Jantar Mantar in New Delhi. The police have issued takedown notices to Meta and X.

The action follows the circulation of dozens of videos across social media platforms claiming to show “live” protests at Jantar Mantar until August 3, despite the Cockroach Janta Party (CJP) agitation having ended over a week earlier. Several of the clips garnered millions of views, prompting various departments to inquire from the police whether fresh demonstrations had resumed.

Speaking to *The Hindu*, a senior New Delhi police officer said the process of removing the content was under way. “We have verified that no such protests have happened and issued takedown notices to Meta

Some handles are circulating videos falsely suggesting that protests are still on at Jantar Mantar, the police say

and X for the removal of the misleading content. We have also started identifying the handles and warning them of legal action if the behaviour continues,” the officer said.

The officer said no First Information Report had been registered so far.

The government’s fact-check unit has also stepped in to counter the viral claims. The Press Information Bureau Fact Check Unit said videos being circulated under titles such as “Jantar Mantar Season 2” and “Jantar Mantar protest session 2.0” falsely claimed that protests had resumed in New Delhi. “The viral videos are old, and an attempt is being made to mislead people by sharing them,” the unit said, urging the public to remain cautious while sharing unverified content online.

School van vandalised in U.P.; colleges, schools shut amid Kanwar Yatra

Lucknow police book 3 unidentified persons; educational institutes in Meerut, Ghaziabad, Baghpat dists. to remain closed till Aug. 12; Baghpat admin. warns of action against violation of closure order

Mayank Kumar
LUCKNOW

A police officer keeping watch with binoculars from an elevated observation post during the Kanwar Yatra, in Meerut on Monday. ANI

A school van carrying students was attacked with stones and vandalised in Lucknow on Monday by a group of men said to be part of the ongoing Kanwar Yatra.

Lucknow Police has booked three unidentified individuals after the incident. The police, however, have not confirmed the identity of the drivers.

The driver of the van told the police that a group of bike-borne youths threatened to kill him before fleeing, officials said, adding that a case has been registered under Sections 131 (attack another person without any reason) and 351(2) (criminal intimidation) of the Bharatiya Nyaya Sanhita. “At Charak Crossing under Chowk police station today morning, three unidentified people vandal-

ised a school van. On getting information, police reached the spot. But the unidentified drivers had fled. Strict action will be taken against the guilty,” said Lucknow’s Deputy Commissioner of Police (West) Kamlesh Kumar Dixit.

Videos of the vandalised vehicle doing the rounds on social media showed that the window glass was smashed and schoolgirls were standing on the street crying. The visuals invited widespread online outrage.

“Shravan is a holy month for the people of Sanatana faith, but some anti-social elements try to fuel unrest in the grab of *kanwariyas* and create division on communal lines. The fact is such elements are being tactically nurtured by a section of the ruling dispensation for political gains,” said Anil Yadav, a senior Uttar Pradesh Congress leader.

Meanwhile, officials said educational institutions in Meerut, Ghaziabad and Baghpat districts will re-

main closed till August 12 in view of the heavy movement of *kanwariyas*. In Meerut, the district administration said the decision was taken to ensure students’ safety and facilitate traffic management.

Ghaziabad and Meerut administrations said examinations already notified for any course or subject would be held as scheduled and be exempt from the closure order.

Muzaffarnagar had earlier announced the closure of all schools and colleges from August 3 to 10 for similar reasons. Meat shops and restaurants along Kanwar routes were also ordered to remain shut till August 12. Besides, several entry and exit gates of 17 Namohar stations between Ghaziabad and Modipuram will remain closed from August 4-12, the National Capital Region Transport Corporation said.

Woman teacher stabbed to death in Faridabad school; accused arrested

The Hindu Bureau
GURUGRAM

A 32-year-old woman teacher was stabbed to death allegedly by a stalker inside a private school in Faridabad on Monday morning. The police arrested the accused, identified as Amit, a resident of Kot village, within two hours of the incident.

According to the police and eyewitnesses, Mr. Amit entered the school in Sik-

rauna village wearing a mask around 10 a.m. and made his way to the staff room. He spoke to the teacher for a few seconds before pulling out a knife and suddenly attacking her. Hearing her screams, other staff members rushed to the spot and attempted to intervene. The assailant, however, managed to flee. The teacher was rushed to the Civil Hospital, where doctors declared her dead on arrival.

I-Day security: Delhi Police uses eParikshan app to identify 14,000 premises along Red Fort route

The Hindu Bureau
NEW DELHI

As part of enhanced security arrangements ahead of Independence Day, Delhi Police has identified at least 14,000 households,

shops, and offices located near the route to be used for VIP and other movement during celebrations at Red Fort on August 15.

According to senior officials, the data was obtained using the ePariksh-

an app and will be shared with the Special Branch for identification of people with criminal antecedents.

According to officials, the app is used by Delhi Police internally to verify and digitise premises and

occupants. During field visits, police personnel use the app to assign a unique Premises Identification Number to each house and record details of residents, tenants, domestic helps or employees.

Not private land, says SC, restores gram panchayat rights over 436 bighas in Gurugram after 19 years

Press Trust of India
NEW DELHI

The Supreme Court on Monday restored the ownership of over 436 bighas of land in Gurugram to a gram panchayat while set-

ting aside a 2007 Punjab and Haryana High Court judgment that had recognised private ownership claims. In a landmark ruling, a Bench comprising Justices Sanjay Kumar and K. Vinod Chandran said,

“Land is considered the ‘new gold’. More so, when such land is proximate to expanding urban agglomerations like Gurugram.” Justice Kumar held that the disputed land constituted “*shamilat deh*” (village

common land) under the Haryana Common Lands (Regulation) Act, 1961. It held that the HC erred in treating it as private because the records reflected the names of village “*pat-tis*” (proprietary groups).

Lamp row: SC agrees to hear T.N.’s plea, but refuses relief

The Hindu Bureau
NEW DELHI

The Supreme Court on Monday decided to examine a petition filed by the Tamil Nadu government challenging orders passed by the Madras High Court on lighting a lamp at a stone pillar near a dargah on the Thirupparankundram hill.

A Bench issued notice to the Madurai Collector, the Joint Commissioner of the Hindu Religious and Charitable Endowments (HR&CE) Department and others on a plea filed by the Commissioner, HR&CE, Chennai.

The Bench refused to grant any interim relief and said the case would be heard after the respondents filed their affidavits in six weeks. It listed the case for hearing in eight weeks.

SCHOOL HOSTS ANNUAL EXHIBITION

Apeejay School, Pitampura, hosted their Annual Exhibition on the theme "From Indus to AI: A Journey of Civilization, Innovation and Imagination," graced by Novita Jindal, Department of Computer Science, Keshav Mahavidyalaya, and Dr. Shashank Shekhar Sinha, Publishing Director, Routledge (South Asia). The exhibition featured working models and research displays tracing India's journey from the Indus Valley to Artificial Intelligence, alongside a cultural programme of skits, folk dances and a futuristic AI performance. Principal Mrs. Veena Goel applauded the students' efforts, calling it a reflection of heritage and innovation.

GIRLS' FOOTBALL CHAMPIONSHIP WON

Birla Balika Vidyapeeth (BBVP), Pilani, emerged champions of the IPSC Pre-Subroto Cup Under-17 Girls Football Championship, defeating Pinegrove School, Dharampur, 3-0, while Vidya Devi Jindal School, Hisar, took third place. Ms. Happy Khichar, Indian women's cricketer, inaugurated the tournament, and Ms. Babita Meena, Rajasthan Senior Women's Cricket Team member, presented trophies. Unnati Chandel, Pallavi Pal, and Rinyum Dhoka (all BBVP) won Player of the Match, Best Defender and Top Scorer respectively; Jannat (Pinegrove) was Best Midfielder. BBVP will now represent IPSC at the Subroto Cup International Tournament.

BOYS' FOOTBALL TOURNAMENT

Vidya Niketan Birla Public School (BPS), Pilani, hosted the grand opening of the All India IPSC Under-17 Boys' Football Tournament 2026, bringing together teams from schools of the Indian Public Schools' Conference. Mrs Pooja Sihag, Commonwealth Games bronze medalist and freestyle wrestler, was Chief Guest, while Major General S. S. Nair (Retd.), AVSM, Director, Birla Education Trust, was Guest of Honour. Principal Mrs Kajal Marwah welcomed the dignitaries with floral bouquets. The five-day tournament will showcase young footballers' sporting talent, discipline and team spirit.

The Moradabad Divisional Commissioner's court on Monday extended till August 10 the interim stay on the proposed demolition of 38 buildings at Mohammad Ali Jauhar University in Rampur, providing temporary relief to the institution in the long-running dispute with authorities. Divisional Commissioner Anjaneya Kumar Singh, after hearing both sides, allowed the earlier interim order to continue and fixed August 10 as the next date of hearing. The dispute stems from a July 15 order by the Rampur Development Authority, directing the university administration to demolish 38 of its 40 buildings within 15 days. PTI

Former two-time MLA Dalbir Singh Verka joined the Amritpal Singh-led Akali Dal Waris Punjab De in Amritsar on Monday. Mr. Verka joined the party with his brother Vikramjit Singh Kotla, a member of the Shiromani Gurdwara Parbandhak Committee. Welcoming the duo into the party, Akali Dal Waris Punjab De officiating chief Tarsem Singh, father of Khadoor Sahib MP Amritpal Singh, said the induction of Mr. Verka and Mr. Kotla would strengthen the party in Punjab ahead of the 2027 Assembly poll. Mr. Verka began his political career with the Congress and was first elected to the Punjab Assembly from the Verka constituency (now Amritsar East) in 1985. ^{PTI}

HC grants bail to 9 accused of attacking ED officials

The Hindu Bureau
KOCHI

The Kerala High Court has allowed the bail petitions of nine accused in the attack on Enforcement Directorate (ED) officials during a raid on former Chief Minister Pinarayi Vijayan's residence in May. Justice Kauser Edappagath granted bail to the accused, reasoning that they had been in remand for more than 60 days and that they had no criminal history.

The court noted that, according to the case diary, the accusation against the petitioners was very serious and it showed a pre-meditated criminal act. However, the investigation was in its final stage, with fingerprints of the 25 accused sent for analysis.

Rain toll rises to 18 in Kerala; over 13,000 in relief camps across State

CM Satheesan says the situation in most districts is now under control following a decline in rainfall; urges residents in vulnerable locations to relocate immediately; announces rehabilitation package; ₹8 lakh to be given to families of deceased

The Hindu Bureau
THIRUVANANTHAPURAM

Heavy showers continued to batter parts of Kerala for the third consecutive day on Monday, taking the death toll to 18, despite a considerable reduction in the intensity of rain.

Chief Minister V.D. Satheesan, who chaired an emergency meeting on Monday morning to review the flood situation, said the situation in most districts was now under control following a decline in rainfall. However, 18 people have lost their lives in rain-related incidents, while three others remain missing, according to official figures.

Residents of Kannadikkal vacating their houses after water levels in the Poonoor River in Kozhikode rose on Monday. K. RAGESH

A total of 13,496 people are currently sheltering in 363 relief camps across the State.

Addressing a press conference after a review meeting, the Chief Minister said teams of the Fire and

Rescue Services and the National Disaster Response Force (NDRF) had been deployed in the worst-affected areas, including Pathanamthitta and Kottayam, to carry out rescue operations.

Preparations have been completed to air-drop food packets to people stranded in isolated areas. Mr. Satheesan urged residents in vulnerable locations to relocate immediately as instructed by authorities.

The government has announced a total compensation of ₹8 lakh for families of the deceased, with an immediate assistance of ₹10,000 to meet funeral expenses. Families returning from relief camps will be provided ₹10,000 to clean their houses. For a ration card-holding family that lost its livelihood, ₹300 each will be provided to two members until normalcy returns. As part of the rehabilitation package,

assistance for purchasing land and constructing a house has been increased from ₹10 lakh to ₹12 lakh, while compensation for those who have lost their houses has been raised from ₹4 lakh to ₹6 lakh.

Mr. Satheesan said the flooding was triggered by extremely heavy rainfall, with some places recording over 350 mm of rain. He clarified that no major dams had been opened because of the heavy rainfall. Only smaller dams with comparatively lower storage capacity, such as Moozhiyar, had released water.

The India Meteorological department (IMD) issued an orange alert for 12 districts for Tuesday.

SC summons officials over Arunachal govt. not cooperating with CBI investigation

Aaratrika Bhaumik
NEW DELHI

The Supreme Court on Monday summoned the Arunachal Pradesh Chief Secretary and Principal Secretary (Home) after the Central Bureau of Investigation (CBI) alleged that the State government had failed to cooperate with its probe into allegations that Chief Minister Pema Khandu had favoured firms linked to his family members in the award of government contracts over the past decade.

A Bench of Justices Vikram Nath and Sandeep Mehta was examining a status report filed by the Central agency pursuant to the court's earlier directions when it was informed that the Arunachal Pradesh government had not cooperated in providing records sought by the CBI during its preliminary inquiry.

Taking note of the agency's report, the Bench directed both senior officials to appear before it on August 24, 2026, and explain the State government's alleged failure to comply with the court's earlier directions.

The order was passed in a Public Interest Litigation filed by the Save Mon Region Federation and Voluntary Arunachal Sena, alleging that several high value contracts for development works in Tawang district were awarded to firms linked to the Chief Minister and his family members.

Earlier, the top court

The CBI has alleged that the State govt. failed to cooperate with its probe into contracts linked to CM Pema Khandu's family members. FILE PHOTO

had directed the State government to produce records relating to all contracts awarded across Arunachal Pradesh to the firms named in the petition.

Questions delay

On Monday, Justice Mehta questioned Additional Solicitor General K.M. Nataraj, appearing for the CBI, on the progress of the preliminary inquiry and asked whether the agency was giving a "long rope" to the Chief Minister despite having collected sufficient material.

Mr. Nataraj informed the Bench that the State government had not been cooperating with the inquiry and was yet to furnish all the documents sought by the agency.

"The government is yet to furnish all the requisite documents... We will initiate steps in the proper manner. Let the State government cooperate," he submitted.

Karnataka Cabinet expanded amid protests, rebellion

The Hindu Bureau
BENGALURU

The D.K. Shivakumar-led Congress government in Karnataka on Monday expanded the Cabinet inducting 19 legislators. While eight of the new Ministers are first-timers, six from the former Chief Minister Siddaramaiah's Cabinet have been retained.

Though the name of A.V. Gayatri Shanthegowda figured in the initial list of legislators, ultimately, she was not sworn in. The Cabinet does not have repre-

sentation for women.

The party initially decided to fill up the entire Cabinet quota of 34, but eventually kept one berth vacant after pressure mounted. The list was modified hours before the swearing in.

The party has also named its candidates for the posts of Speaker and Deputy Speaker in the Legislative Assembly and Chairman and Deputy Chairman in the Legislative Council.

B. Nagendra, who had resigned from former Chief

Minister Siddaramaiah's Cabinet after his name surfaced in the multi-crore financial scam in Valmiki Development Corporation and later arrested, has

made a comeback.

The Cabinet expansion has triggered widespread discontent in the ruling Congress. Yashwanthraya-gouda Patil, three-time

MLA from Indi, resigned as Assembly member, while Sagar Belur MLA Gopalakrishna also announced that he would resign on Tuesday.

Several senior legislators openly expressed disappointment over their exclusion.

"We will create one or the other opportunity and legislators have to remain patient," the Chief Minister said, appealing to the legislators.

The anger quickly spilled onto the streets, with supporters staging

protests outside Legislators' Home in Bengaluru, burning tyres in some constituencies and raising slogans against the party leadership.

Political functionaries observed that last-minute changes to the Cabinet list reflected differences among Mr. Shivakumar, former Chief Minister Siddaramaiah, and the Congress high command.

Apparently irked over the list of Ministers, Mr. Siddaramaiah did not attend the swearing-in ceremony at Lok Bhavan.

INBRIEF

Kerala HC allows two officials of MSC Elsa 3 to return home

The Kerala High Court has allowed the Chief Officer and the Second Engineer of *MSC Elsa 3*, a Liberia-flagged vessel, to return to their home countries. The ship sank off Alappuzha's coast in May 2025, causing extensive marine pollution across the shores of Kerala and Tamil Nadu. The ship's crew members had been detained in Kochi for over a year. The court directed the two crew members to execute a simple bond for ₹10 lakh or a cash deposit of ₹1 lakh before the Judicial First Class Magistrate, Kochi, with an undertaking that they would cooperate with the trial.

KRS dam crosses 100 ft. as rains hit south Karnataka

In the span of a week, water level in the Krishnaraja Sagar (KRS) reservoir in Mandya district of Karnataka, across the river Cauvery, has gone up by nearly 10 feet. On August 3, the water level breached the 100-foot mark against the maximum level of 124.80 feet with the inflow remaining steady following incessant rain in its catchment areas. The water-level was 100.34 feet at 8 a.m. on August 3. The revival of monsoon and improved storage levels in reservoirs across the Cauvery basin has brought much-needed relief to farmers.

A.P govt. launches inquiry into 3 tiger deaths in reserve

Three tiger deaths reported within less than three weeks in July have raised fresh concerns over wildlife protection in Andhra Pradesh, prompting the State to order a high-level inquiry into the incidents in the Nagarjunasagar Srisailem Tiger Reserve. The recent deaths were reported from deep forest areas within the reserve. A senior forest official said that the causes of the deaths were under investigation and that the State government had constituted a committee to ascertain the reasons.

DU student alleges Meta restricted four CJP protest videos

The Hindu Bureau
NEW DELHI

A Delhi University (DU) student, whose 'Vastegunahuiyan' video went viral during the Cockroach Janata Party (CJP) protest, alleged on Monday that Meta had made at least four of her Instagram videos unavailable in India.

In an Instagram video, Sakshi said three videos were restricted citing 'community guidelines', while a post was removed for "adult sexual exploitation and nudity". The restricted videos included one in which she imitated a

police announcement declaring something illegal, another showing a truck carrying food for police after the July 20 lathi charge, and one featuring members of SFI singing about youth unemployment. She also said a video on Junaid – who gained fame for offering food to protesters at Jantar Mantar – and his family's alleged treatment by the police had been affected. "I do not know which community guidelines have I violated. On the other hand, when I reported certain posts directed as hate reels at me, no action was taken," she said.

Karnataka develops manual to establish child-centric village communities in State

Rashmi Patil
BENGALURU

In a significant development, Karnataka has developed a manual to train officials and community stakeholders in creating child-friendly villages across the State.

A senior official from the Abdul Nazir Sab State Institute of Rural Development and Panchayat Raj, who was involved in preparing the manual, said, "In 2025, Halanayakanahalli in Bengaluru Urban district was recognised and rewarded by the Ministry of Panchayati Raj in the Child-Friendly Village category. The village won a National Panchayat Award

Healthy childhood: Health check-ups must be done regularly to ensure that no child is malnourished, says the manual. FILE PHOTO

along with a cash prize of ₹75 lakh."

"We studied the Halanayakanahalli case and several other villages across India while developing this manual," the official said. The manual has systematic guidelines

framed for gram panchayat officials, school teachers, police officials, and individuals who work directly and indirectly towards protecting child rights.

Explaining the contents of the manual, the official said, "There should be

100% enrolment and attendance of children in schools and anganwadis. No child should be left out of school or become a child labourer in agricultural fields or elsewhere. Apart from this, 100% immunisation of children is mandatory. Health check-ups must be conducted regularly to ensure that no child is malnourished. More importantly, there should be no child marriages or teenage pregnancies. To achieve this, awareness programmes will be conducted for children, parents and teachers." The official added that villages must have well-maintained libraries to help children develop reading habits.

Proof of life
Bureaucratic paperwork must not result in exclusion

The Registration of Births and Deaths (Amendment) Bill 2026 passed in the Lok Sabha amends Section 13(3) of the 1969 Act. In the updated framework, registrations delayed for up to two years still require a district, a subdivisional or an authorised executive magistrate's order, but when the delay exceeds two years, a judicial magistrate is required to verify the event and pass an order. The 2023 amendment rendered birth certificates the principal, in fact near-conclusive, proof of date and place of birth for school admission, voter rolls and applications for passport, Aadhaar, driving licence and government jobs. It also allowed the Centre and States to create digital databases, and required them to share data with the Registrar General. As the certificate's gatekeeping power grew, so did the incentive to obtain one fraudulently, leading to the 2026 amendment. However, the Bill's passage lacked debate in the Lok Sabha as the Opposition was protesting the July 20 police crackdown on the CJP protests. Since identity documents have also become more politically sensitive, moving potentially more contentious cases into courts insulates the administration from accusations that it is arbitrarily granting or refusing documentation. But while judicial scrutiny places the decision at arm's length from the executive, erroneous decisions could prove more difficult for disadvantaged applicants to rectify. The amendment also leaves the evidentiary rules unchanged. If the government believed executive magistrates were approving suspicious applications because the evidentiary standards were too lax, it could have prescribed more rigorous documentation, but it has not. Further, how the risk of fraudulent registrations rises after two years is unclear; the government has also not published evidence justifying a judicial magistrate's intervention at two years or whether it considered less burdensome alternatives. For now, it appears to be a compromise based possibly on shorter delays being common enough for administrative responses to resolve. Registrations are also not infrequently delayed for valid reasons, for example because they transpired in remote areas, or undocumented migrants realised a need for educational certificates. But when identity documents become indispensable to access state support, the government's policy instinct has been to raise the documents' level of assurance rather than render them more accessible. In the same vein, the amendment may further a broader philosophy that, in pursuit of bureaucratic certainty, treats the wrongful exclusion of legitimate citizens as an acceptable price to minimise the risk of wrongful inclusion. And the Rajya Sabha must debate the Bill to clarify whether this trade-off is backed by sufficient evidence.

FIFA foul
Football's governing body must embrace fairness, not chase profit

The collapse of FIFA's controversial plan that would have helped private investors benefit from the World Cup and other flagship competitions represents the latest hit to the global body's reputation. In the aftermath of the 2026 World Cup, FIFA president Gianni Infantino hurriedly put together strategies to form the FIFA Forward Enterprise (FFE) to consolidate all revenue-generating operations, and invite private bodies to hold non-controlling stakes in the body. But this elicited enormous backlash from a number of FIFA's 211 member associations, with European governing body UEFA even declaring that its 55 members would boycott the World Cup. Europe is football's nerve-centre, and with the Asian Football Confederation and players' union FIFPRO also expressing apprehensions, and one of Mr. Infantino's senior advisers quitting in protest, the scheme was a non-starter. The episode has also reduced Mr. Infantino's standing, especially after the controversy-ridden World Cup, where political interference by the U.S. – one of the co-hosts – and rampant commercialisation severely diminished 'the beautiful game'. The now-shelved FFE was to be backed by a venture capitalist with familial ties to U.S. President Donald Trump, making the whole deal all the more suspect. The 2027 FIFA election, where Mr. Infantino was expected to be re-elected for a third full term, is no longer a cake-walk. The saga has brought back into focus the conflict at the heart of FIFA's functioning and the patronage politics it enables. FIFA is the global regulator of the sport, and ideally, its commercial wing should be kept at an arm's length. However, the organisation's structure is such that the revenue generated is often used as leverage to extract favour. As a non-profit, FIFA is duty-bound to redistribute income amongst its members, but presidents – past and present – have turned it into a vote-catching tool to hold on to power. To approve the FFE project, FIFA had reportedly offered each of its members \$20 million upfront, and a direct beneficiary of this would have been Mr. Infantino at next year's election, for every association has one vote. However, history shows that moves to use legacy tournaments for self-aggrandisement are bound to fail. In 2018, the International Tennis Federation entered into a 25-year, \$3 billion partnership with a private investment firm to re-jig the over-a-century-old Davis Cup, with the promise of extra money for the game's global development. That agreement lasted just five years, with the shift from the traditional home-and-away format deeply unpopular and considered soul-shattering to the sport. It is time FIFA re-inculcates fairness, embraces consensus and shuns its president's unilateralism.

AI and cyber, the double helix of today's security threats

The rapid proliferation of digital technologies is reshaping the global security landscape. What was once an interconnected, but relatively limited, digital world, has altered into a complex interconnected ecosystem where dangers and threats lurk at every step. The combination of Artificial Intelligence (AI) and cyber threats has emerged as one of the most critical concerns of the modern world.

While AI has changed from being merely an operational efficiency mechanism into an absolute infrastructure mandate, cyber threats are becoming more sophisticated, harder to detect and more difficult to mitigate. Today, AI-powered malware can adapt and evolve in response to changes in its environment, making it harder for traditional anti-virus software to detect. The global interconnectedness of digital systems has also raised the ante as far as cyber attacks are concerned. Malicious autonomous agents are today well positioned to undermine the legacy of "Zero Trust" protocols, aggravating insider threat vectors.

Meanwhile, as seen in the war in Ukraine, newer technologies are demonstrating the potential to undermine conventional military calculus through asymmetric impact. The rapid proliferation of digital technologies and systems across every discipline, cyber breaches and malicious activities are impacting every level of security. Many governments facing sophisticated cyber adversaries are drawing up a security architecture which involves a blend of innovation, policy coherence and strategic realism, but still lag behind.

A new disruptive era

AI, meanwhile, is reshaping every consequential domain of human activity. AI's Large Language Models (LLM) are intruding into many business enterprises, without either proper training or evolution of the human interface. As 'Agentic' AI – as distinct from Generative AI – becomes a force to reckon with, problems attached to AI implementation are set to become even more complex. The catalyst for such concerns is the arrival of the latest AI systems, notably Mythos, developed by United States firm Anthropic. According to experts it demonstrates an uncanny ability to detect 'Zero day' vulnerabilities across major operating systems. What is evident is that AI is beginning to test the limits of legacy systems.

AI's overarching influence makes it essential to understand the risks and threats it poses, especially when combined with cyber capabilities, where the danger grows exponentially. AI has already transformed modern warfare, as seen in the Russia-Ukraine conflict and the U.S./Israel-Iran war. AI-powered smart systems can detect, track, and predict

M.K. Narayanan

Former Director, Intelligence Bureau, a former National Security Adviser, and a former Governor of West Bengal

Artificial intelligence and cyber threats pose unprecedented challenges to global security and economic stability

missile trajectories with remarkable accuracy. AI can also provide different kinds of intelligence from photos, text, radio, and electromagnetic signals to deny adversaries a tactical advantage. Munitions, such as systems dubbed "Goalkeeper" and "Whiplash" can independently identify and strike targets. Yet, nations, particularly the U.S., have not yet demonstrated a level of sagacity on how best to wield this power and in a manner that does not endanger human civilisation.

These developments are fuelling concerns about AI's future as increasingly capable models and robots replace human roles. LLMs and autonomous agents are already performing complex tasks once reserved for people. The World Economic Forum warns that while AI will strengthen cyber defences, it will also enable more sophisticated automated attacks, potentially rendering current "Zero Trust" protocols ineffective. This raises concerns that hard power may increasingly be shaped by nations and organisations at the forefront of AI.

Companies in the West such as Anthropic and Palantir are behaving as if they own the world of tomorrow, since they hold the key to the world's mightiest technology. Anthropic has reached a stage today where with Mythos, it creates the spectre of all-encompassing power residing in a single instrument that is not subject to any rules. China, perhaps, has its own version of Anthropic or something resembling it, but this is of little comfort to the rest of the world. What is becoming clearly evident is that an attacker with the latest version poses a grave threat to not merely one country but an entire civilisation.

An AI 'power shift'

As AI technologies become more rampant and uncontrollable, existing rules concerning cyber security may require to be completely rewritten. Many experts warn that as "Agentic Autonomous Operations" become even more sophisticated, the world could reach an inflection point that has grave forebodings for the world. Whether Mythos is the harbinger of this is yet to be determined, but it is generally acknowledged that the newer generations of AI machines provide opportunities for 'rogue groups' to demonstrate capabilities that were once associated with only nation states. As Agentic AI begins to displace Generative AI, enabling it to act more autonomously, threat levels are certain to go up still further. AI has, hence, the potential to become the dominant source of military and economic power, even as the rules to govern AI are still in a fledgling state. The bugle call has already been sounded by the pontiff of Anthropic, the AI firm that makes models such as Mythos, that it has the potential to become the dominant source of military and economic power as civilisation advances.

Notwithstanding the god-like properties of

existing modern AI models, experts warn that they are often subject to "hallucinations", thus giving scope for distortions, producing misleading reactions. Judgments in such cases tend, quite often, to be subjective. Even otherwise, biases are known to creep into decisions dictated by AI, enhancing the danger posed by unrestricted reliance on AI. Furthermore, experts warn that it is vitally important to guard against such 'algorithmic radicalisation', and ensure that AI platforms do not push opinion makers towards extreme views.

A future that needs oversight, wisdom

The world, thus, appears to have reached a tipping point in AI progress and development. Already, some companies that are leading the AI charge are accusing others of stealing their technologies and expanding on them to their advantage. The latest is a charge made by the U.S. against China, viz., that China's 'Moonshot' AI stole from Anthropic's most sophisticated AI Large Language Model 'Fable', to help create its latest AI version. Predictably, China has rejected this charge, but it reflects the intensity of the competition between the U.S. and China in this area. If Anthropic's claim is true – that its latest model has surpassed "all but the most skilled humans" in finding and exploiting security vulnerabilities in everything from popular operating systems to cryptographic software – the world could face a new kind of apocalypse.

The world has steadily progressed from abiding concerns of stagnant economic growth to doomsday technologies, and this merits a great deal of introspection. Altruism is not enough to decide on how to handle a technology that is about to eat up the world. There are several aspects of advanced AI that clearly demand more introspection, but this is not evident. As AI increasingly enters into the arena of defence sensing and warning, there is a need not only to keep machines under human control but also to ensure that AI-dictated warnings do not outrun proper understanding and reality.

Those steeped in defence aspects already know the gap that exists between warning and understanding of what might happen, and how critical this is in strategic terms. High-powered AI systems may often prove unreliable as they may demonstrate a bias towards national security given that algorithms often display such biases. The world, hence, needs to reach an understanding on how best to deal with this new technology which can, and could, end or make the future of the world. What we have seen in Ukraine and West Asia is not even the tip of this iceberg. Better to "cross the river by feeling the stones" is a better maxim than 'blind prejudice or unadulterated endorsement of a new technology'.

Critical minerals, the foundation of strategic power

Critical minerals have moved from the margins of resource policy to the centre of industrial strategy and security. Lithium, cobalt, nickel, graphite, copper and rare earth elements are foundational to electric vehicles, storage, renewable power, semiconductors, defence and advanced manufacturing. As decarbonisation and digitalisation accelerate, mineral security is becoming as important as oil once was. The global supply picture is concentrated. For copper, lithium, nickel, cobalt, graphite and rare earth elements, the average market share of the top three refining countries rose to 86% in 2024, from around 82% in 2020. Incremental supply is tied to a few nodes: Indonesia for nickel, and China for cobalt, graphite and rare earths. China is the leading refiner in 19 out of 20 strategic minerals with an average market share of about 70%, making minerals geopolitical, not merely commercial.

Geopolitical risk as a factor

Clean energy transitions will require minerals far beyond today's production systems. The current copper project pipeline points to a potential 30% supply shortfall by 2035. Lithium appears better supplied in the near term but rising demand is expected to drive the market into deficit by the 2030s. Rare earth demand will rise sharply as wind power, electronics and magnets expand.

Geopolitical risk is compounding these pressures. China's rare earth export controls announced in 2025 created concerns across energy, automotive, defence, aerospace, Artificial Intelligence (AI) and semiconductors. Major economies are responding quickly. The European Union (EU) Critical Raw Materials Act sets 2030 benchmarks of 10% domestic extraction, 40% processing and 25% recycling, and no more than 65% from a single country. The United States is diversifying supply chains through partnerships.

India's clean energy and manufacturing ambitions are mineral intensive. Under a net zero scenario, cumulative demand for critical energy

Vinayak Vipul

Partner, Business Consulting, EY-Parthenon India

Critical mineral security will define India's industrial and strategic trajectory

transition minerals could reach roughly 169 million tonnes by 2070, about 51% higher than under a current policy pathway. Copper demand will rise with power systems; rare earth demand will grow with wind energy and advanced manufacturing.

India has domestic potential, including reserves of cobalt (44.9 million tonnes), copper (163.9 million tonnes), graphite (211.6 million tonnes) and nickel (189 million tonnes), along with monazite deposits containing rare earth oxides. Recycling could eventually meet up to a quarter of copper and graphite demand by mid-century. Yet, reserves have not ensured supply security. India remains import dependent for lithium, cobalt and nickel, while graphite and China-dominated processing expose it to disruption as demand scales. The critical gap is processing and refining. India's position differs from the EU, the U.S. and Australia, which are building integrated supply chains through mandates, partnerships and processing investments. India is still developing foundational capability. While several minerals are processed domestically, capacity and high-purity production remain constrained. It has bulk-mineral experience but still relies on imports for high-purity critical mineral products.

This is where much value and vulnerability sit. In 2024, China accounted for over 90% of rare earths and graphite processing, nearly 75% of cobalt and 70% of lithium chemicals. India must build midstream capacity to participate meaningfully in supply chain realignment.

Structural constraints

Several constraints slow progress. Exploration remains relatively shallow, regulatory clearances can be time-consuming, private participation is limited and remote-region project economics are challenging. Processing is a larger bottleneck: India lacks some high-purity input facilities, while copper and graphite face smelting, purification and scale constraints. Recycling will play a role

but cannot substitute for primary supply in the near term because feedstock, collection and technology remain limited.

India's policy response since 2023 marks a shift. The government has identified 30 critical minerals, strengthened regulatory frameworks, and launched the National Critical Mineral Mission to support the value chain. The mission targets 1,200 domestic exploration projects by 2030-31, production of at least 15 critical minerals, and acquisition of 50 overseas mining assets by Indian companies. The Khanij Bidesh India Limited (KABIL) has secured 15,703 hectares in Argentina's Catamarca province for lithium exploration, while the 2026-27 Budget proposed rare earth corridors in Odisha, Kerala, Andhra Pradesh, and Tamil Nadu. The India-U.S. critical minerals and rare earths framework signed in May 2026 provides an additional diplomatic lever.

Mission to execution

The next phase is execution. Processing and refining must become a national industrial priority, backed by infrastructure and targeted incentives. Private capital needs better geological data, predictable approvals and risk sharing. India should also operationalise strategic stockpiles for critical minerals, accelerate applied research and development through industry partnerships, scale domestic capabilities and diversify overseas supply through trusted partners and platforms.

India energy transition, electronics, semiconductor, defence manufacturing, and advanced industrialisation all depend on secure mineral supplies. While individual policy measures are necessary, they are insufficient. A comprehensive strategy should establish mineral-specific risk thresholds, integrate recycling into supply planning, set measurable milestones, and create a coordinated institutional framework. The priority now is to convert potential into capability and reduce strategic vulnerability through sustained execution.

LETTERS TO THE EDITOR

PM CARES Fund

It is disturbing that the PM CARES Fund has reportedly not made public its audited financial statements for the past three financial years, even as activists continue to raise concerns about its transparency. More surprising is that the fund has been kept outside the ambit of the RTI Act, parliamentary scrutiny, and

audit by the Comptroller and Auditor General (CAG). Anything associated with the Prime Minister, except matters affecting national security, should ordinarily be open to public scrutiny. When the government closely scrutinises non-governmental organisations and other charitable organisations receiving foreign

contributions, and even cancels their licences for accounting irregularities, should not this fund also be subject to similar standards of accountability?

Tharcious S. Fernando, Chennai

India at Glasgow

India's story at the 2026 Glasgow Commonwealth Games, with 39 medals, is

about far more than a fourth-place finish. Despite fewer opportunities, our athletes chose courage over excuses. Every medal reflects years of sacrifice,

silent tears, and relentless determination. Today, we salute not only the medalists but also every athlete who gave their all. Champions are

defined as much by their spirit as by their podium finishes. The journey continues, and India hopes for even greater performances ahead.

The undermining of institutional opposition

Now that the Gen Z revolutionaries have exited Jantar Mantar, the analysts and strategists at the Prime Minister’s Office must be taking stock. For starters, Prime Minister Narendra Modi’s team got at least one decision right – the decision to get former Union Minister Dharmendra Pradhan to resign just in time. Any further delay would most likely have become a point of no return for the National Democratic Alliance (NDA) government. Demonstrations were occurring at the district level and a critical momentum was building across the nation with Bihar, the ground zero of unemployment, fast turning violent.

But apart from Mr. Pradhan’s timely resignation, all the other interventions of the Government of India as a response to the Cockroach Janta Party’s (CJP) movement was a mix between the ridiculous and the laughable. It is clear as daylight that the Prime Minister’s team singularly failed to grasp who and what they were actually dealing with.

Brewing anger

The starting assumption of the government was that it was confronting a rag-tag collection of middle-class youth whose sense of politics was immature and lacking in stamina for any mass movement to emerge. The overwhelming official common sense was to let the CJP movement simply fizzle out in the monsoon heat and humidity. Part of the misreading involved keeping the CJP leaders waiting at Union Health Minister J.P. Nadda’s residence for over two hours, while the government simultaneously set up plans to cut a deal with Sonam Wangchuk alongside operationalising a brutal lathi charge on the Gen Z campaigners on July 20.

To the government’s evident surprise, however, by July 20 evening, there was a massive turnaround in both the quality and quantity of the resistance. Not

Rajesh Mahapatra

Independent journalist and former editor of the Press Trust of India

Rohan D’Souza

Professor at Graduate School of Asian and African Area Studies, Kyoto University, Japan

The extreme centralisation of power has been steadily undermining the resilience within Indian political institutions

only did the CJP survive the brutal lathi charge and tear gas shelling, the campaign now took on the flavour of an all-India level ‘revolt’ of the people at large. An anti-Modi mood had become plainly discernible, with Instagram fired up with creative messaging and demonstrations by the Bharatiya Janata Party (BJP)’s own taken-for-granted upper class and upper caste social base.

However, even at such a high-pressure moment, the best the Prime Minister’s team could manage was a late night badly sketched Instagram video by Mr. Modi himself. Poorly executed and full of misplaced messaging, it, unsurprisingly, only added fuel to the fire. And after the Prime Minister released another hapless reel the following day, the Government of India finally threw in the towel with Mr. Pradhan’s resignation.

There is no doubt that the CJP is every bit a rag-tag outfit that is organisationally inchoate. But what it nonetheless managed to effectively achieve was to quickly tap into and electrify a vast reservoir of resentment, anger, grievance and unhappiness amongst India’s economically much beleaguered middle class and aspirational poorer classes. By doing so, it managed to reveal the considerable fragility within the Indian political landscape. The extreme centralisation of power has, over the years, been steadily undermining the resilience within Indian political institutions. Consequently, the CJP by pitching its campaign as a resistance rather than within the rules of institutional Opposition politics was able to rattle the highest level of political authority.

Undermining democracy

At the heart of this crisis lies the Modi-Shah political playbook. For years, democratic politics with institutional safeguards have been systematically undermined in India. There is, in fact, the standard fix now for eliminating any opposition. The Modi-Shah

political playbook has mainstreamed the use of the Enforcement Directorate and the Central Bureau of Investigation; the wanton buying and selling of MPs and MLAs; and have been making courts pliable at the highest level. Additionally, the questionable manner in which the highly controversial Special Intensive Revision (SIR) is being implemented can also be added to this list. There is great fear that the election process will increasingly become a selection exercise for the government in power.

In such conditions, a single trigger event, such as the CJP movement, could spark an immediate existential threat to an existing political order. However, while credit should be given to the CJP for showing resolve, and for the ability to organise and direct a grievance peacefully, their strategy is located entirely outside the political terrain of institutional politics. Thus, although Mr. Pradhan’s resignation may appear to be a signature victory for them, it more ominously reveals the turbulence and fragility within India’s political institutions. There could be less control over the street in the days to come, unless the Modi-Shah playbook ends.

The CJP has revealed that India is perilously close to losing its ability to manage a peaceful democratic transition. Though Rahul Gandhi, the Congress party, and several other Opposition parties did manage to register a strong presence throughout the Jantar Mantar movement, their hold was still less than enough and far too tenuous.

Mr. Pradhan’s resignation should perhaps be more correctly seen as the first tremor within a Republic that is buckling from its weakening democratic foundations. If anything, the most important lesson to be taken from the CJP campaign is that the constant undermining of any legitimate opposition space by the Modi-Shah play book can, unless checked, result in social instability and political chaos.

The dilemma over PM SHRI in Kerala

The UDF is caught between the need for central funds and maintaining its integrity

STATE OF PLAY

Roshni R.K.

The much discussed PM SHRI (PM Schools for Rising India) scheme has the recently elected Congress-led United Democratic Front (UDF) government in Kerala in hot soup.

Events over the past few days seem to indicate that similar to the Pinarayi Vijayan-led Left Democratic Front (LDF) government that burnt its fingers after signing an MoU for implementing the centrally sponsored PM SHRI scheme in October last year, the UDF government too could be in for possible backlash if it decides to go ahead with it. It is deja vu all over again. The same issue. The same actors. Only the roles have reversed.

The UDF government led by Chief Minister V.D. Satheesan argued that it was forced to continue with the PM SHRI as the previous LDF government had already entered into an agreement with the Union government. The State badly needs the ₹1,158.13 crore in education funds being held up by the Centre. The volte-face could not have been more glaring, since Mr. Satheesan had earlier said that Mr. Vijayan, by inking the deal, had betrayed the national cause against the National Education Policy (NEP), 2020.

Wavering stance

A little over a month after forming the UDF government, Mr. Satheesan said that only the Union government had the right to withdraw from the MoU. Kerala became a party to it the moment the agreement was signed, an argument that the current Opposition vehemently denies.

In yet another U-turn, the

Chief Minister later denied that the government had said that it would implement the PM SHRI; UDF convener Adoor Prakash had said that the government would go ahead with the scheme, even as the report of a UDF Cabinet sub-committee on the PM SHRI was awaited. It prompted the Indian Union Muslim League (IUML) leader P.K. Kunhalikutty to assert that a final decision would be taken only after the sub-committee gave its report, exposing the fault lines within the UDF. Other Muslim organisations, such as the Samastha Kerala Jamiyathul Ulama, have also been vocal about their opposition.

These repeated flip-flops made it evident that the government was in a bind over how to balance fiscal prudence, coalition pressures, and its ideological position on the NEP.

Pros and cons

The Union Minister of State for Education Jayant Chaudhary once replied in the Rajya Sabha, “States that do not sign the MoU or withdraw from the scheme stand to miss out on these benefits of PM SHRI scheme”. It has to be remembered that Punjab had opted out of the scheme in 2023, but later went back on its decision after the Union government had frozen the funds.

On the other hand, there are concerns about the curriculum. The PM SHRI Schools

framework states that the curriculum should follow the National Curriculum Framework/State Curriculum Framework developed in accordance with new curricular structure of the NEP. The MoU, for its part, says that States should implement all the provisions of the NEP in its entirety. According to the NEP, States can prepare their own curricula and textbooks, incorporating the State’s demands as needed. However, it goes on to say, “while doing so, it must be borne in mind that the NCERT curriculum would be taken as the nationally acceptable criterion.” Last year, the former Minister for General Education V. Sivanikutty had pointed out that the Union government had declared in 2022 that the objective of the Samagra Shiksha scheme was to help implement the NEP.

Even if the Union government does not appear to be intervening in the curriculum of the States at present, there is apprehension that other interventions such as curriculum-based programme implementation or prescription of teaching-learning materials/assessment patterns could well be thrust upon them.

Other than taking the legal route like Tamil Nadu did, the UDF has the option of writing to the Union government insisting on the freedom to decide its own curriculum. This undoubtedly will expose it to harsh criticism of allowing the NEP to be smuggled into the State. However, if it chooses not to implement the PM SHRI, it will lose out on crucial federal funding.

Damned if they do and damned if they don’t – that is the UDF’s dilemma on the PM SHRI scheme.

The problem with India’s free trade agreement strategy

India’s trade with key FTA partners such as the ASEAN countries has become increasingly import-driven, resulting in widening trade deficits

DATA POINT

Surendar Singh

Over the past few years, India has shown great interest in trade diplomacy to promote its economic and strategic interests. India’s new founded enthusiasm in external engagement has culminated in Free Trade Agreements (FTAs) with the UAE, Australia, Oman, the U.K., the European Union, and most recently, New Zealand. Its imperative to enhance market access continues to extend the reach of its trade architecture through ongoing trade talks with the U.S., Gulf countries and Canada, highlighting a decisive shift towards bilateralism as a vehicle of market access, value chain integration and economic dynamism. There is an emerging view among policymakers, trade diplomats, and geopolitical analysts that FTAs are indispensable instruments of economic statecraft. However, the enthusiasm on enhanced market access through trade agreements and Global Value Chain (GVC) integration is founded on a set of implicit assumptions and dominant narratives that continue to maintain a striking analytical silence. The argument that FTAs stimulate export growth and GVC integration warrants a far more nuanced view.

Widening trade deficit

India’s FTA experience with Asian economies has not been favourable. India’s trade with key FTA partners such as the Association of Southeast Asian Nations (ASEAN), South Korea, Japan and Singapore has become increasingly import-driven, resulting in widening trade deficits. Data shows that India’s trade deficit with ASEAN increased sharply from \$10.4 billion in 2012 to \$51.2 billion in 2025, driven by rapidly rising imports. In the same manner, imports increased at a much faster pace than exports in the case of Japan and South Korea.

India’s trade surplus has turned into a trade deficit in the case of Singapore after signing the trade agreement, exhibiting weakening export competitiveness.

India’s export performance across its major Asian FTA partners such as ASEAN, Japan, South Korea and Singapore reveals an intriguing picture – its underperformance. India’s share of the import basket among FTA partners has either stagnated or gradually eroded between 2012 to 2025, indicating a weakening in its export competitiveness post-FTAs. The most striking decline is in the case of ASEAN countries where India’s share of ASEAN’s import basket dropped from 3.42% to 1.71% while in the case of Singapore, the import share declined from 2.27% to 1.71%. Similarly, India’s share in South Korea’s import basket has declined from 1.33% to 1.02% while its share in Japan’s import basket shows mixed trends.

Collectively, these trends indicate that instead of leveraging trade agreements to integrate into regional production networks, India is stuck on the margins of manufacturing-led trade integration. The inability to capitalise on tariff preferences under the FTAs demonstrates that market access based on tariff elimination alone cannot compensate for weak domestic industrial capabilities, logistical inefficiencies, and infrastructure and operational constraints. India’s trade challenge is not fundamentally about negotiating more FTAs but about strengthening domestic productive capabilities and associated impediments. Without adequate industrial transformation, FTAs risk becoming instruments that increase import penetration faster than export competitiveness, thereby widening asymmetrical trade outcomes and structural vulnerabilities.

Moreover, FTAs are often presented as GVC drivers, eliminating barriers to the development of shared production arrangements and industrial upgrading. It is in-

teresting to note that India’s GVC integration related to trade as a percentage of gross trade declined from 37.13% to 34.38%, indicating that India’s integration in GVC networks has actually weakened. India’s GVC trade as a share of gross trade with its FTA partners has declined in the case of South Korea, Japan, Indonesia, Thailand, Vietnam, and Cambodia. Only in the case of Malaysia, Singapore and Philippines, has it increased.

These trends demonstrate that India’s FTAs have not translated into broad-based GVC integration. This evidence challenges the conventional assumption that FTAs automatically foster GVC integration through trade liberalisation. Moreover, it raises questions about the proposition that deeper commitments to market access and regulatory harmonisation are, in themselves, sufficient to promote GVC participation. The contemporary policy narrative surrounding India’s new FTAs and their ability to integrate into GVCs raises some critical questions.

An assessment

The declining export shares and weakening GVC integration in the case of India’s key FTA partners clearly highlight the limitations of considering FTAs primarily as instruments of market access. It is understandable that FTAs may enhance market access in certain product categories, but their abilities to foster productive capabilities is still contested. This essentially means that India’s FTA strategy needs to move beyond the standard argument of market access. It should focus on greater interaction with the broader industrial policy framework that emphasises technological upgrading, strategic investment, supply chain realignment, domestic value addition and domestic reforms. Without such policies, FTAs are likely to remain instruments of trade liberalisation that constrain policy flexibilities rather than drivers of industrial transformation.

Are the FTAs working?

The data for the charts were sourced from the International Trade Centre - Trade Map

Piyush Goyal, S. Jaishankar, European Council President Antonio Costa, and other officials at the India-EU FTA meeting in Brussels on July 15

TABLE 1: India’s trade with key FTA partners (in \$ billions)

Partner	Indicator	2012	2015	2018	2021	2024	2025
ASEAN	Export	32.3	26.35	36.25	40.68	42.71	35.96
	Import	42.74	41.47	57.51	64.84	81.87	87.19
	Trade balance	-10.44	-15.12	-21.26	-24.16	-39.16	-51.23
Japan	Export	6.4	4.5	4.8	6.1	5.8	6.1
	Import	12.4	9.6	12.6	14.4	18.9	20.9
	Trade balance	-5.95	-5.17	-7.83	-8.34	-13.06	-14.77
South Korea	Export	4.1	3.6	4.8	7.1	6	6
	Import	13.7	13.1	16.4	17.1	20.9	21.1
	Trade balance	-9.6	-9.48	-11.62	-9.97	-14.98	-15.12
Singapore	Export	13.6	7.8	10.5	10.7	15.7	10.7
	Import	7.8	7.4	14.5	18.2	20.5	23.7
	Trade balance	5.76	0.4	-3.99	-7.55	-4.87	-12.97

TABLE 2: India’s global value chain-related trade as a share of gross trade with Asian FTA partners

	2012	2020	GVC integration (Increase/Decrease)
Indonesia	41.77	30.1	-11.67
Japan	41.07	28.44	-12.63
Malaysia	49.92	50.26	0.34
South Korea	63.18	41.58	-21.6
Thailand	48.32	47.65	-0.67
Singapore	66.87	69.54	2.67
Philippines	30.47	33.9	3.43
Vietnam	56.89	54.57	-2.32
Cambodia	47.43	44.34	-3.09

The author is an Associate Professor at Jindal School of Liberal Arts and Humanities, O.P. Jindal Global University, Sonapat. Views are personal

The declining share of GVC-related trade in total trade with several major FTA partners shows that preferential market access has been inadequate to bolster India’s participation in global production networks. This evidence challenges the conventional assumption that FTAs automatically foster GVC integration through trade liberalisation

FIFTY YEARS AGO AUGUST 4, 1976

Goat breeding: new strategy

New Delhi, August 3: An ambitious scheme has been taken up to step up the production of Pashmina and Mohair, used in the manufacture of warm luxury fabrics which have a good export market.

The scheme is part of an all-India co-ordinated research project on goat breeding being implemented by the Indian Council of Agricultural Research (ICAR).

A multi-pronged strategy to improve Pashmina production includes selective breeding of indigenous goats and cross breeding with imported Soviet breeds. Efforts would also be made to rear them in the high altitude Himalayan regions of U.P. where these goats can thrive.

There are at present two research centres for improving Pashmina production located at Leh in Ladakh and Mukteswar in U.P.

According to the chief co-ordinator of the project, Dr. R. M. Acharya, there are at present only 40,000 Pashmina goats of Chan Thangi breed in Ladakh region and some small number in Himachal Pradesh.

These goats produce Pashmina of quality which is “as good or slightly better” than any produced in other countries.

A HUNDRED YEARS AGO AUGUST 4, 1926

Schoolboys’ empire tour

Rugby, August 4: A party of forty public and secondary schoolboys left London to-day for Australia. They travel under the auspices of School Empire Tour Committee and will spend the remainder of the year touring Australia. Before the train left a letter was read from the Prince of Wales, which said, “Such tours are admirable from an education view point. My own experience tells me how much there is to learn from seeing other parts of the world and there is no adequate substitute for the real knowledge to be gained in this way. More especially do I welcome the idea of tours for schoolboys to Dominions from Imperial view point. Boys will, on this occasion, be in the position of representatives. I am confident they will see to it that those who meet them in Australia will judge well of them and through them of the country of schools which they represent.”

Why has PoK erupted in protests?

How did demands over prices evolve into a movement for greater political representation in PoK? How has Islamabad responded to the protests? What has India said about the unrest? How have international rights groups and overseas Kashmiris reacted to the crackdown?

EXPLAINER

Kallol Bhattacharjee

The story so far:

Simmering discontent over inflation, lack of accountability and opaque governance in Pakistan-occupied Kashmir (PoK) has escalated into a violent crackdown by Pakistani security forces over the past week, leaving dozens dead and many more injured. Security forces have reportedly used assault weapons and sniper fire against protesters gathered in the main squares of cities such as Rawalakot and Muzaffarabad to oppose the three-phase election currently under way in PoK. The Jammu Kashmir Joint Awami Action Committee (JKJAAC), which has been leading the protests, claims that more than 50 people have been killed over the past week as demonstrations continue against what it alleges is a rigged election process.

Why are protests taking place in PoK?

PoK is caught between an establishment-backed election and a popular political movement opposing the political basis of that election. The JKJAAC has been protesting peacefully in Rawalakot, Muzaffarabad, and other locations in the region seeking to build a more representative political system in PoK. The three-phase elections started on July 27 and will conclude on August 11. The movement, which emerged after the COVID-19 pandemic to curb the prices of essential items, has evolved over the years into a protest against the lack of political representation for the local population in the PoK legislature. The legislature of PoK has a total of 53 seats, out of which 45 are elected, and eight are nominated. But because of historical reasons, 12 seats out of the 45 are reserved for refugees of Indian Jammu and Kashmir who migrated after 1947. In elections for these 12 seats, refugee voters located outside PoK cast their ballots. Locals claim that the reserved seats

Supporters of the banned Joint Awami Action Committee, an alliance of civil society groups, start a fire to block a road during a protest in Muzaffarabad. REUTERS

reduce representation of communities from the region and allow Islamabad to override local concerns.

As the authorities proceeded with the election process without addressing the demand for removing the reserved seats, the JKJAAC called for a "long march". Though the authorities have responded with a harsh crackdown, the protesters have shown that they are not going away anytime soon as they have managed to sustain the protests for months. The protest received new momentum after a PhD scholar, Osama Jaleel, of Quaid-e-Azam University in Islamabad, was reportedly killed in police firing in Rawalakot. Before his death, Osama Jaleel had been noted on the Internet for his fiery speeches in the protest meetings in Rawalakot. The JKJAAC claims that a total of 86 persons have died in the security crackdown till July 31.

How is the political relation between Islamabad and PoK?

The federal government of Pakistan has had a complicated relationship with the region for years, as mainstream political parties such as the Pakistan Peoples Party and Pakistan Muslim League-Nawaz have not been able to fulfil the developmental aspirations of the people of PoK. In recent days, however, the situation has worsened following comments by leading

figures within the establishment about the protesters. Pakistan Defence Minister Khwaja Asif incensed public sentiments by referring to the protesters as "enemies just like Indians". The main complaint is that the mainstream political parties in Islamabad have not met the region's developmental needs. Locals allege that they have been neglected by Islamabad, echoing many of the same complaints long voiced by residents of Khyber Pakhtunkhwa and Balochistan, where protests and insurgencies have continued for decades. The second phase of polling on August 2 drew allegations of irregularities and rigging.

What has India said about the Rawalakot protests?

Over the past few months, the Ministry of External Affairs has repeatedly condemned the use of harsh methods against protesters in Rawalakot and in other parts of PoK. On July 31, the Ministry of External Affairs blamed the 'Pakistani Establishment' and said: "This crackdown has resulted in the tragic death of over 40 civilians and serious injuries to many. Its absolute disdain for the innocent people of PoK was laid bare when their Defence Minister branded the protesting civilians as enemies." Adding to this, the Special Assistant to Prime Minister on Political Affairs openly

admitted that the very 'mujahideen' that the Pak establishment trained, armed and sent to bleed India have now turned their guns inward, weaponising themselves against the state.

Mirwaiz Dr. Umar Farooq has expressed "deep concern" over the unrest across the LoC and called for dialogue. "We are deeply anguished by the continuing unrest and tragic loss of precious lives during the past month and a half," said Umar Farooq. The JKJAAC has opposed India's remarks, and in a statement on June 24, the group said it "firmly rejects any attempt by India to interpret, appropriate, or project the current situation in Azad Jammu and Kashmir in support of its own claims or geopolitical positions. The present civil rights movement is neither a proxy nor an extension of interstate rivalries. Any such characterisation is both inaccurate and misleading."

Is there a strategic dimension?

The protests have been concentrated in Rawalakot, which lies along the Line of Control, and Pakistan's response so far shows it will not tolerate instability in a region of primary importance to its security.

The strategic dimension of the disturbances can be assessed by the fact that Kotli, Muzaffarabad and Rawalakot – the areas where protests have taken place hosted terror-related targets that India had claimed to have hit in the May 2025 Operation Sindoor.

Apart from India, Amnesty International and influential leaders in the U.K. have also called for restraint from the Pakistani establishment. Responding to the existing communication blackout in PoK, Amnesty has said: "We urge the Pakistani authorities to restore all communications access and allow media and independent observers into the area." Non-resident Mirpuri Kashmiris, who have a strong community-level presence in the U.K., have started an online campaign to restrain Pakistan's security establishment from continuing with the repressive measures.

THE GIST

▼ A movement that began over rising prices has evolved into a campaign against the PoK election process, with the JKJAAC demanding the removal of 12 reserved seats that it says undermine local representation.

▼ Protests have intensified amid allegations of election rigging and a deadly security crackdown; Pakistan's response has drawn criticism from India, Amnesty International and U.K.-based Kashmiri groups.

Why has West Bengal cleared land for the BSF now?

Why is West Bengal central to India's border fencing project? What are the policy challenges?

Saeed Pande

The story so far:

The West Bengal Cabinet has approved the permanent transfer of 31,905 acres at nine locations to the Border Security Force (BSF) for border fencing and related security infrastructure, along with 1.53 acres for three new Border Outposts in Malda, Nadia and Cooch Behar. The decision removes a major State-level bottleneck in a long-delayed border infrastructure project affected by land acquisition disputes, difficult terrain, and legal and political complications. The move also follows the Calcutta High Court's order of January 2026, directing the State government to hand over acquired land in nine border districts to the BSF by March 31, 2026.

Why is Bengal central to the project?

West Bengal shares the longest international border with Bangladesh among Indian States. According to the

Ministry of Home Affairs, India's 4,096.70-km border with Bangladesh includes 2,216.7 km in West Bengal, which is approximately 54% of the entire frontier. As of August 2025, 1,647.696 km had been fenced, while 569.004 km remained to be covered by fencing or other border infrastructure. Of this, 112.780 km was classified as non-feasible for conventional fencing, while 456.224 km remained technically feasible but pending completion.

Why has the project been delayed?

The delays reflect a combination of geographical, administrative and legal constraints. Nationally, the MHA reported that 3,232.218 km of the India-Bangladesh border had been fenced by August 2025, leaving 864.482 km unfenced across West Bengal (2,216.7 km), Tripura (856 km), Meghalaya (443 km), Mizoram (318 km) and Assam (263 km).

Of the remaining unfenced stretch, 174.514 km has been categorised as non-feasible for conventional fencing

because of riverine channels, marshlands, floodplains, shifting river courses, densely inhabited settlements and the ecologically sensitive Sundarbans, where fencing is technically difficult and seasonally constrained. Other pending stretches require land acquisition, compensation, environmental clearances and completion of bilateral border management procedures.

What governs India-Bangladesh border fencing?

According to the Ministry of External Affairs, India undertakes border fencing and related security measures in accordance with bilateral agreements and operational protocols between the BSF and the Border Guard Bangladesh (BGB). The border is governed by the 1975 Joint India-Bangladesh Guidelines for Border Authorities, the Coordinated Border Management Plan (CBMP), 2011, and the 2015 Land Boundary Agreement (LBA), which implemented the 1974 Land Boundary Agreement and its 2011

Protocol, resolved enclave and adverse-possession disputes, and enabled the exchange of 162 enclaves, 111 Indian enclaves in Bangladesh and 51 Bangladeshi enclaves in India. India has also reiterated its expectation that these understandings will continue to support cooperation against cross-border crimes, including smuggling, human trafficking, illegal migration, arms trafficking and counterfeit currency networks.

What are the policy challenges?

This is a challenge of balancing national security with the livelihoods of communities living along the border. In districts such as Malda and Nadia, agriculture, informal trade and long-standing social ties extend across the frontier, meaning that fencing can improve surveillance while also affecting access to farmland, mobility and local commerce. As the largest unfinished segment of the India-Bangladesh border lies in West Bengal, progress and development in the State remain central to the completion of the national fencing programme. In many sectors, particularly riverine terrain, the future of border management is likely to depend on an integrated combination of physical barriers, Border Outposts, surveillance technology and coordinated action between the Union and State governments. (Saeed Pande is a freelance writer with a focus on current affairs, international relations and geopolitics)

THE GIST

▼ The West Bengal Cabinet has approved the transfer of over 33 acres of land to the BSF for border fencing and Border Outposts, removing a long-pending bottleneck in completing security infrastructure along the India-Bangladesh border.

▼ Although more than three-fourths of the border has been fenced, progress continues to be delayed by land acquisition disputes, difficult riverine terrain, environmental constraints and legal issues, requiring a mix of fencing, surveillance technology and coordinated Union-State action.

Why lab-grown diamonds are sustainable alternative to mined stones

Natural diamond mining is facing dwindling supplies while remaining associated with environmental damage, forced labour, conflict and pollution; lab-grown diamonds offer a more affordable, traceable and sustainable alternative, with India investing in indigenous production and research

Anupama Janakiraman
U. Vishnuja
S. Boominathasellarajan
N. Arunachalam

For centuries, diamonds have been regarded as symbols of eternal love, characterised by their rarity, scintillation and lustre. But behind the glamour of these stones lies a cold, hard truth: an industry plagued by forced labour, civil violence, and pollution. Some of the world's largest diamond mines, such as the Argyle mine in Australia and the Diavik mine in Canada, have reached a point of exhaustion in recent years. This depletion has worsened year by year, and production is now at a multi-decade low. After all, natural diamond mines are only a finite source. It is estimated that the 40 diamond mines accounting for 90% of global production spread throughout Botswana, Russia and other countries have a lifespan of no more than 50 years.

The hidden cost
However, the problems associated with natural diamonds extend beyond dwindling supplies. Diamond mining requires large amounts of water and energy and causes considerable damage to the surrounding ecosystems. It is often associated with deforestation, displacement, soil erosion and water pollution. Massive open-pit excavations can also trigger landslides and mudslides. Moreover, labourers suffer from a plethora of diseases as a result of working in diamond mines. A study by Gill Nelson et al. in 2011 found that workers are at risk of asbestos exposure and may develop asbestos-related diseases, including asbestosis, pleural plaques, and mesothelioma. Then come the blood diamonds, which are mined diamonds involved in illicit sales and used to fund military action. It is nearly impossible to deduce a diamond's

geographic origin. Although the Kimberley Process was introduced to verify that diamonds are conflict-free, regulatory gaps continue to allow blood diamonds to be smuggled across borders. As a result, these diamonds contribute to political and civil conflict. These concerns raise an important question: can the beauty and durability of diamonds be preserved without the social and environmental costs of mining? In recent years, the answer appears to be yes, through the use of lab-grown diamonds.

A sustainable alternative emerges
The first proven synthetic diamonds were made by GE (General Electric) in 1954, under a project codenamed “Project Superpressure.” They utilised the HPHT (High Pressure, High Temperature) process, which mimics the conditions under which natural diamonds form in the Earth's mantle. In 1962, another method known as CVD (Chemical Vapour Deposition) was first used. This process involves depositing diamond material onto diamond seeds through chemical reactions involving carbon-rich gases. Lab-grown diamonds are chemically, physically and optically identical to their natural counterparts. Until 2018, they were sold at a modest discount to mined diamonds. Due to improvements in the efficiency of laboratory equipment, the price of lab-grown diamonds has continued to decline over the years. Now more affordable and traceable, lab-grown diamonds preserve the qualities that have made diamonds desirable since time immemorial while avoiding much of the damage linked to conventional production.

India's push for lab-grown diamonds
India has also begun to recognise the potential of lab-grown diamonds as a sustainable and economically viable

Table 1: presents a comparison of natural and lab-grown diamonds, drawing on findings from the Natural Diamond Council's 2025 report and a 2021 study by Vladislav Zhdanov et al

Criterion	Natural diamonds	Lab-grown diamonds
Cost per carat in India	₹1.5–7 lakhs	₹80,000
Water consumption	0.077 m³/ct	0–0.002 m³/ct
Energy consumption	150 kWh/ct (DeBeers)	36 kWh/ct (HPHT) 214.7 kWh/ct (MP-CVD)
CO2 emissions	160 kg/ct	17–260 kg/ct

Diamond prices vary based on the 4Cs — carat, cut, colour and clarity. The values shown are representative market ranges.

alternative to mined stones. In the Union Budget 2023-24, the Government of India announced measures to encourage indigenous production of lab-grown diamonds, including support for research into HPHT and CVD technologies. As part of this initiative, in 2023, the Indian Institute of Technology Madras (IIT Madras) was awarded a five-year grant of approximately ₹243 crore by the Ministry of Commerce and Industry to establish the India Centre for Lab-Grown Diamond (InCent-LGD). The centre aims to develop domestic expertise in diamond seeds, machinery, and manufacturing processes. To put things into perspective, **Table 1** consolidates the results of the 2025 Natural Diamond Council report and a 2021 study by Vladislav Zhdanov et al. to compare attributes of natural and lab-grown diamonds. The staggering variation in carbon emissions for lab-grown diamonds can be attributed to the energy source used for production. Diamonds created using coal-heavy power grids have higher carbon emissions, while those manufactured using renewable energy sources have a much lower carbon footprint. The latter aligns with the United

Nations Sustainable Development Goals (SDGs), which emphasise the transition to cleaner energy systems and more sustainable manufacturing practices. Furthermore, the use of renewable energy in diamond production reflects the principles of a circular economy, where resources are utilised more efficiently and environmental impacts are minimised throughout a product's life cycle. Although lab-grown diamonds are not entirely free from environmental concerns, the next generation of consumers is increasingly drawn to them as a more sustainable alternative to mined diamonds. This shift in public perception reflects a growing emphasis on ethical sourcing, environmental responsibility, and product traceability. Their advantages become even more significant when one considers the wide range of applications diamonds have in modern society. They are used in heavy-duty industrial processes, including cutting and drilling, as well as in quantum computing, protective coatings that extend equipment lifespan, semiconductor manufacturing and several other fields. For a material so deeply woven into both industry and culture, selecting the more economical and sustainable option becomes no longer a choice — it is a responsibility. (Prof. N. Arunachalam is currently working as a Professor, Department of Mechanical Engineering and also leading the HPHT technologies development activities for growing diamond in lab as part of India Centre for Lab-grown Diamond (InCent-LGD), IIT Madras. Dr. S. Boominatha Sellarajan is working as a Principal Project Scientist at InCent-LGD, IIT Madras, Dr. U. Vishnuja is working as Project Manager at InCent-LGD, IIT Madras. Miss. Anupama Janakiraman is an 11th Std. student studying at Sishya School, Adyar, Chennai).

THE DAILY QUIZ

Test yourself on India's performance at the Glasgow Commonwealth Games that concluded on Sunday

V.V. Ramanan

QUESTION 1
Of the 122 athletes who represented India, 38 returned with 39 medals, with one of them getting two (a silver and a bronze). Name this champion.

QUESTION 2
In para athletics, six medals came from three events thanks to three double podiums, of which two were top-two finishes. Name the events.

QUESTION 3
Who was the first medallist and the first to strike gold for India at the Games?

QUESTION 4
Apart from boxing, in which sport did India win two gold medals for the first-ever such success for the country at the Games?

QUESTION 5
Name the compatriots of Neeraj Chopra and Praveen Chithravel who claimed bronze when the duo won silver in their disciplines.

QUESTION 6
Which gold medallist was the flag-bearer at the Closing Ceremony of the Games?

QUESTION 7
The youngest member of India's contingent also brought the curtains down on India's campaign. Name the teenager.

Visual Question:
Name this athlete who won his event with a Games record.

PTI

Questions and Answers to the previous day's daily quiz: 1. Why did “J.C.” Owens become known as “Jesse”?
Ans: A teacher misheard or misunderstood his initials, “J.C.” (for James Cleveland), and recorded his name as “Jesse”.

2. What was the nickname given to Owens' extraordinary sequence of performances at the 1935 Big Ten Championships? **Ans: The “Greatest 45 Minutes Ever in Sport.”**

3. What was Jesse Owens' winning distance in the long jump at the 1936 Olympics? **Ans: 8.06 metres (26 ft 5 in).**

4. Which two athletes were controversially dropped from the U.S. 4×100-metre relay team before the final, allowing Jesse Owens and Ralph Metcalfe to compete? **Ans: Marty Glickman and Sam Stoller.**

Visual: Identify this U.S. President who neither congratulated Jesse Owens nor invited him to the White House after his four-gold-medal triumph at the 1936 Berlin Olympics. **Ans: Franklin D. Roosevelt.**

Know your English

S. Upendran

What is the meaning of “geek”? (T. R. Ananthamman, Chennai)
This is a word which is mostly used in informal contexts. A ‘geek’ is a person who is disliked by most people because of his disgusting behaviour or appearance. The ‘ee’ is pronounced like the ‘ee’ in ‘bee’, ‘see’, and ‘fee’. Here are a few examples.
Our new chemistry professor looks like a geek. Wonder how he got the job.
Who is the geek you were talking to?
You may be interested to know that the word ‘geek’ has another meaning as well; one that is more complimentary. A hardworking person can also be referred to as a geek. For example:
Mohan is the geek you find in the library all the time.
‘Geek’ was first used to refer to people who performed in circuses; not the acrobats, but those who performed unusual acts like biting off the head of a chicken, swallowing a live goldfish, etc.—acts which made the audience squirm. Or should I say acts which made the audience scream “EEK”!

Which of the following sentences is correct? “I pity who buy things from you” or “I pity those who buy things from you”. (V. Harini, Neyveli)
The second sentence is correct. The verb ‘pity’ needs an object after it. Who are the people that you pity? The first sentence doesn’t give us this piece of information, the second one does. You pity those people who buy things from the person you are talking to. Here are a few examples.
I pity the people who have to work in this weather.
Rama pitied Bharath because he hadn't completed his assignment.

What is the meaning and origin of the expression “wet behind the ears”? (I. Manish, Kerala)
When you say that someone is wet behind his/her ears, it means that he/she is young and immature. The person is ‘green’. Here are a few examples.
You can easily fool Anand. He is still wet behind the ears.
I don't know how Janaki got promoted. If you ask me, she is still wet behind the ears.

Before we entered this beautiful world of ours, all of us were floating around in our mother's tummy. When we came out of the womb, we came out with the amniotic fluid that was surrounding us. In other words, we entered this world soaking wet. Doctors /nurses used towels to dry us off before handing us over to our mothers. In the case of newborn animals however, the mother has to lick the baby dry. It takes quite some time for the mother to do this. And one of the last places to become dry, I understand, is the area behind the ears. So if an animal is still wet behind its ears, it implies it has come into this world recently; it is still ‘green’.

What is the meaning of Kangaroo court? (T. Ilanchelian, Kumbakonam)
This is no court at all. A kangaroo court is an unofficial court of law set up by a group of people, especially in prisons and trade union organisations, in order to try someone of a crime. In most of these cases, the verdict is predetermined. The person on trial is usually found guilty and punished.

For BJP, the result in Bankipur is more than just a poll defeat

A new cohort of Gen Z voters and discontent over centralised control of the State unit have contributed to BJP's loss in its stronghold in Bihar; abrupt replacement of the candidate without specifying a reason highlighted a sense of overconfidence

NEWS ANALYSIS

Nistula Hebbar
NEW DELHI

No Assembly bypoll has been watched with keener interest than the one that just concluded at Bankipur in Bihar in a resounding victory for Jan Suraj Party (JSP) leader Prashant Kishor.

He challenged the Bharatiya Janata Party (BJP) in a seat that is considered its stronghold since 1995 and was recently vacated by the party's national president Nitin Nabin. For the BJP, losing the Bankipur bypoll goes beyond the more typical loss of a stronghold to probing internal issues and factoring the electorate's changed demographic profile. The electoral loss comes on the heels of the Gen Z protests in the national capital.

In Bankipur, nearly a third of voters fall in the ur-

Reality check: PM Narendra Modi flanked by Union Minister Amit Shah and BJP national president Nitin Nabin in Parliament. PTI

ban Gen Z age group, the same cohort as the protesters at Jantar Mantar recently. These youngsters don't stand alone. Their parents, belonging to a different generation and possibly BJP supporters, have been affected just as much by shrinking opportunities for their children, and the police crackdown on the protests.

It did not help matters much when Mr. Nabin, the

former five-term Bankipur MLA, termed the Gen Z protesters as "virus[es] and cockroaches, a gang devoted to breaking the country".

Low voter turnout
The election saw a low turnout of around 34%, nearly seven percentage points lower than in the 2025 Assembly election. Clearly, many voters who had backed the BJP in 2025

either stayed home or voted for Mr. Kishor.

The BJP has had to wait for decades to have its own Chief Minister in Bihar. For years, despite being the party with a stronger organisation and a bigger social base, it needed the social engineering of Backward Classes from the non-Yadav Kurmi-Koeri communities that former Chief Minister and Janata Dal(U) supremo Nitish Kumar brought to the table.

In March, Mr. Kumar, said to be ailing, was finally persuaded to give way to the BJP's Samrat Choudhary as Chief Minister, and take up a seat in the Rajya Sabha. The selection of Mr. Choudhary, who joined the BJP after stints in the Rashtriya Janata Dal (RJD) and the JD(U), was not a popular move within the BJP's Bihar unit. They would have preferred a leader with a dyed-in-the-wool approach. But Mr. Choudhary too brought a

social base that the BJP wanted to keep. He was picked by the national leadership, with others expected to fall in line.

The BJP's confidence that its choice of Chief Minister had the backing of both the electorate and its local unit seems to have blinded it to the brewing discontent, especially after the death of social activist Bharat Tiwari, allegedly at the hands of Bihar Police. Mr. Kishor, in fact, kept revisiting this sore point among BJP cadre throughout his bypoll campaign.

This was followed by a change in the BJP's candidate, with the party replacing Abhishek Bunty with Neeraj Kumar Sinha for some unspecified issue. A remark attributed to a BJP leader during the campaign, later denied by the party, that anyone fielded by the BJP, even a dog or a cat, would be elected in Bankipur, highlighted the sense of hubris.

From steering campaigns to charting his own course

Amarnath Tewary
PATNA

Just a month ago, election strategist and Jan Suraj Party (JSP) founder Prashant Kishor announced that he would contest the Bankipur Assembly byelection in Patna.

"If the BJP wins the Bankipur election, I will have no hesitation in acknowledging that the people of Bihar endorse their policies, their public face, and their government. If the BJP loses, the government must accept that the people of Bihar do not approve its conduct, character, image, and system of governance," Mr. Kishor told the media while announcing his candidature.

The byelection marks Mr. Kishor's electoral debut. In the State election held in November 2025, the JSP couldn't win a single seat, though it contested in 238 out of the 243 Assembly constituencies.

Mr. Kishor was born on March 20, 1977, in Konar village in south-western Bihar's Rohtas district. He completed his schooling in

Prashant Kishor

Buxar in 1991 and then attended Patna Science College for intermediate studies. Later, he earned a Bachelor of Business Administration degree from Lucknow University, followed by advanced professional training and studies in public health and healthcare management.

He subsequently founded one of the country's largest political consultancy firms, the Indian Political Action Committee (I-PAC).

As a political strategist, Mr. Kishor worked for the BJP in Gujarat during the 2014 Lok Sabha election campaign, that saw the rise of Narendra Modi as a national leader. Following the 2014 Lok Sabha election, he and I-PAC parted ways with the BJP and worked

for Bihar's *Mahagathbandhan* – an alliance between the Janata Dal (United), the Rashtriya Janata Dal, and the Congress – in the 2015 Bihar Assembly election.

Mr. Kishor was subsequently appointed the vice-president of the JD(U). He and his firm later worked for several leading political parties, including the Congress, the Aam Aadmi Party (AAP), the Dravida Munnetra Kazhagam (DMK), the Trinamool Congress, and the Yuvajana Sramika Rythu Congress Party (YSRCP).

The JD(U) left the Mahagathbandhan twice – in 2017 and 2022 – to join hands with the BJP. Mr. Kishor exited the Nitish Kumar-led party in 2020, citing differences over its support for the Citizenship Amendment Act (CAA).

In 2022, Mr. Kishor dissociated himself from I-PAC and launched the Jan Suraj Padyatra from Valmikinagar in Bihar's West Champaran district. He launched the Jan Suraj Party on October 2, 2024.

In Datia, Congress kept a united front as BJP grappled with internal discord

Mehul Malpani
BHOPAL

Following a high-stakes byelection that witnessed a campaign involving several big faces and infighting rumours in both parties, the Congress on Monday retained Madhya Pradesh's Datia Assembly seat after defeating the ruling Bharatiya Janata Party (BJP) candidate in the July 30 byelection.

In the results, Congress candidate Ghanshyam Singh defeated the BJP's Ashutosh Tiwari by 6,016 votes, while the Aazad Samaj Party's Damodar Yadav 'Mandal' finished third with 22,527 votes.

The bypoll was necessitated after the disqualification of the Congress's Rajendra Bharti in April following his conviction in a bank fraud case. Bharti had won the seat in 2023 Assembly election after defeating former State Home Minister and BJP heavy-weight Narottam Mishra,

On cloud nine: Congress workers in Bhopal celebrate Ghanshyam Singh's win in Datia Assembly byelection on Monday. A.M.FARUQUI

ending his three-term dominance on the seat.

Morale boost
For the M.P. unit of Congress, which was low on morale since the nomination of its Rajya Sabha candidate Meenakshi Natarajan was rejected, the victory comes as a booster shot with just two years left for the 2028 State Assembly election.

The Congress managed to present a largely united front throughout the campaigning.

According to Congress insiders, Chief Minister Digvijaya Singh played a key role in candidate selection and management of the caste equation, while State unit chief Jitu Patwari led booth management and intense campaigning.

The ruling BJP, on the other hand, seems to have failed in putting its house in order following protests by Mr. Mishra's supporters after he was snubbed for party ticket. The anger of his loyalists, who form a large chunk of the BJP's lo-

cal cadre and functionaries, appears to have cost the party despite various meetings with Mr. Mishra in Bhopal and New Delhi and efforts by senior leaders to engage with his supporters and local functionaries. It lost various significant booths, including Mr. Mishra's own and that of district president Raghuvir Singh Kushwaha, who had offered to resign after the former was snubbed for the ticket.

State BJP sources point out that workers associated with Mr. Mishra did not put the energy into BJP's campaign. Rumours and allegations that Mr. Mishra "silently supported the Congress candidate" also circulated during the campaigning.

Datia constituency comes under the Gwalior-Chambal region, which has seen the influence of caste factor in electoral politics over the years due to its proximity with Uttar Pradesh.

Kishor gains across the spectrum as voters support his call for change

Amit Bhelari
PATNA

Voters in central Patna's Bankipur Assembly constituency, long considered a stronghold of the BJP, on Monday expressed happiness that Jan Suraj Party's (JSP) Prashant Kishor had won the byelection. People across communities and caste groups, including Muslims, Yadavs, upper castes, and Scheduled Castes, said they had voted for Mr. Kishor.

The BJP fielded Neeraj Kumar Sinha from the seat, which had been represented by the party's national president, Nitin Nabin, who won it for the fifth consecutive time in 2025. Mr. Nabin's father, Navin Kishore Prasad Sinha, had held the seat since 1995.

'Better alternative'
Deepak Sharma, a member of the Bhumihar community, said: "Prashant Kishor was a better candidate and a better alterna-

In jubilation: Jan Suraj Party supporters celebrate Prashant Kishor's win in the Bankipur by-election in Patna on Monday. PTI

tive. He always raised public issues with clarity and boldness. Unlike other political leaders who make lofty promises, he raised the simple slogan – vote for the future of your children. This is something really different from others."

Many upper caste voters felt the BJP had taken them for granted. "The BJP thought that even if it fields an ordinary party worker, the voters will give them their vote. The people of Bankipur have rejected

this mindset. In the entire campaign, the BJP candidate hardly spoke anything. If he cannot speak to the public, how will he speak about our cause in the Assembly?" Akhilesh Mishra, a member of the Brahmin community, said.

'RJD indifferent'
In areas such as Peermuhani and Daldali Road, where SC voters form a sizeable segment of the electorate, residents said Mr. Kishor personally visited these

areas, met members of the community, and urged them to vote for change.

The Yarpur and Jakkanpur areas, which have voters from the Other Backward Classes (OBCs), particularly Yadavs, said the Opposition Rashtriya Janata Dal (RJD) remained largely indifferent throughout the campaign.

"When the campaign was at its peak, Tejashwi Yadavji was on a foreign trip and only joined during the last two days of the campaign. We did not find much enthusiasm and eagerness in the RJD," Mangesh Yadav said.

Large numbers of Muslim voters in the Sabzibagh area also opted to vote for Mr. Kishor. "As everyone knows, our community votes for candidates who can defeat BJP. We did not find that calibre in the RJD candidate while Prashant Kishor was the one giving the BJP tough and sleepless nights," Mohamad Rizwan said.

Public anger is so strong that the BJP could not even retain its safest seat: Akhilesh

Mayank Kumar
LUCKNOW

Reacting to the Assembly byelection results, Samajwadi Party (SP) president Akhilesh Yadav on Monday said the result pointed to the beginning of change. He added that the public anger was so strong that the BJP could not even retain its safest seat.

"Those who boasted of making God dance have been made to dance by God himself. This is a combined result of the unity of the youth and the anger of their parents because of vote theft, paper theft, offerings and donations stolen, job stealing, reservation theft, atrocities on PDA, Gross corruption, the Impact of Inflation, attacking the nation's Gen Z in every way. In all these ways, BJP has betrayed the trust and faith of the people," he said in a post on X.

Taking a jibe at the BJP national president, Nitin Nabin, without naming him, he said, "Now, even the BJP will demand the resignation of one of its own, because how can the boat sail by relying on someone who lost their own Assembly election? In reality, this defeat belongs to those who elected them, or rather, imposed their will on the organisation. This is a double defeat of the double engine."

CHALLENGE COMPLETE

‘Bringing home a gold medal feels like a massive accomplishment’

PTI

Competing in the 48kg category is difficult, and managing the weight while training is a huge challenge. But this is a part of our life, and I faced it. Having faced all that and to bring home a (CWG) gold medal feels like a massive accomplishment. I'll certainly put in my best effort for Asian Games — Mirabai Chanu, weightlifter.

REWARD

Sports Minister felicitates CWG weightlifting medallists

ANI

Sports Minister Mansukh Mandaviya on Monday felicitated India's Commonwealth Games weightlifting medallists. The Indian lifters returned with eight medals — one gold, six silver and a bronze. Mandaviya presented cash awards of ₹30 lakh to gold medallists, ₹20 lakh to silver medallists and ₹10 lakh to the bronze medallist.

WHO NEXT?

Markram not fussed about the prospect of leading LSG in next IPL

FILE PHOTO: R.V. MOORTHY

Aiden Markram said he hasn't given much thought to the prospect of leading LSG in the IPL next year, leaving the decision of finding Rishabh Pant's replacement to the franchise. "There are some quality leaders in that group, so I'm not too fussed about it. Whoever gets it, I'm sure will take it on and do a good job," he said.

SEASONED CAMPAIGNER

Chelsea signs veteran midfielder Henderson on a two-year deal

AFF

Chelsea announced the signing of veteran England midfielder Jordan Henderson from Premier League rival Brentford on Monday. The former Liverpool captain, who was part of England's World Cup squad at the recent tournament in North America, has signed a two-year deal at Stamford Bridge.

Glasgow passes baton to Ahmedabad in a glitzy affair

The closing ceremony seamlessly blends the finest of Scotland's music, culture and heritage with India's rich traditions that showcase the values of unity, friendship and hospitality in a fitting finale

C'WEALTH GAMES

K. Keerthivasan
GLASGOW

As Glasgow bid farewell to the Commonwealth Games with a grand and colourful closing ceremony at the OVO Hydro here on Sunday, perhaps no words captured the spirit of the host city better than those of celebrated Scottish poet Jackie Kay.

In a moving love letter to Glasgow, with a backdrop of videos showing residents at the city's iconic landmarks, Kay posed a simple yet profound question: "What is Glasgow if not a place of welcome to the citizens of the world?"

It was a sentiment that resonated throughout the 11-day Games, during which the Scottish city earned widespread praise for its warmth, hospitality and impeccable organisation.

The ceremonial handover of the Commonwealth Games flag to Olympic and World champion Neeraj Chopra, Indian Olympic Association president P.T. Usha and the Deputy Chief Minister of

Gujarat, Harsh Sanghavi, accompanied by the voice of Scottish singer Shereen Cutkelvin, symbolically transferred the Games from Glasgow to Ahmedabad, host of the 2030 (centenary) Games.

When the Indian cultural show began, the Indian audience erupted in joy.

Titled 'The World is One Family: Vasudhaiva Kutumbakam', the opening ensemble celebrated the enduring Indian philosophy of universal brotherhood while commemorating the 150th anniversary of the National song *Vande Mataram*. Led by actress and former Miss World Manushi Chhillar, with a musical score by Shankar Mahadevan and choreography by Shiamak Davar and his troupe, the performance presented India's rich cultural heritage and its message of unity and hospitality to the world.

Shankar Mahadevan's sons Shivam and Siddharth, along with the energetic performance of renowned Gujarati and Bollywood playback singer Bhoomi Trivedi, added more vibrancy and heft to the spectacle and brought the Indian segment alive on the stage.

Earlier, singer-song writer Sandi Thom set the tone for the night with the number 'Proud to Be From Scotland', accompanied by the tribal drum band Clann An Drumma.

Australian singer Delta Goodrem then welcomed the athletes with a medley of her greatest hits as volunteers carrying the flags of the 74 participating nations and territories entered the arena. She followed it with a stirring rendition of Warrior, accompanied by archive footage celebrating memorable moments from the Games.

Goodrem later invited Scottish singer Cammy Barnes onto the stage, and the duo performed John Farnham's popular rock anthem 'You're the Voice', backed by a choir and traditional Scottish pipers, drawing one of the loudest cheers of the evening.

Gaining momentum

The celebrations gathered further momentum as Primal Scream's hit 'Loaded' came alive through a fine collaboration featuring bagpipers, community performers and Glaswegian-Nigerian rapper Bemz.

Final medals table (top-5)

Country	G	S	B	Total
Australia	70	45	56	171
England	29	45	36	110
Canada	19	20	23	62
INDIA	13	17	9	39
Scotland	13	9	17	39

The mood then turned reflective with Kay's poignant poem before the spotlight shifted to electrotrad band 'Elephant Sessions'. Their pulsating performance, accompanied by poet and musician Hamish Kiernan-Hutcherson, showcased Glasgow's contemporary spirit.

Later, Scotland's para-athlete Melanie Woods received the David Dixon Award, presented to the outstanding athlete of the Games.

Overall, it was a fitting finale to a glitzy show that seamlessly blended the finest of Scotland's music, culture and heritage with India's rich traditions that showcased the values of unity, friendship and hospitality that perhaps best define the Commonwealth spirit.

See you in 2030! The ceremonial handover of the flag to Neeraj, IOA chief Usha and Gujarat Deputy CM Sanghavi has symbolically transferred the Games from Glasgow to Ahmedabad. Boxer Jaismine leads the Indian contingent in the closing ceremony. REUTERS & PTI

Bumrah injury blow for India, Nabi gets maiden Test call-up

CRICKET

Amol Karhadkar
NEW DELHI

India's chances of keeping its faint World Test Championship (WTC) final hopes alive suffered a setback as Jasprit Bumrah was ruled out of the two-Test series against Sri Lanka after failing to make a complete recovery from a left knee injury.

The Board of Control for Cricket in India (BCCI) confirmed on Monday that the premier fast bowler has failed to obtain the required fitness clearance after sustaining the injury during the ODI series against England. Jammu and Kashmir pacer Auqib Nabi has been drafted into the squad as Bumrah's replacement, earning his maiden senior India call-up.

When the Ajit Agarkar-led selection committee announced the squad last week, both Bumrah and B. Sai Sudharsan had been included subject to fitness clearance from the BCCI's Centre of Excellence. While Bumrah has fallen short of the benchmark, Sai Sudharsan is understood to have made significant progress in his rehabilitation and is expected to be cleared before the team departs for Sri Lanka

A special one: A spot in the Test squad is the highpoint of Nabi's career. FILE PHOTO: K. MURALI KUMAR

on August 4.

Bumrah's absence is a significant blow to Shubman Gill's side ahead of a series India cannot afford to lose if it is to preserve its remote chances of qualifying for the World Test Championship final. The 32-year-old has been India's spearhead across formats, and his experience will be particularly missed in conditions where India is expected to rely on disciplined fast bowling alongside the spin attack.

For Nabi, meanwhile, the call-up marks the culmination of a remarkable rise in domestic cricket. Having collected 104 wickets across the last two Ranji Trophy seasons, including 60 in the 2025-26 cam-

paign, he played a central role in Jammu and Kashmir's maiden Ranji Trophy triumph.

The right-arm seamer also impressed on the recent India-A tour of Sri Lanka, claiming six wickets in two First Class matches, performances that strengthened his credentials before the selectors turned to him following Bumrah's withdrawal.

The updated squad:

Shubman Gill (Capt.), K.L. Rahul (Vice-capt.), Yashasvi Jaiswal, Rishabh Pant (wk), Sai Sudharsan (subject to fitness clearance), Dhruv Jurel (wk), Ravindra Jadeja, Kuldeep Yadav, Manav Suthar, Mohammed Siraj, Prasidh Krishna, Gurnoor Brar, Devdutt Padikkal, Saransh Jain, and Auqib Nabi.

Greaves, Chase fifties lift West Indies to 344

Associated Press
PORT OF SPAIN

The West Indies batters frustrated Pakistan before the home team was bowled out for 344 on the stroke of lunch on day two of the second and final Test on Tuesday.

The visiting side was 136 for two at the time of going to the press.

Earlier, Justin Greaves top-scored with 73 and captain Roston Chase made a defiant 70 as West Indies achieved a decent total on a wicket already showing plenty of assistance to the slow bowlers.

Pick of the bowlers

Off-break bowler Sajid Khan took four for 85 while left-arm spinner Ali Usman, playing in his second Test, Mohammad Ali and Ubaid Shah claimed two wickets apiece.

Resuming on 239 for

five in the first innings, Chase and Greaves extended their sixth-wicket stand to 96.

Ali then struck immediately, after captain Babar Azam had given him the second new ball, as the inform Greaves was caught at point.

Kemar Roach should have been out without scoring, but Pakistan didn't go for the television review despite replays showing Ali's ball could have hit leg stump. He went on to score 19.

Chase completed his half-century before he was undone by debutant fast bowler Ubaid, who nipped one back to bowl him.

Sajid then took the last three wickets.

The scores: West Indies 344 in 105.4 overs (Brandon King 46, Justin Greaves 73, Roston Chase 70, Sajid Khan 4/85) vs Pakistan 136/2 in 31 overs (Azan Awaiss 55). **Toss:** WI.

Holding fort: Greaves led West Indies' fightback in the second Test at Queen's Park Oval. AFP

Jersey row: Tirkey slams Hockey India DG, seeks detailed reply to queries

EXCLUSIVE

Uthra Ganesan
NEW DELHI

The jersey controversy in Indian hockey has now developed into a full-blown internal battle with Hockey India president Dilip Tirkey taking strong exception to the less-than-satisfactory response on his notice seeking details on the uniform change.

Tirkey had earlier sought an explanation on the process and basis for the change from HI Director General Cdr. R.K. Srivastava, who had claimed that such operational decisions were not brought before the Executive Board earlier as well. Tirkey has now shot back and, on Monday, directed Srivastava to file a point-by-point response to the objections raised in a fresh mail addressed to all Executive Board members, a copy of which is with *The Hindu*.

Declaring that "Hockey India does not own Indian hockey. We are trustees and custodians of a National sporting legacy," he directed Srivastava to respond latest by Tuesday, adding that "A response consisting only of general explanations or assertions

Tirkey. FILE PHOTO: M. VEDHAN

without supporting documentary evidence will not enable the Executive Board to discharge its constitutional responsibilities."

Questioning under whose authority the decision to change was taken, Tirkey asked Srivastava to provide the specific authority, approval or delegation under which the decision to change the official jersey was taken, timeline of the change, names, designations and roles of every person involved in the process and copies of all internal correspondence relating to the decision.

Tirkey wrote, "Please clarify whether the potential impact of the change on athlete's preparation, confidence, comfort, mental focus and competition readiness was assessed. Further, members of the

men's National team were required to address questions relating to the jersey change in the media immediately before the World Cup. Please clarify whether the possible impact of this situation on athlete's focus, mental preparation and tournament readiness was assessed before the announcement."

He has also asked for details of the players and team staff consulted, the feedback and documentary evidence of the same and details of any testing conducted before the kit was officially introduced.

The mail also aims to mark clear boundaries in the roles and powers of the elected members of the federation and appointed employees.

"The Hockey India Bye-Laws establish a governance structure under which the elected bodies of Hockey India are responsible for the governance, policy direction and overseeing the Federation.

"The Director General has an important executive and administrative role. However, administrative responsibility cannot be interpreted as replacing or overriding the authority of the elected governance bodies," he further wrote.

A ND-NDE

Devyanshi Bihani

Taipei is the city of Tai Tzu-ying. For more than a decade, the former World No. 1 turned badminton into theatre, delighting spectators with strokes that seemed to bend geometry and deception that left opponents frozen.

On Sunday, the tournament found another teenage champion who left Taipei with a place in its history. At 17 years and 222 days, Tanvi Sharma became the youngest Taipei Open champion since Tzu-ying, who won the title at 18 years and 85 days.

It was a fitting coincidence. For much of the week, Tanvi's badminton too was defined not by brute force alone but by exquisite timing, late deception and a striking ease of shot-making that belied her age.

She defeated Vietnam's Thuy Linh Nguyen 21-16, 21-16 in the final to lift her maiden BWF World Tour Super 300 title. Before soaking up the applause, she slipped her gold medal off her neck and placed it around coach Park Tae-sang's neck. Later, the South Korean revealed that there had been moments when he had wondered whether he should leave India, but said Tanvi's victory had given him "another powerful source of motivation to keep moving forward" after more than four years without a title.

Next gen

Indian badminton has been searching for the next leading woman ever since Saina Nehwal and P.V. Sindhu transformed the sport in the country. Every promising teenager has inevitably been measured against the two Olympic medallists.

But breakthroughs are remembered not just for the trophies, but for the style they reveal. Long before titles accumulate, the finest players develop an identity. Taipei offered the first clear glimpse of Tanvi's. If Saina's game was built on relentless pace and Sindhu's on imposing physicality and steep cross-court smashes, Tanvi's greatest weapon may well be her timing.

The shuttle seems to leave her racquet a fraction later than expected, making her intentions harder to read. Her drops and smashes emerge from nearly identical preparation. Opponents find themselves moving backwards, only to be dragged sharply forward. Even when rallies appear routine, she possesses the ability to inject sudden pace with a wristy straight smash or produce a delicate net shot that catches the opponent leaning the wrong way.

Those qualities were on full display throughout the week in the Taiwanese capital. Tanvi opened her campaign by defeating compatriot Tasnim Mir 21-16, 22-20 before overcoming Indonesia's Titis Rahayu Widyawan 21-17, 22-20 in the second round. In both matches, the second game went down to the wire, with the teenager refusing to let tight scorelines alter her attacking instincts.

The level of opposition only grew tougher thereafter. In the quarterfinals, Tanvi stunned fourth seed Supanida Katethong of Thailand 21-15, 18-21, 21-14 before producing one of her most commanding performances of the week in the semifinal.

Facing local favourite Huang Yu-Hsun, ranked 10 places above her, Tanvi barely allowed the Taiwanese shuttler to settle, winning 21-17, 21-11. Her deceptive pushes to the back line, cross-court smashes and deft forecourt play repeatedly left Huang rooted, while a brief wobble late in the opening game proved little more than a passing interruption in an otherwise dominant display.

Against Nguyen in the final, Tanvi repeatedly opened up the court by concealing her drops with the same action as her smash before unleashing steep winners from either flank. She raced to a 10-2 lead in the opening game, repeatedly wrong-footing the experienced Vietnamese with deft touches at the net and powerful strokes.

The scoreline, however, does not fully capture the match.

Like many gifted teenagers, Tanvi occasionally allowed brilliance and impatience to coexist. A flurry of

A fraction late, a step ahead

Indian badminton has waited years for its next great identity after Saina and Sindhu. In Taipei, Tanvi's timing and disguise offered the clearest answer yet

The transition from junior promise to senior consistency is one of the toughest in the sport. India has produced gifted juniors before only to discover that success at higher levels demands far greater physical endurance, tactical discipline and mental resilience than talent alone can provide

BIG LEAP: Tanvi, a silver medallist in the World junior tournament at Guwahati last year, is basking in glory through her senior exploits in Taipei now. FILE PHOTO: RITU RAJ KONWAR

unforced errors allowed Nguyen to close the gap to 10-8 in the opening game before Tanvi steadied herself to take it 21-16. The second game began with the Indian trailing 0-3, but she quickly wrested back control to lead 8-4 and later 15-8, mixing her trademark smash with clever deception at the net. There were brief lapses again, but Tanvi repeatedly produced moments of quality at crucial junctures, refusing to allow Nguyen's comeback to gather momentum to close out another 21-16 victory.

It is perhaps this blend of audacity and vulnerability that makes her game so compelling. That balance is quite unusual for a player still only 17. More importantly, her mistakes never dented

her confidence to stay on the front foot. Even though she admitted to feeling nervous during the tournament, Tanvi continued trusting the strokes that had carried her into the final rather than retreating into safety.

"I was quite nervous, but I just thought I would give my 100%," she said. That composure was built alongside coach Park Tae-sang, who has added focus to her explosive strokeplay. "I'm very happy to win this title. I didn't expect to win a title here. I just thought I'd give my best. So I was going step by step, match by match."

Beyond the title

The triumph also places her among an exclusive group of Indian women to have won a BWF World Tour Super 300 title, joining Saina, Sindhu and Devika Sihag. More importantly, it comes at an opportune moment, with the BWF World Championships in New Delhi later this month.

The transition from junior promise to senior consistency is one of the toughest in the sport. India has produced gifted juniors before, only to discover that success at higher levels demands far greater physical endurance, tactical discipline and mental resilience than talent alone can provide.

Tanvi's own journey already reflects that progression. A former World Junior No. 1, she became the first Indian to win two medals at a single edition of the World Junior Championships, claiming silver in girls' singles and bronze in the mixed team event. She reached the final of the U.S. Open Super 300 last year, finished runner-up at the Odisha Masters and Guwahati Masters, and was part of India's historic Asian Team Championships triumph.

Taipei was not an overnight

breakthrough. It was another milestone on a steadily rising trajectory.

There will inevitably be tougher tests ahead. Tanvi knows that better than anyone. Even after lifting the biggest title of her young career, she spoke less about the triumph than the effort it took to get there. "It was pretty hard for me as well, playing five matches. I just needed to be consistent," she said, before adding that she still needed to "work harder" to compete regularly at the Super 500 and Super 750 level.

'A special player'

Sindhu, one of only three other Indian women to have won a BWF World Tour Super 300 title, perhaps summed it up best. Congratulating Tanvi on social media, the two-time Olympic medallist wrote that the teenager had "all the ingredients to become a very special player", praising her talent, stroke-making and courage to take on the best.

The ingredients are certainly there. Natural timing cannot be taught. Neither can the instinct to disguise strokes until the last possible moment or the confidence to attack under pressure. Sindhu added that stability and experience had been the only missing pieces, calling the Taipei triumph "just the beginning" for one of Indian badminton's brightest young prospects.

Moreover, Taipei has long had a habit of revealing special talents. Saina won the title there in 2008 before going on to redefine Indian badminton. Tzu-ying, the hometown favourite, also announced herself there as a teenager before redefining what artistry on a badminton court could look like. Tanvi's journey is only beginning, but her victory carried echoes of both - Saina's fearless ambition and Tzu-ying's genius for deception and timing.

THE GIST

Tanvi became the youngest Taipei Open champion since Tzu-ying, winning her maiden BWF World Tour Super 300 title at just 17 years and 222 days

The title ended an 18-year wait for an Indian women's singles champion at the Taipei Open after Saina's triumph in 2008

Tanvi negotiated a demanding draw, beating fourth seed Katethong, local favourite Yu-Hsun and Vietnam's Thuy Linh to lift the title

With the BWF World Championships in New Delhi later this month, the breakthrough offers a timely confidence boost as Tanvi prepares for the biggest test of her senior career

Golden moment: Tanvi wrapped the yellow metal around coach Tae-sang's neck after the triumph.

You get better care when you stop nodding and start asking why

Medical schools teach budding doctors to prevent disease, minimise risk, and, when in doubt, to investigate — whereas what you want out of treatment may be vastly different; when this is not discussed, a mismatch in expectations can develop, resulting in a trust deficit and disappointment

Narayana Subramaniam

Priya walks into an orthopaedician’s clinic with knee pain that she says she has had for three months. The doctor spends eight minutes with her, orders an MRI, and asks her to come back with the images.

MRI shows signs of early osteoarthritis. The doctor lists three options: injections, physiotherapy or wait and watch. Priya nods, does not ask why she needed an MRI when the doctor could have examined her knee, and does not ask what ‘early osteoarthritis’ actually means or what happens if she does nothing. She opts for injections because of how she thought the doctor said it – some inflection and tone.

Six months and four injections later, she has spent ₹15,000 but her pain is back. She is wondering if she got scammed, and if injections were ever the right call.

Priya was probably not scammed – but she made a decision about her body without understanding it. She did not know that she could have asked questions and she did not know that the doctor was not sure either.

Medicine is not certainty

You are taught that doctors discover diagnoses, that there is always a right answer, and that diagnoses are always objective. They are not. When the orthopaedician looked at Priya’s knee, he was thinking that the probability of osteoarthritis was 40%, a meniscal tear 30%, a muscle strain 20% and in fact a 10% chance it was something else. He did not know for certain; his estimates were based on knowledge and experience, and probably what his last 10 patients had.

The MRI showed signs of arthritis – but arthritis on imaging does not always mean it is also the cause of pain. Plenty of people have degenerative changes and feel nothing while an equal number have almost no changes and have terrible pain. Instead, the orthopaedician interpreted the image, made an educated guess, and advised treatment.

Another doctor might have looked at the same image and said, “Wait. Let us see if physiotherapy helps first.” A third doctor might have said, “This is asymptomatic degeneration. Leave it alone.”

None of them would be objectively wrong. They are all interpreting the same evidence differently based on their experience, training, risk tolerance, and – honestly – how busy their practice is and what procedures they are equipped to do.

This is clinical medicine. It is not a process of discovery. It is almost always going to be a series of educated guesses filtered through a doctor’s particular worldview.

And once you understand this, you realise something: if there is no objective right answer, you need to have a say in the decision. Your life is not the doctor’s life. Your pain tolerance is not theirs. Your willingness to spend ₹15,000 on injections is not theirs.

On different tracks

Doctors are trained to approach illness in a particular way – whereas what you want out of treatment may be vastly different. When this is not discussed, a

You are taught that doctors discover diagnoses, that there is always a right answer, and that diagnoses are always objective. They are not. ISTOCKPHOTO

large mismatch in expectations can develop, resulting in a trust deficit and ultimately disappointment.

Medical schools teach budding doctors to prevent disease, minimise risk, and, when in doubt, to investigate. This makes sense if you have seen someone die of a missed diagnosis. The goal becomes to not miss anything, ever.

The orthopaedician was thinking: arthritis found, need to prevent progression, imaging confirms it, treat aggressively. Priya was thinking: my knee hurts, what is the quickest solution? One of them is inevitably frustrated and dissatisfied.

This happens every day in Indian hospitals. A doctor sees borderline blood pressure and recommends medication. Patient thinks: I feel fine, I do not need this. Both are right. Both are wrong. That is because they are having two separate conversations.

Crucially, the system does not teach doctors to fix this. As a patient, you can respond by asking questions.

A good patient

To be a good patient: First, demand clarity on usefulness. Ask “what will this tell us that changes my treatment?”, “what happens if it is normal?”, “what happens if it is abnormal?”, “how will you use this information?”, and “what are the guidelines to treat this?”.

Why? A doctor who can answer gets to keep your trust. But if the doctor dodges or gets irritated, you now know something important about how they practice.

Second, insist on options. Even

You know your body and yourself. The doctor knows medicine. Both of you are necessary to make a good decision. Making an informed choice is always better than a compliant one

osteoarthritis does not have just one treatment. The options include observation, physiotherapy, medications, injections, and surgery.

Why? A doctor operating in good faith might say, “We could try A, which works for some people but has risks, or B, which is safer but might not work. What matters more to you?”

Third, interrupt when you are confused. Do not nod and leave confused. Say “I did not follow that. Please explain it differently.”

Why? Doctors do not mind. They would rather know and try again than have you leave thinking you understood.

One important question

Before any major treatment, ask: “What would you do if this was your mother?”

The answer is often different from what the doctors are recommending for you. This does not mean they are being unethical; it often means something else. Maybe they do not know your full picture: your job, your life, your ability to cope with side effects. With their mother, they know all of it. Or maybe they are being more cautious with their mother not because it is better medicine but because emotion changes judgment. Or maybe they realise there are actually multiple

valid approaches and they have been presenting one option like it is the easiest one.

Your doctor knows there are choices – and they may have recommended one for reasons they have not explained. So Priya could have asked, “If this was your mother’s knee, would you do four injections over six months?” The likely reply: “No. I would try physiotherapy first, and injections if that does not work.”

When you are still suffering

You followed the plan. You are compliant, you are taking your medicines, doing your exercises, and generally doing what you were told. Nothing is working. In these circumstances, you should have a different conversation, e.g.: “I am following your plan but not getting better. What does that mean?”

Do not think you are accusing the doctor; you are simply investigating. Maybe the diagnosis was wrong, you need to wait longer, you need surgery or something else. You and your doctor need to figure it out together.

Stop thinking your job is to obey. You know your body and yourself. The doctor knows medicine. Both of you are necessary to make a good decision. Making an informed choice is always better than a compliant one. It will also improve doctor-patient relations. As much as you deserve a good doctor, doctors also deserve good patients.

A Greece Air Force Canadair CL-415GR water bomber aircraft drops water over a forest fire. AFP

Water-bombing aircraft helps Greece battle wildfires

Agence France Presse

Water-bombing aircraft resumed firefighting operations in Greece on Monday after winds eased, joining hundreds of firefighters battling multiple blazes that have already claimed five lives.

Greece, which had largely avoided major blazes at the start of the summer unlike France and Spain, is now grappling with a second consecutive week of wildfires that have scorched thousands of hectares of forest, scrubland and farmland.

“Today we are facing three difficult fronts: Psatha, Kryo Pigadi and Kandyli,” a department spokesperson said, referring to areas located between 45 and 70 kilometres west of Athens.

Lighter winds allowed aerial firefighting operations to resume early on Monday, with nine water-bombing aircraft joining nine helicopters and about 450 firefighters battling the flames in the regions of Boeotia and Attica, according to the fire service.

Lighter winds allowed aerial firefighting operations to resume early on Monday, with nine water-bombing aircraft joining nine helicopters and about 450 firefighters battling the fires

In recent days, wind gusts reaching 80 kilometres per hour had grounded aircraft for safety reasons, hampering firefighting efforts. Authorities ordered new evacuations on Monday morning in villages near Kandyli, about 45 kilometres west of the capital, Greece’s Civil Protection agency said.

“The battle against the fires is uneven,” Deputy Minister for Civil Protection and Climate Crisis Kostas Katsafados told public broadcaster ERTNews on Monday.

The wildfires have claimed five lives since last week. On Sunday, two Bell helicopters collided while conducting firefighting operations near Psatha. A Danish pilot and a Greek co-pilot aboard one of the aircraft were killed. Their deaths followed those of three firefighters who died last week while battling separate wildfires in Crete and the Peloponnese.

‘Extremely difficult’

Prime Minister Kyriakos Mitsotakis warned that Greece faced “extremely difficult” days ahead, as high temperatures and dry conditions continued to fuel the blazes. More than 12,000 hectares of forest and agricultural land have burned over the past week, according to analyses from the European Union’s Copernicus Earth observation programme cited by local media.

Greece, like much of the Mediterranean region, has experienced increasingly frequent and intense wildfires that scientists link to climate change.

Pending the outcome of an official investigation, all Bell helicopters deployed to the firefighting operation have been grounded, public broadcaster ERT reported. The helicopters were leased from Australia’s McDermott Aviation as part of a fleet of 15 aircraft. The company said it has supported operations in Greece for the past seven years.

Police have arrested two employees of an electricity utility company in connection with one of the fires, which investigators believe may have been sparked on Friday by an electrical cable near the coastal village of Porto Germeno.

At the height of the tourist season, authorities warned that the wildfire threat would remain “very high” on Monday.

Civil Protection placed Attica, which surrounds the capital, and neighbouring Boeotia at level four on a five-point fire danger scale.

THE SCIENCE QUIZ

The chemistry of champagne and wine

Vasudevan Mukunth

QUESTION 1

Champagne is a kind of sparkling wine produced in the Champagne region of France. Name the Benedictine monk sometimes credited with inventing it on this day, August 4, in 1693. This history is not clear, however, although this monk also made well-known contributions to the quality of sparkling wine.

QUESTION 2

The process of making champagne and that of wiping the glasses it is served in leaves behind small _____ fibres. These fibres trap carbon dioxide, which later grow to become the bubbles in the liquid. Fill in the blank with the name of a material made of long chains of glucose.

QUESTION 3

When the cork of a champagne bottle is released, the gas escaping via the bottle’s neck briefly exceeds the speed of sound, producing a shockwave that is often indirectly visible in high-speed photography as a small X cloud. Name X, a process whereby water vapour cools and condenses.

QUESTION 4

The colour of red sparkling wine comes from pigment molecules in the skins of grapes called _____. Red wine gets its colour from fermenting juice with the skins on while white wine – even from red grapes – is typically pressed before coming in contact with the skin. Fill in the blank.

QUESTION 5

When wine is exposed to oxygen, it reacts

VISUAL:

Name the ‘tears of wine’ effect depicted here. It happens because at the surface, alcohol evaporates faster than water, creating a surface tension gradient that pulls liquid up in small rivulets. FLAGSTEWARD (CC BY-SA)

with compounds like tannins and volatile sulphur compounds, softening its harsh notes and releasing aromatic Y. Name Y, a compound made of an acid and an alcohol, known for its sweet smells.

Answers to July 30 quiz:

- Planet whose debris saps the strength of its natives – **Ans: Krypton, kryptonite**
 - Synthetic alloy that’s indestructible one it has cooled – **Ans: Adamantium**
 - Light, tough metal mined in the Misty Mountains – **Ans: Mithril**
 - Room-temperature superconductor that can levitate mountains – **Ans: Unobtainium**
 - Crystalline substance that mutates organisms, releases minerals – **Ans: Tiberium**
- Visual: Dilithium**
